Source	<code>&lt;xsd:element name="ResourceHeader" type="ResourceHeader" /&gt;</code>

## Element ResourceName

Namespace	http://impexfp7.oeaw.ac.at
Annotations	A short textual description of a resource which may be useful when read by a person.
Diagram	<p>A short textual description of a resource which may be useful when read by a person.</p> <p>Built-in primitive type. The string datatype represents character strings in XML.</p>
Type	xsd:string
Properties	content: simple
Used by	Complex Type ResourceHeader
Source	<pre>&lt;xsd:element name="ResourceName" type="xsd:string"&gt;   &lt;xsd:annotation&gt;     &lt;xsd:documentation xml:lang="en"&gt;A short textual description of a resource which may be useful when read by a person.&lt;/xsd:documentation&gt;   &lt;/xsd:annotation&gt; &lt;/xsd:element&gt;</pre>

## Element AlternateName

Namespace	http://impexfp7.oeaw.ac.at
Annotations	An alternative or shortened name used to refer to a resource. This includes acronyms, expanded names or a synonym for a resource.
Diagram	<p>An alternative or shortened name used to refer to a resource. This includes acronyms, expanded names or a synonym for a...</p> <p>Built-in primitive type. The string datatype represents character strings in XML.</p>
Type	xsd:string
Properties	content: simple
Used by	Complex Type ResourceHeader
Source	<pre>&lt;xsd:element name="AlternateName" type="xsd:string"&gt;   &lt;xsd:annotation&gt;     &lt;xsd:documentation xml:lang="en"&gt;An alternative or shortened name used to refer to a resource. This includes acronyms, expanded names or a synonym for a resource.&lt;/xsd:documentation&gt;   &lt;/xsd:annotation&gt; &lt;/xsd:element&gt;</pre>

## Element ReleaseDate

Namespace	http://impexfp7.oeaw.ac.at
Annotations	The date and time when a resource is made available. The availability of a resource coincides with the release of a resource description. If the Release Date is specified as a future date then it indicates that resource should not be made available until that time. However, this is only advisory and in practice the Release Date should be the actual date the resource description was published.
Diagram	<p>The date and time when a resource is made available. The availability of a resource coincides with the release of a...</p> <p>Built-in primitive type. The dateTime datatype represents a specific instant of time.</p>
Type	xsd:dateTime
Properties	content: simple

Used by	Complex Types	Granule, ModelVersion, Person, ResourceHeader
Source		<pre>&lt;xsd:element name="ReleaseDate" type="xsd:dateTime"&gt;   &lt;xsd:annotation&gt;     &lt;xsd:documentation xml:lang="en"&gt;The date and time when a resource is made available. enumeration	AVI	Audio Video Interleave (AVI) a digital format for movies that conforms to the Microsoft Windows Resource Interchange File Format (RIFF).																																																
enumeration	Binary	A direct representation of the bits which may be stored in memory on a computer.																																																
enumeration	CDF	Common Data Format (CDF). A binary storage format developed at Goddard Space Flight Center (GSFC).																																																
enumeration	CEF	Cluster Exchange Format (CEF) is a self-documenting ASCII format designed for the exchange of data. There are two versions of CEF which are not totally compatible.																																																
enumeration	CEF1	Cluster Exchange Format (CEF), version 1, is a self-documenting ASCII format designed for the exchange of data. The metadata contains information compatible with the ISTP recommendations for CDF.																																																
enumeration	CEF2	Cluster Exchange Format (CEF), version 2, is a self-documenting ASCII format designed for the exchange of data and introduced for Cluster Active Archive. Compared to version 1, the metadata description of vectors and tensors is different.																																																
enumeration	Excel	A Microsoft spreadsheet format used to hold a variety of data in tables which can include calculations.																																																
enumeration	FITS	Flexible Image Transport System (FITS) is a digital format primarily designed to store scientific data sets consisting of multi-dimensional arrays (1-D spectra, 2-D images or 3-D data cubes) and 2-dimensional tables containing rows and columns of data.																																																
enumeration	GIF	Graphic Interchange Format (GIF) first introduced in 1987 by CompuServe. GIF uses LZW compression and images are limited to 256 colours.																																																
enumeration	HDF	Hierarchical Data Format																																																
enumeration	HDF4	Hierarchical Data Format, Version 4																																																
enumeration	HDF5	Hierarchical Data Format, Version 5																																																
enumeration	HTML	A text file containing structured information represented in the HyperText Mark-up Language (HTML). See < <a href="http://www.w3.org/MarkUp/">http://www.w3.org/MarkUp/</a> >																																																
enumeration	Hardcopy	A permanent reproduction, or copy in the form of a physical object, of any media suitable for direct use by a person.																																																
enumeration	Hardcopy.Film	An image recording medium on which usually a "negative" analog image is registered. A "positive" image can be recovered or reproduced from film, which is usually made of flexible materials for ease of storage and transportation.																																																
enumeration	Hardcopy.Microfiche	A sheet of microfilm on which many pages of																																																

		material have been photographed; a magnification system is used to read the material.
enumeration	Hardcopy.Microfilm	Film rolls on which materials are photographed at greatly reduced size; a magnification system is used to read the material.
enumeration	Hardcopy.Photograph	An image (positive or negative) registered on a piece of photo-sensitive paper
enumeration	Hardcopy.PhotographicPlate	A rigid (typically glass) medium that functions like film. Its rigidity is for guarding against image distortion due to medium deformation (caused by heat and humidity). Photographic plates are often used for astronomical photography.
enumeration	Hardcopy.Print	A sheet of any written or printed material which may include notes or graphics. Multiple printed pages may be bound into a manuscript or book.
enumeration	IDFS	Instrument Data File Set (IDFS) is a set of files written in a prescribed format which contain data, timing data, and meta-data. IDFS was developed at Southwest Research Institute (SwRI).
enumeration	IDL	Interactive Data Language (IDL) save set. IDL is a proprietary format.
enumeration	JPEG	A binary format for still images defined by the Joint Photographic Experts Group
enumeration	MATLAB_4	MATLAB Workspace save set, version 4. MAT-files are double-precision, binary, MATLAB format files. MATLAB is a proprietary product of The MathWorks.
enumeration	MATLAB_6	MATLAB Workspace save set, version 6. MAT-files are double-precision, binary, MATLAB format files. MATLAB is a proprietary product of The MathWorks.
enumeration	MATLAB_7	MATLAB Workspace save set, version 7. MAT-files are double-precision, binary, MATLAB format files. Version 7 includes data compression and Unicode encoding. MATLAB is a proprietary product of The MathWorks.
enumeration	MPEG	A digital format for movies defined by the Motion Picture Experts Group
enumeration	NCAR	The National Center for Atmospheric Research (NCAR) format. A complete description of that standard is given in appendix C of the "Report on Establishment & Operation of the Incoherent-Scatter Data Base", dated August 23, 1984, obtainable from NCAR, P.O. Box 3000 Boulder, Colorado 80307-3000.
enumeration	NetCDF	Unidata Program Center's Network Common Data Form (NetCDF). A self-describing portable data format for array-oriented data access. See < <a href="http://my.unidata.ucar.edu/content/software/netcdf">http://my.unidata.ucar.edu/content/software/netcdf</a> >
enumeration	PDF	A document expressed in the Portable Document Format (PDF) as defined by Adobe.
enumeration	PNG	A digital format for still images. Portable Network Graphics (PNG)
enumeration	Postscript	A page description programming language created by Adobe Systems Inc. that is a device-independent industry standard for representing text and graphics.
enumeration	QuickTime	A format for digital movies, as defined by Apple Computer. See < <a href="http://developer.apple.com/quicktime/">http://developer.apple.com/quicktime/</a> >
enumeration	TIFF	A binary format for still pictures. Tagged Image Format File (TIFF). Originally developed by Aldus and now controlled by Adobe.
enumeration	Text	A sequence of characters which may have an imposed structure or organization.
enumeration	Text.ASCII	A sequence of characters that adheres to American

		Standard Code for Information Interchange (ASCII) which is an 7-bit character-coding scheme.
enumeration	Text.Unicode	Text in multi-byte Unicode format.
enumeration	UDF	Universal Data Format (UDF). The Optical Technology Storage Association's Universal Disk Format, based on ISO 13346. See < <a href="http://www.osta.org/specs/index.htm">http://www.osta.org/specs/index.htm</a> >
enumeration	VOTable	A proposed IVOA standard designed as a flexible storage and exchange format for tabular data.
enumeration	XML	eXtensible Markup Language (XML). A structured format for representing information. See < <a href="http://www.w3.org/XML/">http://www.w3.org/XML/</a> >
Used by	Complex Type	AccessInformation
Source	<pre>&lt;xsd:element name="Format" type="enumFormat"&gt;   &lt;xsd:annotation&gt;     &lt;xsd:documentation xml:lang="en"&gt;The organization of data according to preset specifications. ## Element Units

Namespace	http://impex-fp7.oeaw.ac.at	
Annotations	<p>A description of the standardized measurement increments in which a value is specified. The description is represented as a mathematical phrase. Units should be represented by widely accepted representation. For example, units should conform to the International System of Units (SI) which is maintained by BIPM (Bureau International des Poids et Mesures (see <a href="http://www.bipm.fr/">http://www.bipm.fr/</a>) when appropriate or use tokens like "Re" to represent units of the Radius of the Earth. Within a phrase the circumflex (^) is used to indicate a power, a star (*) is used to indicate multiplication and a slash (/) division. When symbols are not separated by a mathematical operator, multiplication is assumed. Symbols for base units can be found at: <a href="http://www.bipm.fr/en/si/si_brochure/chapter2/2-1/#symbols">http://www.bipm.fr/en/si/si_brochure/chapter2/2-1/#symbols</a> and those for common derived units can be found at: <a href="http://www.bipm.fr/en/si/derived_units/2-2-2.html">http://www.bipm.fr/en/si/derived_units/2-2-2.html</a></p>	
Diagram	<p>The diagram shows a UML class named 'Units' with a multiplicity of 1..* at its end and 'xsd:string' at the other end. A note below the class says: 'A description of the standardized measurement increments in which a value is specified. The description is represented...'.</p> <p>A callout box points to the 'xsd:string' type with the text: 'Built-in primitive type. The string datatype represents character strings in XML.'</p>	
Type	xsd:string

The latter type of observations are often referred to as Interplanetary CME's (ICME's).	enumeration	EITWave	A wave in the corona of the Sun which produce shock waves on the Sun's chromosphere (Moreton Waves). EIT Waves are produced by large solar flare and expand outward at about 1,000 km/s. It usually appears as a slowly moving diffuse arc of brightening in H-alpha, and may travel for several hundred thousand km.	enumeration	EnergeticSolarParticleEvent	An enhancement of interplanetary fluxes of energetic ions accelerated by interplanetary shocks and/or solar flares.	enumeration	ForbushDecrease	A rapid decrease in the observed galactic cosmic ray intensity following the passage of an outwardly convecting interplanetary magnetic field disturbance, such as those associated with large CME's, that sweep some galactic cosmic rays away from Earth.	enumeration	GeomagneticStorm	A magnetospheric disturbance typically defined by variations in the horizontal component of the Earth's surface magnetic field. The variation typically starts with a field enhancement
enumeration	ActiveRegion	A localized, transient volume of the solar atmosphere in which PLAGEs, SUNSPOTS, FACULAE, FLARES, etc. may be observed.																												
enumeration	Aurora	An atmospheric phenomenon consisting of bands of light caused by charged solar particles following the earth's magnetic lines of force.																												
enumeration	BowShockCrossing	A crossing of the boundary between the undisturbed (except for foreshock effects) solar wind and the shocked, decelerated solar wind of the magnetosheath.																												
enumeration	CoronalHole	An extended region of the corona, exceptionally low in density and associated with unipolar photospheric regions. A coronal hole can be an "open" magnetic field in the corona and (perhaps) inner heliosphere which has a faster than average outflow (wind); A region of lower than "quiet" ion and electron density in the corona; or a region of lower peak electron temperature in the corona than in the "quiet" corona.																												
enumeration	CoronalMassEjection	A solar event (CME) that involves a burst of plasma ejected into the interplanetary medium. CME's may be observed remotely relatively near the sun or in situ in the interplanetary medium. The latter type of observations are often referred to as Interplanetary CME's (ICME's).																												
enumeration	EITWave	A wave in the corona of the Sun which produce shock waves on the Sun's chromosphere (Moreton Waves). EIT Waves are produced by large solar flare and expand outward at about 1,000 km/s. It usually appears as a slowly moving diffuse arc of brightening in H-alpha, and may travel for several hundred thousand km.																												
enumeration	EnergeticSolarParticleEvent	An enhancement of interplanetary fluxes of energetic ions accelerated by interplanetary shocks and/or solar flares.																												
enumeration	ForbushDecrease	A rapid decrease in the observed galactic cosmic ray intensity following the passage of an outwardly convecting interplanetary magnetic field disturbance, such as those associated with large CME's, that sweep some galactic cosmic rays away from Earth.																												
enumeration	GeomagneticStorm	A magnetospheric disturbance typically defined by variations in the horizontal component of the Earth's surface magnetic field. The variation typically starts with a field enhancement																												

		associated with a solar wind pressure pulse and continues with a field depression associated with an enhancement of the diamagnetic magnetospheric ring current.
enumeration	InterplanetaryShock	A shock propagating generally anti-sunward through the slower solar wind, often seen in front of CME-associated plasma clouds.
enumeration	MagneticCloud	A transient event observed in the solar wind characterized as a region of enhanced magnetic field strength, smooth rotation of the magnetic field vector and low proton density and temperature.
enumeration	MagnetopauseCrossing	A crossing of the interface between the shocked solar wind in the magnetosheath and the magnetic field and plasma in the magnetosphere.
enumeration	RadioBurst	Emissions of the sun in radio wavelengths from centimeters to dekameters, under both quiet and disturbed conditions. Radio Bursts can be "Type I" consisting of many short, narrow-band bursts in the metric range (300 - 50 MHz); "Type II" consisting of narrow-band emission that begins in the meter range (300 MHz) and sweeps slowly (tens of minutes) toward dekameter wavelengths (10 MHz); "Type III" consisting of narrow-band bursts that sweep rapidly (seconds) from decimeter to dekameter wavelengths (500 - 0.5 MHz); and "Type IV" consisting of a smooth continuum of broad-band bursts primarily in the meter range (300 - 30 MHz).
enumeration	SectorBoundaryCrossing	A sector boundary crossing is a transit by a spacecraft across the heliospheric current sheet separating the dominantly outward (away-from-the-sun) interplanetary magnetic field of one hemisphere of the heliosphere from the dominantly inward (toward-the-sun) polarity of the other hemisphere. Such crossings have multi-day intervals of opposite IMF dominant polarities on either side.
enumeration	SolarFlare	An explosive event in the Sun's atmosphere which produces electromagnetic radiation across the electromagnetic spectrum at multiple wavelengths from long-wave radio to the shortest wavelength gamma rays.
enumeration	SolarWindExtreme	Intervals of unusually large or small values of solar wind attributes such as flow speed and ion density.
enumeration	StreamInteractionRegion	The region (SIR) where two solar wind streams, typically having differing characteristics and solar sources, abut up against (and possibly partially interpenetrate) each other.
enumeration	Substorm	A process by which plasma in the magnetotail becomes energized at a fast rate.

Source	<code>&lt;xsd:element name="ParameterKey" type="ParameterKey"/&gt;</code>

## Element Cadence

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	The time interval between the start of successive measurements.

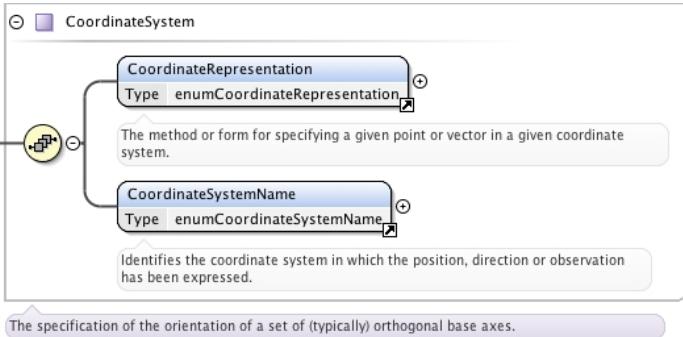

Diagram	
Type	xsd:duration
Properties	content: simple
Used by	Complex Types Parameter, TemporalDescription
Source	<pre>&lt;xsd:element name="Cadence" type="xsd:duration"&gt;   &lt;xsd:annotation&gt;     &lt;xsd:documentation xml:lang="en"&gt;The time interval between the start of successive measurements.&lt;/xsd:documentation&gt;   &lt;/xsd:annotation&gt; &lt;/xsd:element&gt;</pre>

## Element UnitsConversion

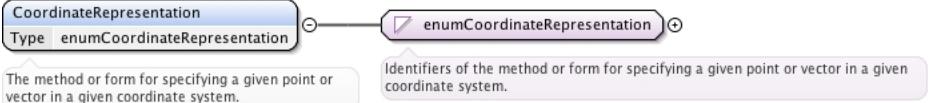

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	The multiplicative factor for converting a unit into International System of Units (SI) units. The factor is expressed in the form "number > x", where "number" is a numerical value and "x" is the appropriate SI units. The basic SI units are Enumerated: m (meter), N (newton), kg (kilogram), Pa (pascal), s (second), Hz (hertz), A (ampere), V (volt), K (kelvin), W (watt), rad (radian), J (joule), sr (steradian), C (coulomb), T (tesla), ohm (ohm), mho (mho or seimens), H (henry), and F (farad). Two useful units which are not SI units are: degree (angle), and unitless (no units). An example is: "1.0E-9>T" which converts the units, presumably nT, to Tesla. Another example is: "1.0e+3>m/s" which converts a velocity expressed in kilometers per second to meters per second.

## Element CoordinateSystemName

Namespace	http://impex-fp7.oeaw.ac.at
-----------	-----------------------------

Annotations	Identifies the coordinate system in which the position, direction or observation has been expressed.	
Diagram	<p>The diagram shows a UML class named "CoordinateSystemName" with a note below it: "Identifies the coordinate system in which the position, direction or observation has been expressed." An association line connects "CoordinateSystemName" to another element labeled "enumCoordinateSystemName". A note above "enumCoordinateSystemName" says: "Identifiers of the origin and orientation of a set of typically orthogonal axes."</p>	
Type	enumCoordinateSystemName	
Properties	content: simple	
Facets	enumeration	<p>CGM Corrected Geomagnetic - A coordinate system from a spatial point with GEO radial distance and geomagnetic latitude and longitude, follow the epoch-appropriate IGRF/DGRF model field vector through to the point where the field line crosses the geomagnetic dipole equatorial plane. Then trace the dipole magnetic field vector Earthward from that point on the equatorial plane, in the same hemisphere as the original point, until the initial radial distance is reached. Designate the dipole latitude and longitude at that point as the CGM latitude and longitude of the original point. See &lt;<a href="http://nssdc.gsfc.nasa.gov/space/cgm/cgmm_des.html">http://nssdc.gsfc.nasa.gov/space/cgm/cgmm_des.html</a>&gt;</p>
	enumeration	<p>Carrington A coordinate system which is centered at the Sun and is "fixed" with respect to the synodic rotation rate; the mean synodic value is about 27.2753 days. The Astronomical Almanac gives a value for Carrington longitude of 349.03 degrees at 0000 UT on 1 January 1995.</p>
	enumeration	<p>CSO A generic body-Centered Solar Orbital (CSO) frame related to comets and asteroids. The frame is defined as a two-vector style dynamic frame as follows: The position of the sun relative to the body is the primary vector: the X axis points from the body to the sun. The inertially referenced velocity of the sun relative to the body is the secondary vector: the Y axis is the component of this velocity vector orthogonal to the X axis. The Z axis is X cross Y, completing the right-handed reference frame. All vectors are geometric: no aberration corrections are used.</p>
	enumeration	<p>DM Dipole Meridian - A coordinate system centered at the observation point. Z axis is parallel to the Earth's dipole axis, positive northward. X is in the plane defined by Z and the line linking the observation point with the Earth's center. Y is positive eastward. See &lt;<a href="http://cdpp.cnes.fr/00428.pdf">http://cdpp.cnes.fr/00428.pdf</a>&gt;</p>
	enumeration	<p>GEI Geocentric Equatorial Inertial - A coordinate system where the Z axis is along Earth's spin vector, positive northward. X axis points towards the first point of Aries (from the Earth towards the Sun at the vernal equinox). See Russell, 1971</p>
	enumeration	<p>GEO Geographic - geocentric corotating - A coordinate system where the Z axis is along Earth's spin vector, positive northward. X axis lies in Greenwich meridian, positive towards Greenwich. See Russell, 1971.</p>
	enumeration	<p>GPHIO In this Cartesian coordinate system, X is along the flow direction, Y is along the Ganymede-Jupiter vector, and Z is along the spin axis. These coordinates are analogous to the earth-centered GSE coordinates that relate to the direction of flow of the solar wind onto Earth's environment.</p>

enumeration	GSE	Geocentric Solar Ecliptic - A coordinate system where the X axis is from Earth to Sun. Z axis is normal to the ecliptic, positive northward. See Russell, 1971.
enumeration	GSEQ	Geocentric Solar Equatorial - A coordinate system where the X axis is from Earth to Sun. Y axis is parallel to solar equatorial plane. Z axis is positive northward. See Russell, 1971
enumeration	GSM	Geocentric Solar Magnetospheric - A coordinate system where the X axis is from Earth to Sun, Z axis is northward in a plane containing the X axis and the geomagnetic dipole axis. See Russell, 1971
enumeration	HAE	Heliocentric Aries Ecliptic - A coordinate system where the Z axis is normal to the ecliptic plane, positive northward. X axis is positive towards the first point of Aries (from Earth to Sun at vernal equinox). Same as SE below. See Hapgood, 1992.
enumeration	HCC	Heliocentric Cartesian - A 3-D orthonormal coordinate system that is primarily intended to specify with two dimensions a point on the solar disk. The Z axis points toward the observer. The Y axis lies in the plane defined by the solar spin vector and the Z axis, positive northward. The X axis is perpendicular to the Y and Z axes, positive toward solar west. Standard representation for this system is via the point's x and y values, expressed either as physical distances or as fractions of the solar disk radius.
enumeration	HCI	Heliographic Carrington Inertial.
enumeration	HCR	Heliocentric Radial - A 3-D orthonormal coordinate system that is primarily intended to specify with two dimensions a point on the solar disk. The Z axis points toward the observer. The Y axis lies in the plane defined by the solar spin vector and the Z axis, positive northward. The X axis is perpendicular to the Y and Z axes, positive toward solar west. Standard representation for this system is via the point's distance rho from the Z axis [ $\rho = \sqrt{x^2 + y^2}$ ] and its phase angle psi measured counterclockwise from the +Y axis [ $\psi = \arctan(-y/x)$ ]
enumeration	HEE	Heliocentric Earth Ecliptic - A coordinate system where the Z axis is normal to the ecliptic plane, positive northward. X axis points from Sun to Earth. See Hapgood, 1992
enumeration	HEEQ	Heliocentric Earth Equatorial - A coordinate system where the Z axis is normal to the solar equatorial plane, positive northward. X axis is generally Earthward in the plane defined by the Z axis and the Sun-Earth direction. See Hapgood, 1992.
enumeration	HG	Heliographic - A heliocentric rotating coordinate system where the Z axis is normal to the solar equatorial plane, positive northward. X, Y axes rotate with a 25.38 day period. The zero longitude (X axis) is defined as the longitude that passed through the ascending node of the solar equator on the ecliptic plane on 1 January, 1854 at 12 UT. See <a href="http://nssdc.gsfc.nasa.gov/space/helios/coor_des.html">http://nssdc.gsfc.nasa.gov/space/helios/coor_des.html</a>
enumeration	HGI	Heliographic Inertial - A heliocentric coordinate system where the Z axis is normal to the solar equatorial plane, positive northward. X axis is along the intersection line between solar equatorial and ecliptic planes. The X axis was positive at SE longitude of 74.367 deg on Jan 1, 1900. (See SE below.) See <a href="http://nssdc.gsfc.nasa.gov/space/helios/coor_des.html">http://nssdc.gsfc.nasa.gov/space/helios/coor_des.html</a>
enumeration	HPC	Helioprojective Cartesian = A 3-D orthonormal (left-handed) coordinate system that is primarily

		intended to specify with two dimensions a point on the solar disk. The Z axis points from the observer to the center of the solar disk. The Y axis lies in the plane defined by the solar spin vector and the Z axis, positive northward. The X axis is perpendicular to the Y and Z axes, positive toward solar west. Given as the distance between the observer and the center of the solar disk, the standard representation of an (x,y) point on the solar disk is via the point's longitude angle [ $\arctan(x/d)$ ] and latitude angle [ $\arctan(y/d)$ ].
enumeration	HPR	Helio-projective Radial - A 3-D orthonormal (left-handed) coordinate system that is primarily intended to specify with two dimensions a point on the solar disk. The Z axis points from the observer to the center of the solar disk. The Y axis lies in the plane defined by the solar spin vector and the Z axis, positive northward. The X axis is perpendicular to the Y and Z axes, positive toward solar west. Given as the distance between the observer and the center of the solar disk, the standard representation for this system of an (x,y) point on the solar disk is via the point's latitude angle theta [= $\arctan(\sqrt{x^2 + y^2}/d)$ ] or equivalent declination parameter delta (= theta - 90 deg), and its phase angle psi as measured counter-clockwise from the +Y axis [psi = $\arctan(-y/x)$ ].
enumeration	HSM	TBD
enumeration	J2000	An astronomical coordinate system which uses the mean equator and equinox of Julian date 2451545.0 TT (Terrestrial Time), or January 1, 2000, noon TT. (aka J2000) to define a celestial reference frame.
enumeration	JSM	Jovian Solar Magnetospheric - A coordinate system where the X axis is from Jupiter to Sun, Z axis is northward in a plane containing the X axis and the Jovian dipole axis.
enumeration	JSO	Coordinate System Related to Jupiter Jovian Solar Orbital (X anti-sunward, Y along the orbital velocity direction)
enumeration	KSM	Kronian Solar Magnetospheric - A coordinate system where the X axis is from Saturn to Sun, Z axis is northward in a plane containing the X axis and the Kronian dipole axis.
enumeration	KSO	Coordinate System Related to Saturn Kronian Solar Orbital (X anti-sunward, Y along the orbital velocity direction)
enumeration	LGM	Local Geomagnetic - A coordinate system used mainly for Earth surface or near Earth surface magnetic field data. X axis northward from observation point in a geographic meridian. Z axis downward towards Earth's center. In this system, H (total horizontal component) = $\sqrt{B_x^2 + B_y^2}$ and D (declination angle) = $\arctan(B_y/B_x)$
enumeration	MAG	Geomagnetic - geocentric. Z axis is parallel to the geomagnetic dipole axis, positive north. X is in the plane defined by the Z axis and the Earth's rotation axis. If N is a unit vector from the Earth's center to the north geographic pole, the signs of the X and Y axes are given by Y = N x Z, X = Y x Z.. See Russell, 1971, and < <a href="http://cdpp.cnes.fr/00428.pdf">http://cdpp.cnes.fr/00428.pdf</a> >
enumeration	MFA	Magnetic Field Aligned - A coordinate system spacecraft-centered system with Z in the direction of the ambient magnetic field vector. X is in the plane defined by Z and the spacecraft-Sun line, positive sunward. See < <a href="http://cdpp.cnes.fr/00428.pdf">http://cdpp.cnes.fr/00428.pdf</a> >
enumeration	MSO	Mars or Mercury Solar Orbital coordinate system. The X axis points from the center of the planet to the Sun;

		<p>the Z axis is perpendicular to the orbital plane of the planet and parallel to the angular momentum vector. The Y axis completes the right-handed coordinate system.</p>
enumeration	RTN	Radial Tangential Normal. Typically centered at a spacecraft. Used for IMF and plasma V vectors. R (radial) axis is radially away from the Sun, T (tangential) axis is normal to the plane formed by R and the Sun's spin vector, positive in the direction of planetary motion. N (normal) is $R \times T$ .
enumeration	SC	Spacecraft - A coordinate system defined by the spacecraft geometry and/or spin. Often has Z axis parallel to spacecraft spin vector. X and Y axes may or may not corotate with the spacecraft. See SR and SR2 below.
enumeration	SE	Solar Ecliptic - A heliocentric coordinate system where the Z axis is normal to the ecliptic plane, positive northward. X axis is positive towards the first point of Aries (from Earth to Sun at vernal equinox). Same as HAE above. See < <a href="http://nssdc.gsfc.nasa.gov/space/helios/coor_des.html">http://nssdc.gsfc.nasa.gov/space/helios/coor_des.html</a> >
enumeration	SM	Solar Magnetic - A geocentric coordinate system where the Z axis is northward along Earth's dipole axis, X axis is in plane of z axis and Earth-Sun line, positive sunward. See Russell, 1971.
enumeration	SR	Spin Reference - A special case of a Spacecraft (SC) coordinate system for a spinning spacecraft. Z is parallel to the spacecraft spin vector. X and Y rotate with the spacecraft. See < <a href="http://cdpp.cnes.fr/00428.pdf">http://cdpp.cnes.fr/00428.pdf</a> >
enumeration	SR2	Spin Reference 2 - A special case of a Spacecraft (SC) coordinate system for a spinning spacecraft. Z is parallel to the spacecraft spin vector. X is in the plane defined by Z and the spacecraft-Sun line, positive sunward. See < <a href="http://cdpp.cnes.fr/00428.pdf">http://cdpp.cnes.fr/00428.pdf</a> >
enumeration	SSE	Spacecraft Solar Ecliptic - A coordinate system used for deep space spacecraft, for example Helios. - X axis from spacecraft to Sun. Z axis normal to ecliptic plane, positive northward. Note: Angle between normals to ecliptic and to Helios orbit plane ~ 0.25 deg.
enumeration	SSE_L	Selenocentric Solar Ecliptic. The X axis points from the center of the Earth's moon to the sun, the Z axis is normal to the ecliptic plane, positive northward. And the Y axis completes the right-handed set of axes.
enumeration	SpacecraftOrbitPlane	A coordinate system where X lies in the plane normal to and in the direction of motion of the spacecraft, Z is normal to this plane and Y completes the triad in a right-handed coordinate system.
enumeration	TIIS	In this Cartesian coordinate system, X is along the flow direction, Y is along the Titan-Saturn vector, and Z is along the spin axis. These coordinates are analogous to the earth-centered GSE coordinates that relate to the direction of flow of the solar wind onto Earth's environment.
enumeration	VSO	Venus Solar Orbital coordinate system. The X axis points from the center of the planet to the Sun; The Z axis is perpendicular to the orbital plane of the planet and parallel to the angular momentum vector. The Y axis completes the right-handed coordinate system.
enumeration	WGS84	The World Geodetic System (WGS) defines a

		reference frame for the earth, for use in geodesy and navigation. The WGS84 uses the zero meridian as defined by the Bureau International de l'Heure.

Source	<pre>&lt;xsd:element name="Structure" type="Structure" /&gt;</pre>

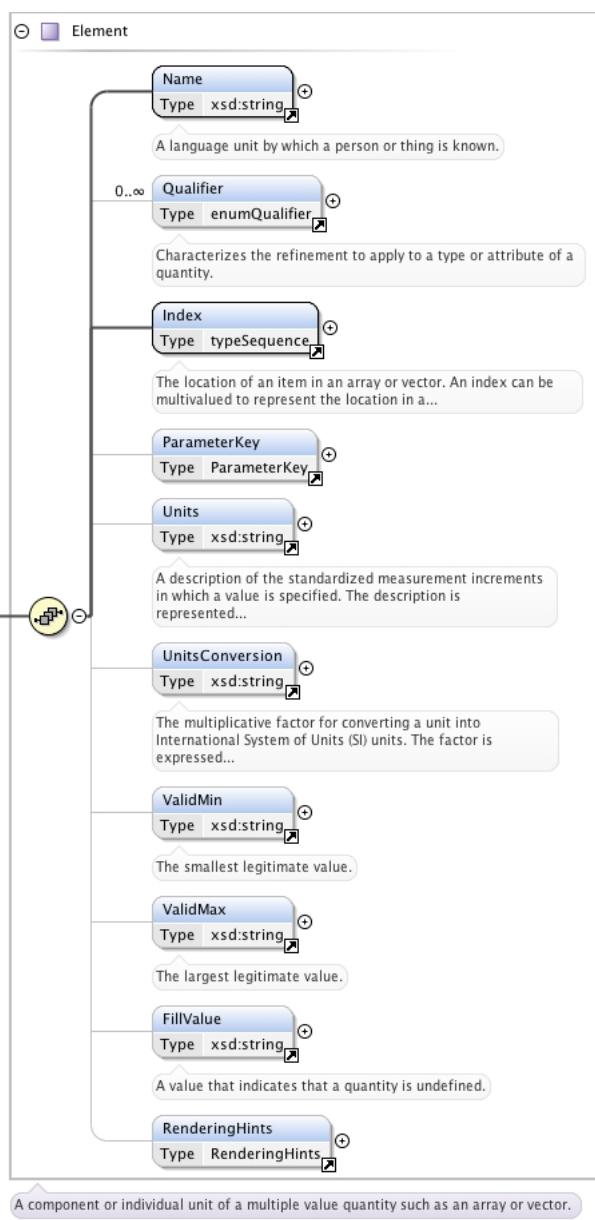

## Element Size

Namespace	http://impexfp7.oeaw.ac.at
Annotations	<p>The number of elements in each dimension of a multi-dimensional array. A scalar has a size of 1. A multi-dimensional vector will have a size for each dimension. Note that the number of elements in the size of an N-dimensional array conveys the array's dimensionality while the product of those numbers conveys the total number of elements in the array. When size is used to describe a tensor it is the number of elements in the tensor. As such it has a limited set of values. A tensor of rank 1 has a size of 3, rank 2 a size of 9, rank 3 a size of 27 and rank n a size of <math>3^n</math>.</p>
Diagram	<pre> classDiagram     class Size {         &lt;&lt;Type typeSequence&gt;&gt;     }     class typeSequence     Size "1" --&gt; "1" typeSequence </pre> <p>The number of elements in each dimension of a multi-dimensional array. A scalar has a size of 1. A multi-dimensional...</p>

## Element Qualifier

Namespace	http://impexfp7.oeaw.ac.at		
Annotations	Characterizes the refinement to apply to a type or attribute of a quantity.		
Diagram	<pre> classDiagram     class Qualifier {         &lt;&lt;Qualifier&gt;&gt;         &lt;&lt;Type&gt;&gt;         &lt;&lt;enumQualifier&gt;&gt;     }     class enumQualifier {         &lt;&lt;Identifiers for terms which refine the type or attribute of a quantity.&gt;&gt;     }     Qualifier "0..1" -- "0..*" enumQualifier   </pre>	Identifiers for terms which refine the type or attribute of a quantity.	
Type	enumQualifier		
Properties	content: simple		
Facets	enumeration	Anisotropy	Direction-dependent property.
		Array	A sequence of values corresponding to the elements in a rectilinear, n-dimension matrix. Each value can be referenced by a unique index.
		Average	The statistical mean; the sum of a set of values divided by the number of values in the set.
		Characteristic	A quantity which can be easily identified and measured in a given environment.
		Circular	Relative to polarization, right-hand circularly polarized light is defined such that the electric field is rotating clockwise as seen by an observer towards whom the wave is moving. Left-hand circularly polarized light is defined such that the electric field is rotating counterclockwise as seen by an observer towards whom the wave is moving. The polarization of magnetohydrodynamic waves is specified with respect to the ambient mean magnetic field : right-hand polarized waves have a transverse electric field component which turns in a right-handed sense (that of the gyrating electrons) around the magnetic field.
		Column	A two-dimensional measure of a quantity. The column is the area over which the quantity is measured.
		Component	Projection of a vector along one of the base axes of a coordinate system.
		Component.I	Projection of a vector along the first named axis of a coordinate system. Typically the X axis, but could be the R axis for an RTN coordinate system.
		Component.J	Projection of a vector along the second named axis of a coordinate system. Typically the Y axis, but could be the T axis for an RTN coordinate system.
		Component.K	Projection of a vector along the third named axis of a coordinate system. Typically the Z axis, but could be the N axis for an RTN coordinate system.
		Core	The central or main part of an object or calculated distribution. For example, the part of a distribution of particles at low energies that is a thermal (Maxwellian) population.
		CrossSpectrum	The Fourier transform of the cross correlation of two physical or empirical observations.
		Deviation	The difference between an observed value and the expected value of a quantity.
		Differential	A measurement within a narrow range of energy and/or solid angle.
		Direction	The spatial relation between an object and another object, the orientation of the object or the course along which the object points

		or moves.
enumeration	DirectionAngle	The angle between a position vector or measured vector (or one of its projections onto a plane) and one of the base axes of the coordinate system.
enumeration	DirectionAngle.AzimuthAngle	The angle between the projection into the i-j plane of a position or measured vector and the i-axis of the coordinate system. Mathematically defined as $\arctan(j/i)$ .
enumeration	DirectionAngle.ElevationAngle	The angle between the position or measured vector and the i-j plane of the coordinate system. Mathematically defined as $\arctan(k/\sqrt{i^2+j^2})$ .
enumeration	DirectionAngle.PolarAngle	The angle between the position or measured vector and the k-axis of the coordinate system. Mathematically defined as $\arctan(\sqrt{i^2+j^2}/k)$ .
enumeration	Directional	A measurement within a narrow range of solid angle.
enumeration	FieldAligned	The component of a quantity which is oriented in the same direction of a field.
enumeration	Fit	Values that make a model agree with the data.
enumeration	Group	An assemblage of values that a certain relation or common characteristic.
enumeration	Halo	The part of an object or distribution surrounding some central body or distribution. For example, the particles above the core energies that show enhancements above the thermal population. Typically, a "power law tail" shows a break from the core Maxwellian at a particular energy.
enumeration	Integral	A flux measurement in a broad range of energy and solid angle.
enumeration	Integral.Area	Integration over the extent of a planar region, or of the surface of a solid.
enumeration	Integral.Bandwidth	Integration over the width of a frequency band.
enumeration	Integral.SolidAngle	Integration over the angle in three-dimensional space that an object subtends at a point.
enumeration	LineOfSight	The line of sight is the line that connects the observer with the observed object. This expression is often used with measurements of Doppler velocity and magnetic field in magnetograms, where only the component of the vector field directed along the line of sight is measured.
enumeration	Linear	Polarization where the E-field vector is confined to a given plane
enumeration	Magnitude	A measure of the strength of a vector quantity or length of its representational vector.
enumeration	Maximum	The largest value of a batch or sample or the upper bound of a probability distribution.
enumeration	Median	The measure of central tendency of a set of n. values computed by ordering the values and taking the value at position (n. + 1) / 2 when n. is odd or the arithmetic mean of the values at positions n. / 2 and (n. / 2) + 1 when n. is even.
enumeration	Minimum	The smallest value of a batch or sample or the lower bound of a probability distribution.
enumeration	Moment	Parameters determined by integration over a distribution function convolved with a power of velocity.
enumeration	Parallel	Having the same direction as a given direction
enumeration	Peak	The maximum value for the quantity in question, over a period of time which is usually equal to the cadence.
enumeration	Perpendicular	At right angles to a given direction.
enumeration	Perturbation	Variations in the state of a system.

enumeration	Phase	A point or portion in a recurring series of changes.
enumeration	PhaseAngle	Phase difference between two or more waves, normally expressed in degrees.
enumeration	Projection	A measure of the length of a position or measured vector as projected into a plane of the coordinate system.
enumeration	Projection.IJ	A measure of the length of a position or measured vector projected into the i-j (typically X-Y) plane of the coordinate system.
enumeration	Projection.IK	A measure of the length of a position or measured vector projected into the i-k (typically X-Z) plane of the coordinate system.
enumeration	Projection.JK	A measure of the length of a position or measured vector projected into the j-k (typically Y-Z) plane of the coordinate system.
enumeration	Pseudo	Similar to or having the appearance of something else. Can be used to indicate an estimation or approximation of a particular quantity.
enumeration	Ratio	The relative magnitudes of two quantities.
enumeration	Scalar	A quantity that is completely specified by its magnitude and has no direction.
enumeration	Spectral	Characterized as a range or continuum of frequencies
enumeration	StandardDeviation	The square root of the average of the squares of deviations about the mean of a set of data. Standard deviation is a statistical measure of spread or variability.
enumeration	StokesParameters	A set of four parameters (usually called I,Q,U and V) which describe the polarization state of an electromagnetic wave propagating through space.
enumeration	Strahl	A distribution of particles concentrated in a narrow energy band. The band may be aligned with a secondary feature. For example, it may occur in a narrow cone aligned with the mean magnetic field direction.
enumeration	Superhalo	The part of an object or distribution surrounding some central body or distribution evident in a second break in the distribution function (e.g., a different power law). It consists of a population at a higher energies than for a halo.
enumeration	Symmetric	Equal distribution about one or more axes.
enumeration	Tensor	A generalized linear "quantity" or "geometrical entity" that can be expressed as a multi-dimensional array relative to a choice of basis of the particular space on which it is defined.
enumeration	Total	The summation of quantities over all possible species.
enumeration	Trace	The sum of the elements on the main diagonal (the diagonal from the upper left to the lower right) of a square matrix.
enumeration	Uncertainty	A statistically defined discrepancy between a measured quantity and the true value of that quantity that cannot be corrected by calculation or calibration.
enumeration	Variance	A measure of dispersion of a set of data points around their mean value. The expectation value of the squared deviations from the mean.
enumeration	Vector	A set of parameter values each along some independent variable (e.g., components of a field in three orthogonal spatial directions; atmospheric temperature values at several altitudes, or at a given latitude and longitude;).
Used by	Complex Types	Element, Field, InputField, InputParameter, InputPopulation, Mixed, Particle, Property, Support, Wave

## Element FieldQuantity

Namespace	http://impex-fp7.oeaw.ac.at
-----------	-----------------------------

Annotations	The physical attribute of the field.	
Diagram	<p>The physical attribute of the field.</p>	
Type	enumFieldQuantity	
Properties	content: simple	
Facets	enumeration	Current The flow of electrons through a conductor caused by a potential difference.
	enumeration	Electric The physical attribute that exerts an electrical force.
	enumeration	Electromagnetic Electric and magnetic field variations in time and space that propagate through a medium or a vacuum with the wave's propagation, electric field, and magnetic field vectors forming an orthogonal triad. Waves in this category are detected by having their field quantities measured.
	enumeration	Gyrofrequency The number of gyrations around a magnetic guiding center (field line) a charged particle makes per unit time due to the Lorentz force.
	enumeration	Magnetic The physical attribute attributed to a magnet or its equivalent.
	enumeration	PlasmaFrequency A number-density-dependent characteristic frequency of a plasma.
	enumeration	Potential A field which obeys Laplace's Equation.
	enumeration	PoyntingFlux Electromagnetic energy flux transported by a wave characterized as the rate of energy transport per unit area per steradian.
Used by	Complex Types	Field, InputField
Source	<pre>&lt;xsd:element name="FieldQuantity" type="enumFieldQuantity"&gt;   &lt;xsd:annotation&gt;     &lt;xsd:documentation xml:lang="en"&gt;The physical attribute of the field.&lt;/xsd:documentation&gt;   &lt;/xsd:annotation&gt; &lt;/xsd:element&gt;</pre>	

## Element FrequencyRange

Namespace	http://impex-fp7.oeaw.ac.at
Diagram	<p>The range of possible values for the observed frequency.</p>
Type	FrequencyRange

Properties	content:	complex
Used by	Complex Types	Field, Wave
Model	SpectralRange{0,1} , Low , High , Units , Bin*	
Children	Bin, High, Low, SpectralRange, Units	
Instance	<FrequencyRange xmlns="http://impex-fp7.oeaw.ac.at"> <SpectralRange>{0,1}</SpectralRange> <Low>{1,1}</Low> <High>{1,1}</High> <Units>{1,1}</Units> <Bin>{0,unbounded}</Bin> </FrequencyRange>	
Source	<xsd:element name="FrequencyRange" type="FrequencyRange"/>	

## Element SpectralRange

Namespace	http://impex-fp7.oeaw.ac.at																																											
Annotations	The general term used to describe wavelengths or frequencies within a given span of values for those quantities.																																											
Diagram	<pre> classDiagram     class SpectralRange {         &lt;&lt;Type enumSpectralRange&gt;&gt;     }     class enumSpectralRange {         &lt;&lt;Identifiers for names associated with wavelengths. Based on the ISO 21348 Solar Irradiance Standard. Additions have...&gt;&gt;     }     SpectralRange "0..1" -- "0..1" enumSpectralRange   </pre>																																											
Type	enumSpectralRange																																											
Properties	content: simple

	enumeration	RadioFrequency	Photons with a wavelength range: 100,000 to $1.00 \times 10^{11}$ nm
	enumeration	SoftXRays	X-Rays with an energy range of 0.12 keV to 12 keV.
	enumeration	Ultraviolet	Photons with a wavelength range: 10 to 400 nm.
	enumeration	WhiteLight	Photons with a wavelength in the visible range for humans.
	enumeration	XRays	Photons with a wavelength range: $0.001 \leq x < 10$ nm
Used by	Complex Types	DisplayData, DisplayOutput, FrequencyRange, NumericalData, NumericalOutput, WavelengthRange	
Source		<pre>&lt;xsd:element name="SpectralRange" type="enumSpectralRange"&gt;   &lt;xsd:annotation&gt;     &lt;xsd:documentation xml:lang="en"&gt;The general term used to describe wavelengths or frequencies within a given span of values for those quantities.&lt;/xsd:documentation&gt;   &lt;/xsd:annotation&gt; &lt;/xsd:element&gt;</pre>	

## Element Low

Namespace	http://impex-fp7.oeaw.ac.at		
Annotations	The smallest value within a range of possible values.		
Diagram			
Type	xsd:double		
Properties	content: simple		
Used by	Complex Types	AzimuthalAngleRange, Bin, EnergyRange, FrequencyRange, PolarAngleRange, WavelengthRange	
Source		<pre>&lt;xsd:element name="Low" type="xsd:double"&gt;   &lt;xsd:annotation&gt;     &lt;xsd:documentation xml:lang="en"&gt;The smallest value within a range of possible values.&lt;/xsd:documentation&gt;   &lt;/xsd:annotation&gt; &lt;/xsd:element&gt;</pre>	

## Element High

Namespace	http://impex-fp7.oeaw.ac.at		
Annotations	The largest value within a range of possible values.		
Diagram			
Type	xsd:double		
Properties	content: simple		
Used by	Complex Types	AzimuthalAngleRange, Bin, EnergyRange, FrequencyRange, PolarAngleRange, WavelengthRange	
Source		<pre>&lt;xsd:element name="High" type="xsd:double"&gt;   &lt;xsd:annotation&gt;     &lt;xsd:documentation xml:lang="en"&gt;The largest value within a range of possible values.&lt;/xsd:documentation&gt;   &lt;/xsd:annotation&gt; &lt;/xsd:element&gt;</pre>	

## Element Bin

Namespace	http://impex-fp7.oeaw.ac.at		
-----------	-----------------------------	--	--

Diagram	<pre> classDiagram     class Bin {         BandName : xsd:string         Low : xsd:double         High : xsd:double     }     note over Bin: A grouping of observations according to a band or window of a common attribute.   </pre>
Type	Bin
Properties	content: complex
Used by	Complex Types AzimuthalAngleRange, EnergyRange, FrequencyRange, PolarAngleRange, WavelengthRange
Model	BandName{0,1}, Low, High
Children	BandName, High, Low
Instance	<pre> &lt;Bin xmlns="http://impex-fp7.oeaw.ac.at"&gt;   &lt;BandName&gt;{0,1}&lt;/BandName&gt;   &lt;Low&gt;{1,1}&lt;/Low&gt;   &lt;High&gt;{1,1}&lt;/High&gt; &lt;/Bin&gt;   </pre>
Source	<xsd:element name="Bin" type="Bin"/>

### Element BandName

Namespace	http://impex-fp7.oeaw.ac.at
Diagram	<pre> classDiagram     class BandName {         xsd:string     }     note over BandName: Built-in primitive type. The string datatype represents character strings in XML.   </pre>
Type	xsd:string
Properties	content: simple
Used by	Complex Type Bin
Source	<xsd:element name="BandName" type="xsd:string"/>

### Element EnergyRange

Namespace	http://impex-fp7.oeaw.ac.at
Diagram	<pre> classDiagram     class EnergyRange {         Low : xsd:double         High : xsd:double         Units : xsd:string         Bin : Bin     }     note over EnergyRange: The minimum and maximum energy values of the particles represented by a given "physical parameter" description.   </pre>

Type	EnergyRange
Properties	content: complex
Used by	Complex Types Particle, Wave
Model	Low , High , Units , Bin*
Children	Bin, High, Low, Units
Instance	<pre>&lt;EnergyRange xmlns="http://impex-fp7.oeaw.ac.at"&gt;   &lt;Low&gt;{1,1}&lt;/Low&gt;   &lt;High&gt;{1,1}&lt;/High&gt;   &lt;Units&gt;{1,1}&lt;/Units&gt;   &lt;Bin&gt;{0,unbounded}&lt;/Bin&gt; &lt;/EnergyRange&gt;</pre>
Source	<xsd:element name="EnergyRange" type="EnergyRange"/>

## Element AzimuthalAngleRange

Namespace	http://impex-fp7.oeaw.ac.at
Diagram	<pre> classDiagram     class AzimuthalAngleRange {         Low : xsd:double         High : xsd:double         Units : xsd:string         Bin : Bin     }     Note over AzimuthalAngleRange: The range of possible azimuthal angles for a group of energy observations.      Default units are degrees.   </pre>
Type	AzimuthalAngleRange
Properties	content: complex
Used by	Complex Type Particle
Model	Low , High , Units , Bin*
Children	Bin, High, Low, Units
Instance	<pre>&lt;AzimuthalAngleRange xmlns="http://impex-fp7.oeaw.ac.at"&gt;   &lt;Low&gt;{1,1}&lt;/Low&gt;   &lt;High&gt;{1,1}&lt;/High&gt;   &lt;Units&gt;{1,1}&lt;/Units&gt;   &lt;Bin&gt;{0,unbounded}&lt;/Bin&gt; &lt;/AzimuthalAngleRange&gt;</pre>

## Element WaveType

Namespace	http://impex-fp7.oeaw.ac.at		
Annotations	A characterization of the carrier or phenomenon of wave information observed by the measurement.		
Diagram	<pre> classDiagram     WaveType &lt; -- enumWaveType   </pre> <p>A characterization of the carrier or phenomenon of wave information observed by the measurement.</p>		
Type	enumWaveType		
Properties	content: simple		
Facets	enumeration	Electromagnetic	Electric and magnetic field variations in time and space that propagate through a medium or a vacuum with the wave's propagation, electric field, and magnetic field vectors forming an orthogonal triad. Waves in this category

		are detected by having their field quantities measured.
enumeration	Electrostatic	Collective longitudinal electric-field and plasma oscillations trapped within a body of plasma.
enumeration	Hydrodynamic	Periodic or quasi-periodic oscillations of fluid quantities.
enumeration	MHD	Hydrodynamic waves in a magnetized plasma in which the background magnetic field plays a key role in controlling the wave propagation characteristics.
enumeration	Photon	Electromagnetic waves detected by techniques that utilize their corpuscular character (e.g., CCD, CMOS, photomultipliers).
enumeration	PlasmaWaves	Self-consistent collective oscillations of particles and fields (electric and magnetic) in a plasma.
Used by	Complex Type	Wave

enumeration	ACElectricField	Alternating electric field component of a wave.																																	
enumeration	ACMagneticField	Alternating magnetic field component of a wave.																																	
enumeration	Absorption	Decrease of radiant energy (relative to the background continuum spectrum).																																	
enumeration	Albedo	The ratio of reflected radiation from the surface to incident radiation upon it.																																	
enumeration	DopplerFrequency	Change in the frequency of a propagating wave due to motion of the source, the observer, the reflector, or the propagation medium.																																	
enumeration	Emissivity	The energy emitted spontaneously per unit bandwidth (typically frequency) per unit time per unit mass of source. Emissivity is usually integrated over all directions/solid angles.																																	
enumeration	EnergyFlux	The amount of energy passing through a unit area in a unit time.																																	
enumeration	EquivalentWidth	The spectral width of a total absorption line having the amount of absorbed radiant energy being equivalent to that in an observed absorption line.																																	
enumeration	Frequency	The number of occurrences of a repeating event per unit time.																																	
enumeration	Gyrofrequency	The number of gyrations around a magnetic guiding center (field line) a charged particle makes per unit time due to the Lorentz force.																																	
enumeration	Intensity	The measurement of radiant or wave energy per unit detector area per unit bandwidth per unit solid angle per unit time.																																	

	enumeration	LineDepth	The measure of the amount of absorption below the continuum (depth) in a particular wavelength or frequency in an absorption spectrum.
	enumeration	MagneticField	A region of space near a magnetized body where magnetic forces can be detected (as measured by methods such as Zeeman splitting, etc.).
	enumeration	ModeAmplitude	In helioseismology the magnitude of oscillation of waves of a particular geometry.
	enumeration	PlasmaFrequency	A number-density-dependent characteristic frequency of a plasma.
	enumeration	Polarization	Direction of the electric vector of an electromagnetic wave. The wave can be linearly polarized in any direction perpendicular to the direction of travel, circularly polarized (clockwise or counterclockwise), unpolarized, or mixtures of the above.
	enumeration	PoyntingFlux	Electromagnetic energy flux transported by a wave characterized as the rate of energy transport per unit area per steradian.
	enumeration	PropagationTime	Time difference between transmission and reception of a wave in an active wave experiment.
	enumeration	StokesParameters	A set of four parameters (usually called I,Q,U and V) which describe the polarization state of an electromagnetic wave propagating through space.
	enumeration	Velocity	Rate of change of position. Also used for the average velocity of a collection of particles, also referred to as "bulk velocity".
	enumeration	Wavelength	The peak-to-peak distance over one wave period.

## Element MixedQuantity

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	A characterization of the combined attributes of a quantity.
Diagram	<pre> classDiagram     class MixedQuantity {         &lt;&lt;MixedQuantity&gt;&gt;         &lt;&lt;Type enumMixedQuantity&gt;&gt;     }     class enumMixedQuantity {         &lt;&lt;enumMixedQuantity&gt;&gt;     }      MixedQuantity --&gt; enumMixedQuantity   </pre> <p>A characterization of the combined attributes of a quantity.</p> <p>Identifiers for the combined attributes of a mixed parameter quantity.</p>
Type	enumMixedQuantity

Properties	content:	simple	
Facets	enumeration	AkasofuEpsilon	A measure of the magnetopause energy flux and an indicator of the solar wind power available for subsequent magnetospheric energization. Defined as: $V*B^2*l^2\sin(\theta/2)^4$ where B is the IMF, l is an empirical scaling parameter equal to 7 RE, and $\theta = \tan(BY/BZ)^{-1}$ the IMF clock angle.
	enumeration	AlfvenMachNumber	The ratio of the bulk flow speed to the Alfvén speed.
	enumeration	AlfvenVelocity	Phase velocity of the Alfvén wave; In SI units it is the velocity of the magnetic field divided by the square root of the mass density times the permeability of free space ( $\mu_0$ ).
	enumeration	FrequencyToGyrofrequencyRatio	The ratio of the characteristic frequency of a medium to gyrofrequency of a particle.
	enumeration	MagnetosonicMachNumber	The ratio of the velocity of fast mode waves to the Alfvén velocity.
	enumeration	Other	Not classified with more specific terms. The context of its usage may be described in related text.
	enumeration	PlasmaBeta	The ratio of the plasma pressure ( $nkT$ ) to the magnetic pressure ( $B^2/2\mu_0$ ) of the $SUM(nkT)/(B^2/2\mu_0)$ .
	enumeration	TotalPressure	In an MHD fluid it is the number density (N) times Boltzmann constant times the temperature in Kelvin.
	enumeration	VCrossB	The cross product of the charge velocity (V) and the magnetic field (B). It is the electric field exerted on a point charge by a magnetic field.
Used by	Complex Type	Mixed

## Element ParticleType

Namespace	http://impex-fp7.oeaw.ac.at		
Annotations	A characterization of the kind of particle observed by the measurement.		
Diagram	<p>A characterization of the kind of particle observed by the measurement.</p>		
Type	enumParticleType		
Properties	content:	simple	
Facets	enumeration	Aerosol	A suspension of fine solid or liquid particles in a gas.
	enumeration	AlphaParticle	A positively charged nuclear particle that consists of two protons and two neutrons.
	enumeration	Atom	Matter consisting of a nucleus surrounded by electrons which has no net charge.
	enumeration	Dust	Free microscopic particles of solid material.
	enumeration	Electron	An elementary particle consisting of a charge of negative electricity equal to about $1.602 \times 10^{-19}$ Coulomb and having a mass when at rest of about $9.109534 \times 10^{-28}$ gram.
	enumeration	Ion	An atom that has acquired a net electric charge by gaining or losing one or more electrons.(Note: $Z>2$ )

	enumeration	Molecule	A group of atoms so united and combined by chemical affinity that they form a complete, integrated whole, being the smallest portion of any particular compound that can exist in a free state
	enumeration	Neutron	An elementary particle that has no net charge and is a constituent of atomic nuclei, and that has a mass slightly large than a proton ( $1.673 \times 10^{-24}$ gram.)
	enumeration	Proton	An elementary particle that is a constituent of all atomic nuclei, that carries a positive charge numerically equal to the charge of an electron, and that has a mass of $1.673 \times 10^{-24}$ gram.
Used by	Complex Types	InputPopulation, Mixed, Particle

May give simple fluxes, but full distribution functions are sometimes measured.	enumeration	Irradiance	Irradiance - A radiometric term for the power of electromagnetic radiation at a surface,
enumeration	Current	Direct measurement of the electric currency																																	
enumeration	ActivityIndex	An indication, derived from one or more measurements, of the level of activity of an object or region, such as sunspot number, F10.7 flux, Dst, or the Polar Cap Indices.																																	
enumeration	Dopplergram	A map or image depicting the spatial distribution of line-of-sight velocities of the observed object.																																	
enumeration	Dust	Free microscopic particles of solid material.																																	
enumeration	ElectricField	A region of space around a charged particle, or between two voltages within which a force is exerted on charged objects in its vicinity. An electric field is the electric force per unit charge.																																	
enumeration	EnergeticParticles	Pieces of matter that are moving very fast. Energetic particles include protons, electrons, neutrons, neutrinos, the nuclei of atoms, and other sub-atomic particles.																																	
enumeration	Ephemeris	The spatial coordinates of a body as a function of time. When used as an Instrument Type it represents the process or methods used to generate spatial coordinates.																																	
enumeration	ImageIntensity	Measurements of the two-dimensional distribution of the intensity of photons from some region or object such as the Sun or the polar auroral regions; can be in any wavelength band, and polarized, etc.																																	
enumeration	InstrumentStatus	A quantity directly related to the operation or function of an instrument.																																	
enumeration	IonComposition	In situ measurements of the relative flux or density of electrically charged particles in the space environment. May give simple fluxes, but full distribution functions are sometimes measured.																																	
enumeration	Irradiance	Irradiance - A radiometric term for the power of electromagnetic radiation at a surface,																																	

		per unit area. "Irradiance" is used when the electromagnetic radiation is incident on the surface. Irradiance data may be reported in any units (i.e. counts/s) due to, for example, being at a particular wavelength, or to being a not-fully-calibrated relative measurement.
enumeration	MagneticField	A region of space near a magnetized body where magnetic forces can be detected (as measured by methods such as Zeeman splitting, etc.).
enumeration	Magnetogram	Measurements of the vector or line-of-sight magnetic field determined from remote sensing measurements of the detailed structure of spectral lines, including their splitting and polarization. ("Magnetogram.")
enumeration	NeutralAtomImages	Measurements of neutral atom fluxes as a function of look direction; often related to remote energetic charged particles that lose their charge through charge-exchange and then reach the detector on a line-of-sight trajectory.
enumeration	NeutralGas	Measurements of neutral atomic and molecular components of a gas.
enumeration	Profile	Measurements of a quantity as a function of height above an object such as the limb of a body.
enumeration	Radiance	A radiometric measurement that describes the amount of electromagnetic radiation that passes through or is emitted from a particular area, and falls within a given solid angle in a specified direction. They are used to characterize both emission from diffuse sources and reflection from diffuse surfaces.
enumeration	Spectrum	The distribution of a characteristic of a physical system or phenomenon, such as the energy emitted by a radiant source, arranged in the order of wavelengths.
enumeration	ThermalPlasma	Measurements of the plasma in the energy regime where the most of the plasma occurs. May be the basic fluxes in the form of distribution functions or the derived bulk parameters (density, flow velocity, etc.).
enumeration	Waves	Data resulting from observations of wave experiments and natural wave phenomena. Wave experiments are typically active and natural wave phenomena are passive. Examples of wave experiments include coherent/incoherent scatter radars, radio soundings, VLF propagation studies, ionospheric scintillation of beacon satellite signals, etc. Examples of natural wave phenomena include micropulsations, mesospheric gravity waves, auroral/plasmaspheric hiss, Langmuir waves, AKR, Jovian decametric radiation, solar radio bursts, etc.
enumeration	Waves.Active	Exerting an influence or producing a change or effect. An active measurement is one which produces a transmission or excitation as a part of the measurement cycle.
enumeration	Waves.Passive	Movement or effect produced by outside influence. A passive measurement is one which does not produce a transmission or excitation as a part of the measurement cycle.

For Earth, the magnetotail begins at a night-side radial distance of 10 Re (X > -10Re).	enumeration	Earth.Magnetosphere.Main	The region of the magnetosphere where the magnetic field lines are closed, but does not include the gaseous region gravitationally bound to the body.	enumeration	Earth.Magnetosphere.Polar	The region near the pole of a body. For a magnetosphere the polar region is the area where magnetic field lines are open and includes the auroral zone.	enumeration	Earth.Magnetosphere.RadiationBelt	The region within a magnetosphere where high-energy particles could potentially be trapped in a magnetic field.	enumeration	Earth.NearSurface	The gaseous and possibly ionized environment of a body extending from the surface to some specified altitude. For the Earth, this altitude is 2000 km.	enumeration	Earth.NearSurface.Atmosphere	The neutral gases surrounding a body that extends from the surface and is bound to the body by virtue of the gravitational attraction.	enumeration	Earth.NearSurface.AuroralRegion	The region in the atmospheric where electrically-charged
enumeration	Asteroid	A small extraterrestrial body consisting mostly of rock and metal that is in orbit around the sun.																																							
enumeration	Callisto	A moon of the planet Jupiter, the second largest after Ganymede and the third-largest in the solar system																																							
enumeration	Comet	A relatively small extraterrestrial body consisting of a frozen mass that travels around the sun in a highly elliptical orbit.																																							
enumeration	Earth	The third planet from the sun in our solar system.																																							
enumeration	Earth.Magnetosheath	The region between the bow shock and the magnetopause, characterized by very turbulent plasma.																																							
enumeration	Earth.Magnetosphere	The region of space above the atmosphere or surface of the planet, and bounded by the magnetopause, that is under the direct influence of the planet's magnetic field.																																							
enumeration	Earth.Magnetosphere.Magnetotail	The region on the night side of the body where the magnetic field is stretched backwards by the force of the solar wind. For Earth, the magnetotail begins at a night-side radial distance of 10 Re (X > -10Re).																																							
enumeration	Earth.Magnetosphere.Main	The region of the magnetosphere where the magnetic field lines are closed, but does not include the gaseous region gravitationally bound to the body.																																							
enumeration	Earth.Magnetosphere.Polar	The region near the pole of a body. For a magnetosphere the polar region is the area where magnetic field lines are open and includes the auroral zone.																																							
enumeration	Earth.Magnetosphere.RadiationBelt	The region within a magnetosphere where high-energy particles could potentially be trapped in a magnetic field.																																							
enumeration	Earth.NearSurface	The gaseous and possibly ionized environment of a body extending from the surface to some specified altitude. For the Earth, this altitude is 2000 km.																																							
enumeration	Earth.NearSurface.Atmosphere	The neutral gases surrounding a body that extends from the surface and is bound to the body by virtue of the gravitational attraction.																																							
enumeration	Earth.NearSurface.AuroralRegion	The region in the atmospheric where electrically-charged																																							

		particles bombarding the upper atmosphere of a planet in the presence of a magnetic field produce an optical phenomenon.
enumeration	Earth.NearSurface.EquatorialRegion	The Region centered on the equator and limited in latitude by approximately 23 degrees north and south of the equator.
enumeration	Earth.NearSurface.Ionosphere	The charged or ionized gases surrounding a body that are nominally bound to the body by virtue of the gravitational attraction.
enumeration	Earth.NearSurface.Ionosphere.DRegion	The Region of the ionosphere that exists approximately 50 to 95 km above the surface of the Earth. One of several layers in the ionosphere.
enumeration	Earth.NearSurface.Ionosphere.ERegion	A Region ionised gas occurring at 90-150km above the ground. One of several layers in the ionosphere. Also called the The Kennelly-Heaviside layer.
enumeration	Earth.NearSurface.Ionosphere.FRegion	A Region that contains ionized gases at a height of around 150-800 km above sea level, placing it in the thermosphere. the F region has the highest concentration of free electrons and ions anywhere in the atmosphere. It may be thought of as comprising two layers, the F1-and F2-layers. One of several layers in the ionosphere. Also known as the Appleton layer.
enumeration	Earth.NearSurface.Ionosphere.TRegion	The Troposphere at the upper most areas of the ionosphere.
enumeration	Earth.NearSurface.Mesosphere	The layer of the atmosphere that extends from the Stratosphere to a range of 80 km to 85 km, temperature decreasing with height.
enumeration	Earth.NearSurface.Plasmasphere	Region of the magnetosphere consisting of low energy (cool) plasma. It is located above the ionosphere. The outer boundary of the plasmasphere is known as the plasmapause, which is defined by an order of magnitude drop in plasma density.
enumeration	Earth.NearSurface.PolarCap	The areas of the globe surrounding the poles and consisting of the region north of 60 degrees north latitude an the region south of 60 degrees south latitude.
enumeration	Earth.NearSurface.SouthAtlanticAnomalyRegion	The regionally Earth's inner van Allen radiation belt makes its closest approach to the planet's surface. The result is that, for a given altitude, the radiation intensity is higher over this region than elsewhere.
enumeration	Earth.NearSurface.Stratosphere	The layer of the atmosphere that extends from the troposphere to about 30 km, temperature increases with height. The stratosphere contains the ozone layer.
enumeration	Earth.NearSurface.Thermosphere	The layer of the atmosphere that extends from the Mesosphere to 640+ km, temperature increasing with height.
enumeration	Earth.NearSurface.Troposphere	The lowest layer of the atmosphere which begins at the surface and extends to between 7 km (4.4 mi) at the poles and 17 km (10.6 mi) at the equator, with some variation due to weather factors.
enumeration	Earth.Surface	The outermost area of a solid object.
enumeration	Enceladus	One of the innermost moons of Saturn.
enumeration	Europa	The sixth-closest moon of the planet Jupiter
enumeration	Ganymede	The biggest moon of Jupiter planet in our solar system.
enumeration	Heliosphere	The solar atmosphere extending roughly from the outer corona to the edge of the solar plasma at the heliopause separating primarily solar plasma from interstellar plasma.
enumeration	Heliosphere.Heliosheath	The region extending radially outward from the heliospheric termination shock and in which the decelerated solar wind plasma is still significant.

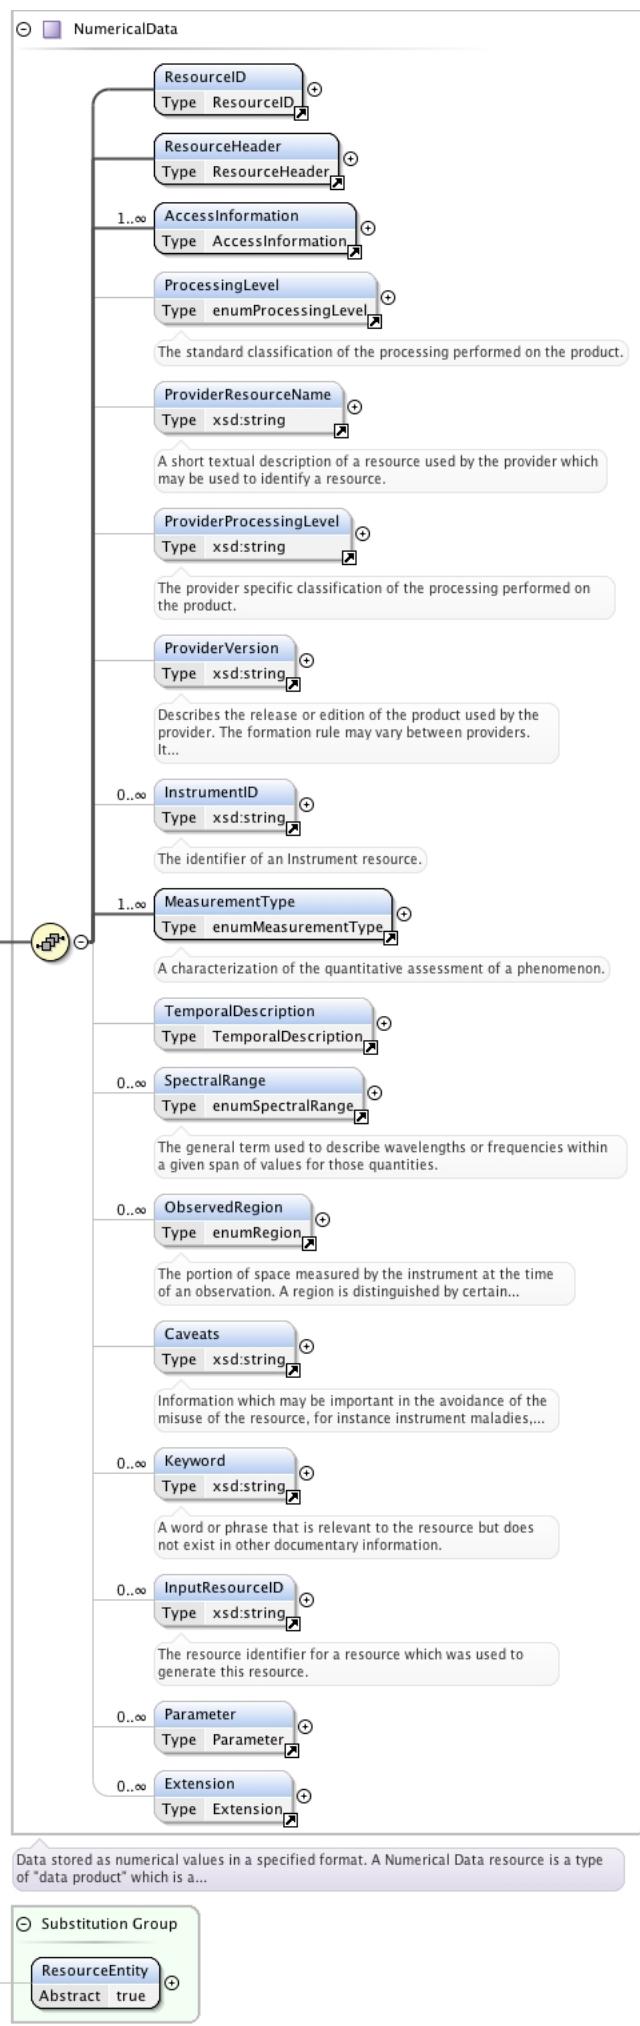

enumeration	Heliosphere.Inner	The region of the heliosphere extending radially outward from the solar coronal base to just inside 1 AU.
enumeration	Heliosphere.NearEarth	The heliospheric region near the Earth which extends to and includes the area near the L1 and L2 Lagrange point.
enumeration	Heliosphere.Outer	The region of the heliosphere extending radially outward from just outside 1 AU to the heliospheric termination shock.
enumeration	Heliosphere.Remote1AU	A roughly toroidal region that includes the Earth's orbit, but exclusive of the region near the Earth.
enumeration	Interstellar	The region between stars outside of the star's heliopause.
enumeration	Io	The innermost of the four Galilean moons of the planet Jupiter
enumeration	Jupiter	The fifth planet from the sun in our solar system.
enumeration	Jupiter.Magnetosphere	The magnetosphere of the fifth planet from the sun in our solar system.
enumeration	Mars	The forth planet from the sun in our solar system.
enumeration	Mercury	The first planet from the sun in our solar system.
enumeration	Mercury.Magnetosphere	The magnetosphere of the first planet from the sun in our solar system.
enumeration	Neptune	The seventh planet from the sun in our solar system.
enumeration	Planet	There are eighth planets in the solar system.
enumeration	Planet.Magnetosphere	The magnetosphere of one of the planets in the solar system.
enumeration	Pluto	The ninth (sub)planet from the sun in our solar system.
enumeration	Rhea	The second-largest moon of Saturn and the ninth largest moon in the Solar System
enumeration	Saturn	The sixth planet from the sun in our solar system.
enumeration	Saturn.Magnetosphere	The magnetosphere of the sixth planet from the sun in our solar system.
enumeration	Sun	The star upon which our solar system is centered.
enumeration	Sun.Chromosphere	The region of the Sun's (or a star's) atmosphere above the temperature minimum and below the Transition Region. The solar chromosphere is approximately 400 km to 2100 km above the photosphere, and characterized by temperatures from 4500 - 28000 K.
enumeration	Sun.Corona	The outermost atmospheric region of the Sun or a star, characterized by ionization temperatures above $10^5$ K. The solar corona starts at about 2100 km above the photosphere; there is no generally defined upper limit.
enumeration	Sun.Interior	The region inside the body which is not visible from outside the body.
enumeration	Sun.Photosphere	The atmospheric layer of the Sun or a star from which continuum radiation, especially optical, is emitted to space. For the Sun, the photosphere is about 500 km thick.
enumeration	Sun.TransitionRegion	A very narrow (<100 km) layer between the chromosphere and the corona where the temperature rises abruptly from about 8000 to about 500,000 K.
enumeration	Titan	The largest moon of Saturn
enumeration	Uranus	The eighth planet from the sun in our solar system.
enumeration	Venus	The second planet from the sun in our solar

		system.

## Element HashValue

Namespace	http://impex-fp7.oeaw.ac.at	
Annotations	The value calculated by a hash function, e.g. the message digest of a digital data object.	
Diagram	<p>The diagram shows a class named 'HashValue' with a note below it: 'The value calculated by a hash function, e.g. the message digest of a digital data object.' A relationship line connects 'HashValue' to a 'xsd:string' element, with a note above it: 'Type xsd:string'. A callout box next to 'xsd:string' says: 'Built-in primitive type. The string datatype represents character strings in XML.'</p>

## Element InstrumentType

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	A characterization of an integrated collection of software and hardware containing one or more sensors and associated controls used to produce data on an environment.

Diagram	<p>A characterization of an integrated collection of software and hardware containing one or more sensors and associated...</p> <p>Identifiers for the type of experiment the instrument performs. This is the technique of observation.</p>	
Type	enumInstrumentType	
Properties	content: simple	
Facets	enumeration	Antenna A sensor used to measure electric potential.
	enumeration	Channeltron An instrument that detects electrons, ions, and UV-radiation, according to the principle of a secondary emission multiplier. It is typically used in electron spectroscopy and mass spectrometry.
	enumeration	Coronograph An instrument which can image things very close to the Sun by using a disk to block the Sun's bright surface which reveals the faint solar corona and other celestial objects.
	enumeration	DoubleSphere A dipole antenna of which the active (sensor) elements are small spheres located at the ends of two wires deployed in the equatorial plane, on opposite sides of a spinning spacecraft.
	enumeration	DustDetector An instrument which determines the mass and speed of ambient dust particles.
	enumeration	ElectronDriftInstrument An active experiment to measure the electron drift velocity based on sensing the displacement of a weak beam of electrons after one gyration in the ambient magnetic field.
	enumeration	ElectrostaticAnalyser An instrument which uses charged plates to analyze the mass, charge and kinetic energies of charged particles which enter the instrument.
	enumeration	EnergeticParticleInstrument An instrument that measures fluxes of charged particles as a function of time, direction of motion, mass, charge and/or species.
	enumeration	FaradayCup An instrument consisting of an electrode from which electrical current is measured while a charged particle beam (electrons or ions) impinges on it. Used to determine energy spectrum and sometimes ion composition of the impinging particles.
	enumeration	FluxFeedback A search coil whose bandwidth and signal/noise ratio are increased by the application of negative feedback at the sensor (flux) level by driving a collocated coil with a signal from the preamplifier.
	enumeration	FourierTransformSpectrograph An instrument that determines the spectra of a radiative source, using time-domain measurements and a Fourier transform.
	enumeration	GeigerMuellerTube An instrument which measures density of ionizing radiation based on interactions with a gas.
	enumeration	Imager An instrument which samples the radiation from an area at one or more spectral ranges emitted or reflected by an object.
	enumeration	ImagingSpectrometer An instrument which is a multispectral scanner with a very large number of channels (64-256 channels) with very narrow band widths.
	enumeration	Interferometer An instrument to study the properties of two or more waves from the pattern of interference created by their superposition.
	enumeration	IonChamber A device in which the collected electrical charge from ionization in a gas-filled cavity is taken to be the proportion to some parameter (e.g. dose or exposure) of radiation field
	enumeration	IonDrift A device which measures the current produced by the displacement of ambient ions on a grid, thereby allowing the determination of the ion trajectory and velocity.

enumeration	LangmuirProbe	A monopole antenna associated with an instrument. The instrument applies a potential to the antenna which is swept to determine the voltage/current characteristic. This provides information about the plasma surrounding the probe and spacecraft.
enumeration	LongWire	A dipole antenna whose active (sensor) elements are two wires deployed in the equatorial plane on opposite sides of a spinning spacecraft, and whose length is several times greater than the spacecraft diameter.
enumeration	Magnetometer	An instrument which measures the ambient magnetic field.
enumeration	MassSpectrometer	An instrument which distinguishes chemical species in terms of their different isotopic masses.
enumeration	MicrochannelPlate	An instrument used for the detection of elementary particles, ions, ultraviolet rays and soft X-rays constructed from very thin conductive glass capillaries.
enumeration	MultispectralImager	An instrument which captures images at multiple spectral ranges.
enumeration	NeutralAtomImager	An instrument which measures the quantity and properties of neutral particles over a range of angles. Measured properties can include mass and energy.
enumeration	NeutralParticleDetector	An instrument which measures the quantity and properties of neutral particles. Measured properties can include mass and plasma bulk densities.
enumeration	ParticleCorrelator	An instrument which correlates particle flux to help identify wave/particle interactions.
enumeration	ParticleDetector	An instrument which detects particle flux!!!
enumeration	Photometer	An instrument which measures the strength of electromagnetic radiation within a spectral band which can range from ultraviolet to infrared and includes the visible spectrum.
enumeration	Photopolarimeter	An instrument which measures the intensity and polarization or radiant energy. A photopolarimeter is a combination of a photometer and a polarimeter.
enumeration	Platform	A collection of components which can be positioned and oriented as a single unit. A platform may contain other platforms. For example, a spacecraft is a platform which may have components that can be articulated and are also considered platforms.
enumeration	ProportionalCounter	An instrument which measures energy of ionization radiation based on interactions with a gas.
enumeration	QuadrисphericalAnalyser	An instrument used for the 3-D detection of plasma, energetic electrons and ions, and for positive-ion composition measurements.
enumeration	Radar	An instrument that uses directional properties of returned power to infer spatial and/or other characteristics of a remote object.
enumeration	Radiometer	An instrument for detecting or measuring radiant energy. Radiometers are commonly limited to infrared radiation.
enumeration	ResonanceSounder	A combination of a radio receiver and a pulsed transmitter used to study the plasma surrounding a spacecraft by identifying resonances or cut-offs (of the wave dispersion relation), whose frequencies are related to the ambient plasma density and magnetic field. When the transmitter is off it is essentially a high frequency-resolution spectral power receiver.
enumeration	RetardingPotentialAnalyser	An instrument which measures ion temperatures and ion concentrations using a planar ion

		trap.
enumeration	Riometer	An instrument which measure the signal strength in various directions of the galactic radio signals. Variations in these signals are influenced by solar flare activity and geomagnetic storm and substorm processes.
enumeration	ScintillationDetector	An instrument which detects flourescences of a material which is excited by high energy (ionizing) electromagnetic or charged particle radiation.
enumeration	SearchCoil	An instrument which measures the time variation of the magnetic flux threading a loop by measurement of the electric potential difference induced between the ends of the wire.
enumeration	Sounder	An instrument which measures the radiances from an object. A sounder may measure radiances at multiple spectral ranges.
enumeration	SpacecraftPotentialControl	An instrument to control the electric potential of a spacecraft with respect to the ambient plasma by emitting a variable current of positive ions.
enumeration	SpectralPowerReceiver	A radio receiver which determines the power spectral density of the electric or magnetic field, or both, at one or more frequencies.
enumeration	Spectrometer	An instrument that measures the component wavelengths of light (or other electromagnetic radiation) by splitting the light up into its component wavelengths.
enumeration	TimeOfFlight	An instrument which measures the time it takes for a particle to travel between two detectors.
enumeration	Unspecified	A value which is not provided.
enumeration	WaveformReceiver	A radio receiver which outputs the value of one or more components of the electric and/or magnetic field as a function of time.
Used by	Complex Type	Instrument

enumeration	Asteroid	A small extraterrestrial body consisting mostly of rock and metal that is in orbit around the sun.																																														
enumeration	Callisto	A moon of the planet Jupiter, the second largest after Ganymede and the third-largest in the solar system																																														
enumeration	Comet	A relatively small extraterrestrial body consisting of a frozen mass that travels around the sun in a highly elliptical orbit.																																														
enumeration	Earth	The third planet from the sun in our solar system.																																														
enumeration	Earth.Magnetosheath	The region between the bow shock and the magnetopause, characterized by very turbulent plasma.																																														
enumeration	Earth.Magnetosphere	The region of space above the atmosphere or surface of the planet, and bounded by the magnetopause, that is under the direct influence of the planet's magnetic field.																																														
enumeration	Earth.Magnetosphere.Magnetotail	The region on the night side of the body where the magnetic field is stretched backwards by the force of the solar wind. For Earth, the magnetotail begins at a night-side radial distance of 10 Re ( $X > -10Re$ ).																																														
enumeration	Earth.Magnetosphere.Main	The region of the magnetosphere where the magnetic field lines are closed, but does not include the gaseous region gravitationally bound to the body.																																														
enumeration	Earth.Magnetosphere.Polar	The region near the pole of a body. For a magnetosphere the polar region is the area where magnetic field lines are open and includes the auroral zone.																																														
enumeration	Earth.Magnetosphere.RadiationBelt	The region within a magnetosphere where high-energy particles could potentially be trapped in a magnetic field.																																														
enumeration	Earth.NearSurface	The gaseous and possibly ionized environment of a body extending from the surface to some specified altitude. For the Earth, this altitude is 2000 km.																																														
enumeration	Earth.NearSurface.Atmosphere	The neutral gases surrounding a body that extends from the surface and is bound to the body by virtue of the gravitational attraction.																																														
enumeration	Earth.NearSurface.AuroralRegion	The region in the atmospheric where electrically-charged particles bombarding the upper atmosphere of a planet in the presence of a magnetic field produce an optical phenomenon.																																														
enumeration	Earth.NearSurface.EquatorialRegion	The region centered on the equator and limited in latitude by approximately 23 degrees north and south of the equator.																																														
enumeration	Earth.NearSurface.Ionosphere	The charged or ionized gases surrounding a body that are nominally bound to the body																																														

		by virtue of the gravitational attraction.
enumeration	Earth.NearSurface.Ionosphere.E	The Region of the ionosphere that exists approximately 50 to 95 km above the surface of the Earth. One of several layers in the ionosphere.
enumeration	Earth.NearSurface.Ionosphere.F	The Regionised gas occurring at 90-150km above the ground. One of several layers in the ionosphere. Also called the The Kennelly-Heaviside layer.
enumeration	Earth.NearSurface.Ionosphere.F1	The Region contains ionized gases at a height of around 150-800 km above sea level, placing it in the thermosphere. the F region has the highest concentration of free electrons and ions anywhere in the atmosphere. It may be thought of as comprising two layers, the F1-and F2-layers. One of several layers in the ionosphere. Also known as the Appleton layer.
enumeration	Earth.NearSurface.Ionosphere.F2	The Region at the upper most areas of the ionosphere.
enumeration	Earth.NearSurface.Mesosphere	The layer of the atmosphere that extends from the Stratosphere to a range of 80 km to 85 km, temperature decreasing with height.
enumeration	Earth.NearSurface.Plasmasphere	The region of the magnetosphere consisting of low energy (cool) plasma. It is located above the ionosphere. The outer boundary of the plasmasphere is known as the plasmapause, which is defined by an order of magnitude drop in plasma density.
enumeration	Earth.NearSurface.PolarCap	The areas of the globe surrounding the poles and consisting of the region north of 60 degrees north latitude an the region south of 60 degrees south latitude.
enumeration	Earth.NearSurface.SouthAtlanticAnomaly	The Region Earth's inner van Allen radiation belt makes its closest approach to the planet's surface. The result is that, for a given altitude, the radiation intensity is higher over this region than elsewhere.
enumeration	Earth.NearSurface.Stratosphere	The layer of the atmosphere that extends from the troposphere to about 30 km, temperature increases with height. The stratosphere contains the ozone layer.
enumeration	Earth.NearSurface.Thermosphere	The layer of the atmosphere that extends from the Mesosphere to 640+ km, temperature increasing with height.
enumeration	Earth.NearSurface.Troposphere	The lowest layer of the atmosphere which begins at the surface and extends to between 7 km (4.4 mi) at the poles and 17 km (10.6 mi) at the equator, with some variation due to weather factors.
enumeration	Earth.Surface	The outermost area of a solid object.
enumeration	Enceladus	One of the innermost moons of Saturn.
enumeration	Europa	The sixth-closest moon of the planet Jupiter
enumeration	Ganymede	The biggest moon of Jupiter planet in our solar system.
enumeration	Heliosphere	The solar atmosphere extending roughly from the outer corona to the edge of the solar plasma at the heliopause separating primarily solar plasma from interstellar plasma.
enumeration	Heliosphere.Heliosheath	The region extending radially outward from the heliospheric termination shock and in which the decelerated solar wind plasma is still significant.
enumeration	Heliosphere.Inner	The region of the heliosphere extending radially outward from the solar coronal base to just inside 1 AU.
enumeration	Heliosphere.NearEarth	The heliospheric region near the Earth which extends to and includes the area near the L1 and L2 Lagrange point.
enumeration	Heliosphere.Outer	The region of the heliosphere extending radially

		outward from just outside 1 AU to the heliospheric termination shock.
enumeration	Heliosphere.Remote1AU	A roughly toroidal region that includes the Earth's orbit, but exclusive of the region near the Earth.
enumeration	Interstellar	The region between stars outside of the star's heliopause.
enumeration	Io	The innermost of the four Galilean moons of the planet Jupiter
enumeration	Jupiter	The fifth planet from the sun in our solar system.
enumeration	Jupiter.Magnetosphere	The magnetosphere of the fifth planet from the sun in our solar system.
enumeration	Mars	The forth planet from the sun in our solar system.
enumeration	Mercury	The first planet from the sun in our solar system.
enumeration	Mercury.Magnetosphere	The magnetosphere of the first planet from the sun in our solar system.
enumeration	Neptune	The seventh planet from the sun in our solar system.
enumeration	Planet	There are eighth planets in the solar system.
enumeration	Planet.Magnetosphere	The magnetosphere of one of the planets in the solar system.
enumeration	Pluto	The ninth (sub)planet from the sun in our solar system.
enumeration	Rhea	The second-largest moon of Saturn and the ninth largest moon in the Solar System
enumeration	Saturn	The sixth planet from the sun in our solar system.
enumeration	Saturn.Magnetosphere	The magnetosphere of the sixth planet from the sun in our solar system.
enumeration	Sun	The star upon which our solar system is centered.
enumeration	Sun.Chromosphere	The region of the Sun's (or a star's) atmosphere above the temperature minimum and below the Transition Region. The solar chromosphere is approximately 400 km to 2100 km above the photosphere, and characterized by temperatures from 4500 - 28000 K.
enumeration	Sun.Corona	The outermost atmospheric region of the Sun or a star, characterized by ionization temperatures above $10^5$ K. The solar corona starts at about 2100 km above the photosphere; there is no generally defined upper limit.
enumeration	Sun.Interior	The region inside the body which is not visible from outside the body.
enumeration	Sun.Photosphere	The atmospheric layer of the Sun or a star from which continuum radiation, especially optical, is emitted to space. For the Sun, the photosphere is about 500 km thick.
enumeration	Sun.TransitionRegion	A very narrow (<100 km) layer between the chromosphere and the corona where the temperature rises abruptly from about 8000 to about 500,000 K.
enumeration	Titan	The largest moon of Saturn
enumeration	Uranus	The eighth planet from the sun in our solar system.
enumeration	Venus	The second planet from the sun in our solar system.
Used by	Complex Type	Location
Source	<pre>&lt;xsd:element name="ObservatoryRegion" type="enumRegion"&gt;   &lt;xsd:annotation&gt;     &lt;xsd:documentation xml:lang="en"&gt;A spatial location distinguished by certain natural features or physical characteristics where an observatory is located.&lt;/xsd:documentation&gt;   &lt;/xsd:annotation&gt;</pre>	

<pre>&lt;/xsd:element&gt;</pre>
---------------------------------

## Element Latitude

Namespace	http://impex-fp7.oewa.ac.at	
Annotations	The angular distance north (positive) or south (negative) from the equator, measured along the meridian passing through the point.	
Diagram	<p>The diagram shows a class named 'Latitude' with a note below it stating: 'The angular distance north (positive) or south (negative) from the equator, measured along the meridian passing through...'. A relationship arrow points from 'Latitude' to the type 'xsd:double', which is represented by a purple rounded rectangle with a small triangle icon.</p>	
Type	xsd:double	
Properties	content: simple	
Used by	Complex Type	Location
Source	<pre>&lt;xsd:element name="Latitude" type="xsd:double"&gt;   &lt;xsd:annotation&gt;     &lt;xsd:documentation xml:lang="en"&gt;The angular distance north (positive) or south (negative) from the equator, measured along the meridian passing through the point.&lt;/xsd:documentation&gt;   &lt;/xsd:annotation&gt; &lt;/xsd:element&gt;</pre>	

## Element Longitude

Namespace	http://impex-fp7.oewa.ac.at	
Annotations	The angular distance measured west (positive) or east (negative) from a north-south line called the Prime Meridian.	
Diagram	<p>The diagram shows a class named 'Longitude' with a note below it stating: 'The angular distance measured west (positive) or east (negative) from a north-south line called the Prime Meridian.'. A relationship arrow points from 'Longitude' to the type 'xsd:double', which is represented by a purple rounded rectangle with a small triangle icon.</p>	
Type	xsd:double	
Properties	content: simple	
Used by	Complex Type	Location
Source	<pre>&lt;xsd:element name="Longitude" type="xsd:double"&gt;   &lt;xsd:annotation&gt;     &lt;xsd:documentation xml:lang="en"&gt;The angular distance measured west (positive) or east (negative) from a north-south line called the Prime Meridian.&lt;/xsd:documentation&gt;   &lt;/xsd:annotation&gt; &lt;/xsd:element&gt;</pre>	

## Element Elevation

Namespace	http://impex-fp7.oewa.ac.at	
Annotations	The distance in meters above (positive) or below (negative) the "zero elevation" defined by the World Geodetic System reference frame (WGS84).	
Diagram	<p>The diagram shows a class named 'Elevation' with a note below it stating: 'The distance in meters above (positive) or below (negative) the "zero elevation" defined by the World Geodetic System...'. A relationship arrow points from 'Elevation' to the type 'xsd:double', which is represented by a purple rounded rectangle with a small triangle icon.</p>	
Type	xsd:double

## Element ClassificationMethod

Namespace	http://impexfp7.oeaw.ac.at
Annotations	The technique used to determine the characteristics of an object.
Diagram	<p>The diagram shows a rounded rectangle labeled "ClassificationMethod" with a small "Type" label below it. A line connects it to a rounded rectangle labeled "enumClassificationMethod". A callout bubble points to "ClassificationMethod" with the text "The technique used to determine the characteristics of an object.". Another callout bubble points to "enumClassificationMethod" with the text "Identifiers for the technique used to determine the characteristics of an object.".</p>
Type	enumClassificationMethod
Properties	content: simple

Facets	enumeration	Automatic	Determined by the analysis or assessment performed by a program or server.
	enumeration	Inferred	Determined by the analysis of other information or resources.
	enumeration	Inspection	Determined by the analysis or assessment performed by a person.
Used by	Complex Type	Annotation	
Source	<pre>&lt;xsd:element name="ClassificationMethod" type="enumClassificationMethod"&gt;   &lt;xsd:annotation&gt;     &lt;xsd:documentation xml:lang="en"&gt;The technique used to determine the characteristics of an object.&lt;/xsd:documentation&gt;   &lt;/xsd:annotation&gt; &lt;/xsd:element&gt;</pre>		

## Element ConfidenceRating

Namespace	http://impexfp7.oeaw.ac.at		
Annotations	A classification of the certainty of an assertion.		
Diagram	<p>A classification of the certainty of an assertion.</p>		
Type	enumConfidenceRating		
Properties	content: simple		
Facets	enumeration	Probable	Likely given the available evidence. Considered in the range of 4-7 on a scale of 0-10.
	enumeration	Strong	Highly likely given the available evidence. Considered in the range of 7-10 on a scale of 0-10.
	enumeration	Unlikely	Not likely given the available evidence. Considered in the range of 0 on a scale of 0-10.
	enumeration	Weak	Slightly likely given the available evidence. Considered in the range of 1-4 on a scale of 0-10.
Used by	Complex Type	Annotation	
Source	<pre>&lt;xsd:element name="ConfidenceRating" type="enumConfidenceRating"&gt;   &lt;xsd:annotation&gt;     &lt;xsd:documentation xml:lang="en"&gt;A classification of the certainty of an assertion.&lt;/xsd:documentation&gt;   &lt;/xsd:annotation&gt; &lt;/xsd:element&gt;</pre>		

## Element ObservationExtent

Namespace	http://impexfp7.oeaw.ac.at
-----------	----------------------------

Diagram	<pre> classDiagram     class ObservationExtent {         ObservedRegion         StartLocation         StopLocation         Note     }     ObservationExtent &lt; -- ObservationExtent     </pre> <p>The spatial area encompassed by an observation.</p>
Type	ObservationExtent
Properties	content: complex
Used by	Complex Type Annotation
Model	ObservedRegion{0,1} , StartLocation , StopLocation , Note*
Children	Note, ObservedRegion, StartLocation, StopLocation
Instance	<pre> &lt;ObservationExtent xmlns="http://impex-fp7.oeaw.ac.at"&gt;   &lt;ObservedRegion&gt;{0,1}&lt;/ObservedRegion&gt;   &lt;StartLocation&gt;{1,1}&lt;/StartLocation&gt;   &lt;StopLocation&gt;{1,1}&lt;/StopLocation&gt;   &lt;Note&gt;{0,unbounded}&lt;/Note&gt; &lt;/ObservationExtent&gt; </pre>

Attributes defined in the resource override attributes of the parent in the manner prescribed by the containing resource.&lt;/xsd:documentation&gt;   &lt;/xsd:annotation&gt; &lt;/xsd:element&gt;</pre>	

## Element ParticleQuantity

Namespace	http://impexfp7.oeaw.ac.at	
Annotations	A characterization of the physical properties of the particle.	
Diagram	<p>The diagram shows a UML class named "ParticleQuantity" with a multiplicity of 0..1. It has a directed association to another class named "enumParticleQuantity" with a multiplicity of 1..1. A callout box under "ParticleQuantity" states: "A characterization of the physical properties of the particle." A callout box under "enumParticleQuantity" states: "Identifiers for the characterization of the physical properties of the particle."</p>	
Type	enumParticleQuantity	

Properties	content:	simple	
Facets	enumeration	ArrivalDirection	An angular measure of the direction from which an energetic particle or photon was incident on a detector. The angles may be measured in any coordinate system.
	enumeration	AtomicNumberDetected	The number of protons in the nucleus of an atom as determined by a detector.
	enumeration	AverageChargeState	A measure of the composite deficit (positive) or excess (negative) of electrons with respect to protons.
	enumeration	ChargeState	Charge of a fully or partially stripped ion, in units of the charge of a proton. Charge state of a bare proton = 1.
	enumeration	CountRate	The number of events per unit time.
	enumeration	Counts	The number of detection events occurring in a detector over the detector accumulation time.
	enumeration	Energy	The capacity for doing work as measured by the capability of doing work (potential energy) or the conversion of this capability to motion (kinetic energy)
	enumeration	EnergyDensity	The amount of energy per unit volume.
	enumeration	EnergyFlux	The amount of energy passing through a unit area in a unit time.
	enumeration	FlowSpeed	The rate at which particles or energy is passing through a unit area in a unit time.
	enumeration	FlowVelocity	The volume of matter passing through a unit area perpendicular to the direction of flow in a unit of time.
	enumeration	Fluence	The time integral of a flux. A fluence does not have any "per unit time" in its units.
	enumeration	Gyrofrequency	The number of gyrations around a magnetic guiding center (field line) a charged particle makes per unit time due to the Lorentz force.
	enumeration	HeatFlux	Flow of thermal energy through a gas or plasma; typically computed as third moment of a distribution function.
	enumeration	Mass	The measure of inertia (mass) of individual objects (e.g., aerosols).
	enumeration	MassDensity	The mass of particles per unit volume.
	enumeration	MassNumber	The total number of protons and neutrons (together known as nucleons) in an atomic nucleus.
	enumeration	NumberDensity	The number of particles per unit volume.
	enumeration	NumberFlux	The number of particles passing a unit area in unit time, possibly also per unit energy (or equivalent) and/or per unit look direction.
	enumeration	ParticleRadius	The mean radius for a Gaussian distribution of particles with an axial ratio of 2 and a distribution width that varies as 0.5 radius. A value of zero means no cloud was detected.
	enumeration	PhaseSpaceDensity	The number of particles per unit volume in the six-dimensional space of position and velocity.
	enumeration	PlasmaFrequency	A number-density-dependent characteristic frequency of a plasma.
	enumeration	Pressure	The force per unit area exerted by a particle distribution or field.
	enumeration	SonicMachNumber	The ratio of the bulk flow speed to the speed of sound in the medium.
	enumeration	SoundSpeed	The speed at which sound travels through a medium.
	enumeration	Temperature	A measure of the kinetic energy of random motion with respect to the average. Temperature is properly defined only for an equilibrium particle distribution (Maxwellian distribution).

	enumeration	ThermalSpeed	For a Maxwellian distribution, the difference between the mean speed and the speed within which ~69% (one sigma) of all the members of the speed distribution occur.
	enumeration	Velocity	Rate of change of position. Also used for the average velocity of a collection of particles, also referred to as "bulk velocity".
Used by	Complex Type	Particle

## Element RelativeStopDate

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	An indication of the nominal end date relative to the present.
Diagram	<p>The diagram illustrates the UML class structure for the <code>RelativeStopDate</code> element. It shows <code>RelativeStopDate</code> as a class with a multiplicity of 1..1, associated with the <code>xsd:duration</code> type. <code>xsd:duration</code> is represented as a built-in primitive type that represents a duration of time. This type is part of a substitution group named <code>StopDateEntity</code>, which is marked as abstract and true.</p>
Type	xsd:duration
Properties	content: simple
Substitution Group Affiliation	• StopDateEntity
Source	<pre>&lt;xsd:element name="RelativeStopDate" type="xsd:duration" substitutionGroup="StopDateEntity"&gt;   &lt;xsd:annotation&gt;     &lt;xsd:documentation xml:lang="en"&gt;An indication of the nominal end date relative to the present.&lt;/xsd:documentation&gt;   &lt;/xsd:annotation&gt; &lt;/xsd:element&gt;</pre>

## Element Granule

Within a phrase the circumflex (^) is used to indicate a power, a star (*) is used to indicate multiplication and a slash (/) division. When symbols are not separated by a mathematical operator, multiplication is assumed. Symbols for base units can be found at: &lt;<a href="http://www.bipm.fr/en/si/si_brochure/chapter2/2-1/#symbols">http://www.bipm.fr/en/si/si_brochure/chapter2/2-1/#symbols</a>&gt; and those for common derived units can be found at: &lt;<a href="http://www.bipm.fr/en/si/derived_units/2-2-2.html">http://www.bipm.fr/en/si/derived_units/2-2-2.html</a>&gt;</p>		
	<b>UnitsConversion</b>	xsd:string	optional
	<p>The multiplicative factor for converting a unit into International System of Units (SI) units. The factor is expressed in the form "number &gt; x", where "number" is a numerical value and "x" is the appropriate SI units. The basic SI units are Enumerated: m (meter), N (newton), kg (kilogram), Pa (pascal), s (second), Hz (hertz), A (ampere), V (volt), K (kelvin), W (watt), rad (radian), J (joule), sr (steradian), C (coulomb), T (tesla), ohm (ohm), mho (mho or seimens), H (henry), and F (farad). Two useful units which are not SI units are: degree (angle), and unitless (no units). An example is: "1.0E-5&gt;T" which converts the units, presumably nT, to tesla. Another example is: "1.0e+3&gt;m/s" which converts a velocity expressed in kilometers per second to meters per second.</p>		
Source	<pre>&lt;xsd:element name="PopulationTemperature" type="InputValue"&gt;   &lt;xsd:annotation&gt;     &lt;xsd:documentation xml:lang="en"&gt;A measure of the kinetic energy of random motion with respect to the average. Temperature is properly defined only for an equilibrium particle distribution (Maxwellian distribution).&lt;/xsd:documentation&gt;   &lt;/xsd:annotation&gt; &lt;/xsd:element&gt;</pre>		

## Element PopulationFlowSpeed

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	The rate at which particles or energy is passing through a unit area in a unit time.
Diagram	<pre> classDiagram     class PopulationFlowSpeed {         &lt;&lt;Type InputValue&gt;&gt;     }     class InputValue {         &lt;&lt;Mixed true&gt;&gt;     }     PopulationFlowSpeed &lt; -- InputValue     PopulationFlowSpeed &lt; -- Attributes     class Attributes {         &lt;&lt;@ Units         Type xsd:string         &gt;&gt;     }     class UnitsConversion {         &lt;&lt;@ UnitsConversion         Type xsd:string         &gt;&gt;     }     PopulationFlowSpeed --&gt;  Attributes     PopulationFlowSpeed --&gt;  UnitsConversion   </pre> <p>The rate at which particles or energy is passing through a unit area in a unit time.</p>
Type	InputValue
Properties	content: complex

	mixed:	true	
Used by	Complex Type	InputPopulation	
Model			
Attributes	QName	Type	Use
	Units	xsd:string	optional
		A description of the standardized measurement increments in which a value is specified. The description is represented as a mathematical phrase. Units should be represented by widely accepted representation. For example, units should conform to the International System of Units (SI) which is maintained by BIPM (Bureau International des Poids et Mesures (see < <a href="http://www.bipm.fr/">http://www.bipm.fr/</a> > ) when appropriate or use tokens like "Re" to represent units of the Radius of the Earth. Within a phrase the circumflex (^) is used to indicate a power, a star (*) is used to indicate multiplication and a slash (/) division. When symbols are not separated by a mathematical operator, multiplication is assumed. Symbols for base units can be found at: < <a href="http://www.bipm.fr/en/si/si_brochure/chapter2/2-1/#symbols">http://www.bipm.fr/en/si/si_brochure/chapter2/2-1/#symbols</a> > and those for common derived units can be found at: < <a href="http://www.bipm.fr/en/si/derived_units/2-2-2.html">http://www.bipm.fr/en/si/derived_units/2-2-2.html</a> >	
	UnitsConversion	xsd:string	optional
		The multiplicative factor for converting a unit into International System of Units (SI) units. The factor is expressed in the form "number > x", where "number" is a numerical value and "x" is the appropriate SI units. The basic SI units are Enumerated: m (meter), N (newton), kg (kilogram), Pa (pascal), s (second), Hz (hertz), A (ampere), V (volt), K (kelvin), W (watt), rad (radian), J (joule), sr (steradian), C (coulomb), T (tesla), ohm (ohm), mho (mho or seimens), H (henry), and F (farad). Two useful units which are not SI units are: degree (angle), and unitless (no units). An example is: "1.0E-5>T" which converts the units, presumably nT, to tesla. Another example is: "1.0e+3>m/s" which converts a velocity expressed in kilometers per second to meters per second.

**Element ProductionRate**

Namespace	http://impex-fp7.oeaw.ac.at		
Diagram	<p>The diagram illustrates the UML class structure for the <code>ProductionRate</code> element. It is defined as a subtype of <code>InputValue</code>. The class has two attributes: <code>Units</code> (of type <code>xsd:string</code>) and <code>UnitsConversion</code> (of type <code>xsd:string</code>). A note for <code>Units</code> states: "A description of the standardized measurement increments in which a value is specified. The description is represented...". A note for <code>UnitsConversion</code> states: "The multiplicative factor for converting a unit into International System of Units (SI) units. The factor is expressed...".</p>

## Complex Type(s)

### Complex Type Spase

Namespace	http://impex-fp7.oeaw.ac.at								
Annotations	Space Physics Archive Search and Extract (SPASE). The outermost container or envelope for SPASE metadata. This indicates the start of the SPASE metadata.								
Diagram	<p>The diagram shows the 'Spase' complex type. It has attributes: '@ lang' (xsd:string, default: en) and 'Version' (enumVersion). It also contains a sequence of 'ResourceEntity' (Abstract: true) with multiplicity 1..∞. A note states: 'Indicates the release identifier. When used to indicate the release of the SPASE data model, it is a in the form...'. A detailed note for 'ResourceEntity' says: 'Space Physics Archive Search and Extract (SPASE). The outermost container or envelope for SPASE metadata. This indicates the start of the SPASE metadata.'</p>								
Used by	Element Spase								
Model	Version , ResourceEntity+								
Children	ResourceEntity, Version								
Attributes	<table border="1"> <thead> <tr> <th>QName</th> <th>Type</th> <th>Default</th> <th>Use</th> </tr> </thead> <tbody> <tr> <td>lang</td> <td>xsd:string</td> <td>en</td> <td>optional</td> </tr> </tbody> </table>	QName	Type	Default	Use	lang	xsd:string	en	optional
QName	Type	Default	Use

## Complex Type Catalog

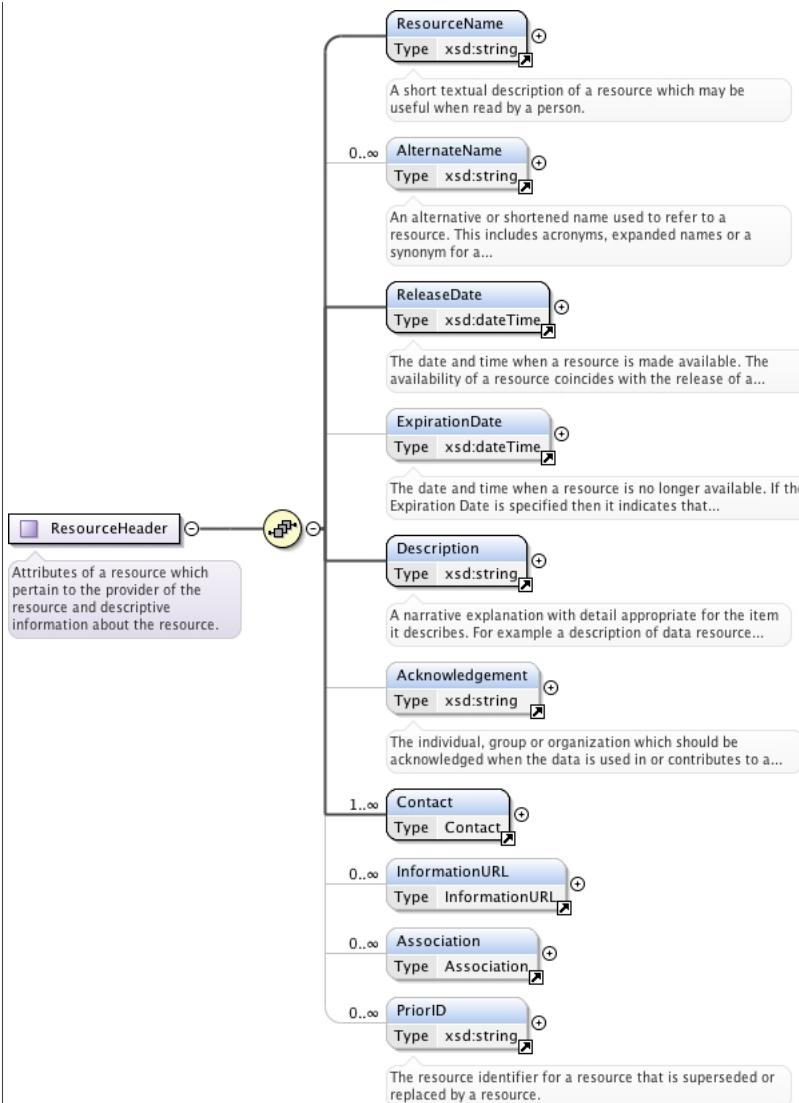

Namespace	http://impexfp7.oeaw.ac.at
Annotations	<p>A tabular listing of events or observational notes, especially those that have utility in aiding a user in locating data. Catalogues include lists of events, files in a product, and data availability. A Catalog resource is a type of "data product" which is a set of data that is uniformly processed and formatted, from one or more instruments, typically spanning the full duration of the observations of the relevant instrument(s). A data product may consist of a collection of granules of successive time spans, but may be a single high-level entity.</p>
Diagram	<pre> classDiagram     class Catalog {         &lt;&lt;A tabular listing of events or observational notes, especially those that have utility in aiding a user in locating...&gt;&gt;     }     class ResourceID     class ResourceHeader     class AccessInformation     class ProviderResourceName     class ProviderVersion     class InstrumentID     class PhenomenonType     class TimeSpan     class Caveats     class Keyword     class InputResourceID     class Parameter     class Extension      Catalog "1..oo" -- "1" ResourceID :      Catalog "1..oo" -- "1" ResourceHeader :      Catalog "1..oo" -- "1" AccessInformation :      Catalog "1..oo" -- "1" ProviderResourceName :      Catalog "1..oo" -- "1" ProviderVersion :      Catalog "0..oo" -- "1..oo" InstrumentID :      Catalog "1..oo" -- "1" PhenomenonType :      Catalog "1..oo" -- "1" TimeSpan :      Catalog "1..oo" -- "1" Caveats :      Catalog "0..oo" -- "1" Keyword :      Catalog "0..oo" -- "1" InputResourceID :      Catalog "0..oo" -- "1" Parameter :      Catalog "0..oo" -- "1" Extension : </pre>

## Complex Type DisplayData

Namespace	http://impexfp7.oeaw.ac.at
Annotations	A graphical representation of data wherein the underlying numeric values are not (readily) accessible for analysis.. Examples are line plots and spectrograms. A Display Data resource is a type of "data product" which is a set of data that is uniformly processed and formatted, from one or more instruments, typically spanning the full duration of the observations of the relevant instrument(s). A data product may consist of a collection of granules of successive time spans, but may be a single high-level entity.

## Complex Type OperatingSpan

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	The interval in time from the first point at which an instrument or spacecraft was producing and sending data until the last such time, ignoring possible gaps.
Diagram	<p>The diagram illustrates the structure of the <code>OperatingSpan</code> complex type. It features a central node labeled <code>OperatingSpan</code> with three outgoing associations. One association points to <code>StartDate</code>, another to <code>StopDate</code>, and the third to <code>Note</code>. Each association is accompanied by a description of its purpose: <code>StartDate</code> is the specification of a starting point in time, <code>StopDate</code> is the specification of a stopping point in time, and <code>Note</code> is information which is useful or important for the understanding of a value or parameter.</p>
Used by	Element <code>OperatingSpan</code>

## Complex Type Granule

Namespace	<a href="http://impex-fp7.oeaw.ac.at">http://impex-fp7.oeaw.ac.at</a>
Annotations	<p>An accessible portion of another resource. A Granule may be composed of one or more physical pieces (files) which are considered inseparable. For example, a data storage format that maintains metadata and binary data in separate, but tightly coupled files. Granules should not be used to group files that have simple relationships or which are associated through a parent resource. For example, each file containing a time interval data for a Numerical Data resource would each be considered a Granule. The ParentID of a Granule resource must be a NumericalData resource. The attributes of a Granule supersede the corresponding attributes in the NumericalData resource.</p>

## Complex Type NumericalOutput

Namespace	<a href="http://impex-fp7.oeaw.ac.at">http://impex-fp7.oeaw.ac.at</a>
Annotations	Data stored as numerical values in a specified format. A Numerical Data resource is a type of "data product" which is a set of data that is uniformly processed and formatted, from one or more instruments, typically spanning the full duration of the observations of the relevant instrument(s). A data product may consist of a collection of granules of successive time spans, but may be a single high-level entity.

--------	---

## Simple Type(s)

### Simple Type enumVersion

Namespace	http://impex-fp7.oeaw.ac.at	
Annotations	Version number.	
Diagram		
Type	restriction of xsd:string	
Facets	enumeration	2.2.2
Used by	Element	Version
Source	<pre> &lt;xsd:simpleType name="enumVersion"&gt;   &lt;xsd:annotation&gt;     &lt;xsd:documentation xml:lang="en"&gt;Version number.&lt;/xsd:documentation&gt;   &lt;/xsd:annotation&gt;   &lt;xsd:restriction base="xsd:string"&gt;     &lt;xsd:enumeration value="2.2.2"/&gt;   &lt;/xsd:restriction&gt; &lt;/xsd:simpleType&gt;</pre>	

### Simple Type ResourceID

Namespace	http://impex-fp7.oeaw.ac.at	
Annotations	A Resource ID is a URI that has the form "scheme://authority/path" where "scheme" is "spase" for those resources administered through the SPASE framework, "authority" is the unique identifier for the resource provider registered within the SPASE framework and "path" is the unique identifier of the resource within the context of the "authority". The resource ID must be unique within the SPASE framework.	
Diagram		
Type	xsd:string	
Used by	Element	ResourceID
Source	<pre> &lt;xsd:simpleType name="ResourceID"&gt;   &lt;xsd:annotation&gt;     &lt;xsd:documentation xml:lang="en"&gt;A Resource ID is a URI that has the form "scheme://authority/path" where "scheme" is "spase" for those resources administered through the SPASE framework, "authority" is the unique identifier for the resource provider registered within the SPASE framework and "path" is the unique identifier of the resource within the context of the "authority". <pre>&lt;/xsd:simpleType&gt;</pre>
------------------------------------

## Simple Type enumRole

Namespace	http://impex-fp7.oeaw.ac.at	
Annotations	Identifiers for the assigned or assumed function or position of an individual.	
Diagram	 <p>Identifiers for the assigned or assumed function or position of an individual.</p> <p>Built-in primitive type. The string datatype represents character strings in XML.</p>	
Type	restriction of xsd:string	
Facets	enumeration	ArchiveSpecialist An individual who is an expert on a collection of resources and may also be knowledgeable of the phenomenon and related physics represented by the resources. This includes librarians, curators, archive scientists and other experts.
	enumeration	CoInvestigator An individual who is a scientific peer and major participant in an investigation.
	enumeration	Contributor An entity responsible for making contributions to the content of the resource.
	enumeration	DataProducer An individual who generated the resource and is familiar with its provenance.
	enumeration	DeputyPI An individual who is an administrative or scientific leader for an investigation operating under the supervision of a Principal Investigator.
	enumeration	FormerPI An individual who had served as the administrative and scientific lead for an investigation, but no longer assumes that role.
	enumeration	GeneralContact An individual who can provide information on a range of subjects or who can direct you to a domain expert.
	enumeration	MetadataContact An individual who can affect a change in the metadata describing a resource.
	enumeration	PrincipalInvestigator An individual who is the administrative and scientific lead for an investigation.
	enumeration	ProjectScientist An individual who is an expert in the phenomenon and related physics explored by the project. A project scientist may also have a managerial role within the project.
	enumeration	Publisher An individual, organization, institution or government department responsible for the production and dissemination of a document.
	enumeration	Scientist An individual who is an expert in the phenomenon and related physics represented by the resource.
	enumeration	TeamLeader An individual who is the designated leader of an investigation.
	enumeration	TeamMember An individual who is a major participant in an investigation.
	enumeration	TechnicalContact An individual who can provide specific information with regard to the resource or supporting software
Used by	Element	Role

enumeration	AVI	Audio Video Interleave (AVI) a digital format for movies that conforms to the Microsoft Windows Resource Interchange File Format (RIFF).																																																						
enumeration	Binary	A direct representation of the bits which may be stored in memory on a computer.																																																						
enumeration	CDF	Common Data Format (CDF). A binary storage format developed at Goddard Space Flight Center (GSFC).																																																						
enumeration	CEF	Cluster Exchange Format (CEF) is a self-documenting ASCII format designed for the exchange of data. There are two versions of CEF which are not totally compatible.																																																						
enumeration	CEF1	Cluster Exchange Format (CEF), version 1, is a self-documenting ASCII format designed for the exchange of data. The metadata contains information compatible with the ISTP recommendations for CDF.																																																						
enumeration	CEF2	Cluster Exchange Format (CEF), version 2, is a self-documenting ASCII format designed for the exchange of data and introduced for Cluster Active Archive. Compared to version 1, the metadata description of vectors and tensors is different.																																																						
enumeration	Excel	A Microsoft spreadsheet format used to hold a variety of data in tables which can include calculations.																																																						
enumeration	FITS	Flexible Image Transport System (FITS) is a digital format primarily designed to store scientific data sets consisting of multi-dimensional arrays (1-D spectra, 2-D images or 3-D data cubes) and 2-dimensional tables containing rows and columns of data.																																																						
enumeration	GIF	Graphic Interchange Format (GIF) first introduced in 1987 by CompuServe. GIF uses LZW compression and images are limited to 256 colours.																																																						
enumeration	HDF	Hierarchical Data Format																																																						
enumeration	HDF4	Hierarchical Data Format, Version 4																																																						
enumeration	HDF5	Hierarchical Data Format, Version 5																																																						
enumeration	HTML	A text file containing structured information represented in the HyperText Mark-up Language (HTML). See < <a href="http://www.w3.org/MarkUp/">http://www.w3.org/MarkUp/</a> >																																																						
enumeration	Hardcopy	A permanent reproduction, or copy in the form of a physical object, of any media suitable for direct use by a person.																																																						
enumeration	Hardcopy.Film	An image recording medium on which usually a "negative" analog image is registered. A "positive" image can be recovered or reproduced from film, which is usually made of flexible materials for ease of storage and transportation.																																																						
enumeration	Hardcopy.Microfiche	A sheet of microfilm on which many pages of material have been photographed; a magnification system is used to read the material.																																																						
enumeration	Hardcopy.Microfilm	Film rolls on which materials are photographed at greatly reduced size; a magnification system is used to read the material.																																																						
enumeration	Hardcopy.Photograph	An image (positive or negative) registered																																																						

		on a piece of photo-sensitive paper
enumeration	Hardcopy.PhotographicPlate	A rigid (typically glass) medium that functions like film. Its rigidity is for guarding against image distortion due to medium deformation (caused by heat and humidity). Photographic plates are often used for astronomical photography.
enumeration	Hardcopy.Print	A sheet of any written or printed material which may include notes or graphics. Multiple printed pages may be bound into a manuscript or book.
enumeration	IDFS	Instrument Data File Set (IDFS) is a set of files written in a prescribed format which contain data, timing data, and meta-data. IDFS was developed at Southwest Research Institute (SwRI).
enumeration	IDL	Interactive Data Language (IDL) save set. IDL is a proprietary format.
enumeration	JPEG	A binary format for still images defined by the Joint Photographic Experts Group
enumeration	MATLAB_4	MATLAB Workspace save set, version 4. MAT-files are double-precision, binary, MATLAB format files. MATLAB is a proprietary product of The MathWorks.
enumeration	MATLAB_6	MATLAB Workspace save set, version 6. MAT-files are double-precision, binary, MATLAB format files. MATLAB is a proprietary product of The MathWorks.
enumeration	MATLAB_7	MATLAB Workspace save set, version 7. MAT-files are double-precision, binary, MATLAB format files. Version 7 includes data compression and Unicode encoding. MATLAB is a proprietary product of The MathWorks.
enumeration	MPEG	A digital format for movies defined by the Motion Picture Experts Group
enumeration	NCAR	The National Center for Atmospheric Research (NCAR) format. A complete description of that standard is given in appendix C of the "Report on Establishment & Operation of the Incoherent-Scatter Data Base", dated August 23, 1984, obtainable from NCAR, P.O. Box 3000 Boulder, Colorado 80307-3000.
enumeration	NetCDF	Unidata Program Center's Network Common Data Form (NetCDF). A self-describing portable data format for array-oriented data access. See < <a href="http://my.unidata.ucar.edu/content/software/netcdf">http://my.unidata.ucar.edu/content/software/netcdf</a> >
enumeration	PDF	A document expressed in the Portable Document Format (PDF) as defined by Adobe.
enumeration	PNG	A digital format for still images. Portable Network Graphics (PNG)
enumeration	Postscript	A page description programming language created by Adobe Systems Inc. that is a device-independent industry standard for representing text and graphics.
enumeration	QuickTime	A format for digital movies, as defined by Apple Computer. See < <a href="http://developer.apple.com/quicktime/">http://developer.apple.com/quicktime/</a> >
enumeration	TIFF	A binary format for still pictures. Tagged Image Format File (TIFF). Originally developed by Aldus and now controlled by Adobe.
enumeration	Text	A sequence of characters which may have an imposed structure or organization.
enumeration	Text.ASCII	A sequence of characters that adheres to American Standard Code for Information Interchange (ASCII) which is an 7-bit character-coding scheme.
enumeration	Text.Unicode	Text in multi-byte Unicode format.
enumeration	UDF	Universal Data Format (UDF). The Optical Technology

		Storage Association's Universal Disk Format, based on ISO 13346. See < <a href="http://www.osta.org/specs/index.htm">http://www.osta.org/specs/index.htm</a> >

## Simple Type enumEncoding

Namespace	<a href="http://impex-fp7.oeaw.ac.at">http://impex-fp7.oeaw.ac.at</a>		
Annotations	Identifiers for unambiguous rules that establishes the representation of information within a file.		
Diagram	<pre> classDiagram     class enumEncoding     class xsd:string     enumEncoding "1" -- "0..1" xsd:string   </pre> <p>Identifiers for unambiguous rules that establishes the representation of information within a file.</p> <p>Built-in primitive type. The string datatype represents character strings in XML.</p>		
Type	restriction of xsd:string		
Facets	enumeration	ASCII	A sequence of characters that adheres to American Standard Code for Information Interchange (ASCII) which is an 7-bit character-coding scheme.
	enumeration	BZIP2	An open standard algorithm by Julian Seward using Burrows-Wheeler block sorting and Huffman coding. See < <a href="http://www.bzip.org/">http://www.bzip.org/</a> >
	enumeration	Base64	A data encoding scheme whereby binary-encoded data is converted to printable ASCII characters. It is defined as a MIME content transfer encoding for use in Internet e-mail. The only characters used are the upper- and lower-case Roman alphabet characters (A-Z, a-z), the numerals (0-9), and the "+" and "/" symbols, with the "=" symbol as a special suffix (padding) code.
	enumeration	GZIP	An open standard algorithm distributed by GNU based on LZ77 and Huffman coding. See < <a href="http://www.gnu.org/software/gzip/gzip.html">http://www.gnu.org/software/gzip/gzip.html</a> > or < <a href="http://www.gzip.org/">http://www.gzip.org/</a> >
	enumeration	None	A lack or absence of anything.
	enumeration	S3_BUCKET	A container of objects that comply with the Amazon Simple Storage Service (S3) specifications. A bucket has a unique, user-assigned key (name). A bucket can contain any number of objects with an aggregate size of 5 gigabytes. A bucket may be accompanied by up to 2 kilobytes of metadata.
	enumeration	TAR	A file format used to collate collections of files into one larger file, for distribution or archiving, while preserving file system information such as user and group permissions, dates, and directory structures. The format was standardized by POSIX.1-1988 and later POSIX.1-2001.

	enumeration	Unicode	Text in multi-byte Unicode format.
	enumeration	ZIP	An open standard for compression which is a variation of the LZW method and was originally used in the PKZIP utility.
Used by	Element	Encoding

It is defined as a MIME content transfer encoding for use in Internet e-mail. The only characters used are the upper- and lower-case Roman alphabet characters (A-Z, a-z), the numerals (0-9), and the "+" and "/" symbols, with the "=" symbol as a special suffix (padding) code.&lt;/xsd:documentation&gt;       &lt;/xsd:annotation&gt;     &lt;/xsd:enumeration&gt;     &lt;xsd:enumeration value="GZIP"&gt;       &lt;xsd:annotation&gt;         &lt;xsd:documentation xml:lang="en"&gt;An open standard algorithm distributed by GHU based on LZ77 and Huffman coding. See &lt;a href="http://www.gnu.org/software/gzip/gzip.html" style="color: blue;"&gt;&lt;/a&gt; or &lt;a href="http://www.gzip.org/"&gt;&lt;/a&gt;&lt;/xsd:documentation&gt;       &lt;/xsd:annotation&gt;     &lt;/xsd:enumeration&gt;     &lt;xsd:enumeration value="None"&gt;       &lt;xsd:annotation&gt;         &lt;xsd:documentation xml:lang="en"&gt;A lack or absence of anything.&lt;/xsd:documentation&gt;       &lt;/xsd:annotation&gt;     &lt;/xsd:enumeration&gt;     &lt;xsd:enumeration value="S3_BUCKET"&gt;       &lt;xsd:annotation&gt;         &lt;xsd:documentation xml:lang="en"&gt;A container of objects that comply with the Amazon Simple Storage Service (S3) specifications. A bucket has a unique, user-assigned key (name). A bucket can contain any number of objects with an aggregate size of 5 gigabytes. A bucket may be accompanied by up to 2 kilobytes of metadata.&lt;/xsd:documentation&gt;       &lt;/xsd:annotation&gt;     &lt;/xsd:enumeration&gt;     &lt;xsd:enumeration value="TAR"&gt;       &lt;xsd:annotation&gt;         &lt;xsd:documentation xml:lang="en"&gt;A file format used to collate collections of files into one larger file, for distribution or archiving, while preserving file system information such as user and group permissions, dates, and directory structures. The format was standardized by POSIX.1-1988 and later POSIX.1-2001.&lt;/xsd:documentation&gt;       &lt;/xsd:annotation&gt;     &lt;/xsd:enumeration&gt;     &lt;xsd:enumeration value="Unicode"&gt;       &lt;xsd:annotation&gt;         &lt;xsd:documentation xml:lang="en"&gt;Text in multi-byte Unicode format.&lt;/xsd:documentation&gt;       &lt;/xsd:annotation&gt;     &lt;/xsd:enumeration&gt;     &lt;xsd:enumeration value="ZIP"&gt;       &lt;xsd:annotation&gt;         &lt;xsd:documentation xml:lang="en"&gt;An open standard for compression which is a variation of the LZW method and was originally used in the PKZIP utility.&lt;/xsd:documentation&gt;       &lt;/xsd:annotation&gt;     &lt;/xsd:enumeration&gt;   &lt;/xsd:restriction&gt; &lt;/xsd:simpleType&gt;</pre>		

### Simple Type enumPhenomenonType

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	Identifiers for the characteristics or categorization

	of an observation. Note: Joe King to provide.		
Diagram	 <p>enumPhenomenonType</p> <p>Identifiers for the characteristics or categorization of an observation. Note: Joe King to provide.</p> <p>xsd:string</p> <p>Built-in primitive type. The string datatype represents character strings in XML.</p>		
Type	restriction of xsd:string		
Facets	enumeration	ActiveRegion	A localized, transient volume of the solar atmosphere in which PLAGES, SUNSPOTS, FACULAE, FLAREs, etc. may be observed.
	enumeration	Aurora	An atmospheric phenomenon consisting of bands of light caused by charged solar particles following the earth's magnetic lines of force.
	enumeration	BowShockCrossing	A crossing of the boundary between the undisturbed (except for foreshock effects) solar wind and the shocked, decelerated solar wind of the magnetosheath.
	enumeration	CoronalHole	An extended region of the corona, exceptionally low in density and associated with unipolar photospheric regions. A coronal hole can be an "open" magnetic field in the corona and (perhaps) inner heliosphere which has a faster than average outflow (wind); A region of lower than "quiet" ion and electron density in the corona; or a region of lower peak electron temperature in the corona than in the "quiet" corona.
	enumeration	CoronalMassEjection	A solar event (CME) that involves a burst of plasma ejected into the interplanetary medium. CME's may be observed remotely relatively near the sun or in situ in the interplanetary medium. The latter type of observations are often referred to as Interplanetary CME's (ICME's).
	enumeration	EITWave	A wave in the corona of the Sun which produce shock waves on the Sun's chromosphere (Moreton Waves). EIT Waves are produced by large solar flare and expand outward at about 1,000 km/s. It usually appears as a slowly moving diffuse arc of brightening in H-alpha, and may travel for several hundred thousand km.
	enumeration	EnergeticSolarParticleEvent	An enhancement of interplanetary fluxes of energetic ions accelerated by interplanetary shocks and/or solar flares.
	enumeration	ForbushDecrease	A rapid decrease in the observed galactic cosmic ray intensity following the passage of an outwardly convecting interplanetary magnetic field disturbance, such as those associated with large CME's, that sweep some galactic cosmic rays away from Earth.
	enumeration	GeomagneticStorm	A magnetospheric disturbance typically defined by variations in the horizontal component of the Earth's surface magnetic field. The variation typically starts with a field enhancement associated with a solar wind pressure pulse and continues with a field depression associated with an enhancement of the diamagnetic magnetospheric ring current.
	enumeration	InterplanetaryShock	A shock propagating generally anti-sunward through the slower solar wind, often seen in front of CME-associated plasma clouds.
	enumeration	MagneticCloud	A transient event observed in the solar wind characterized as a region of enhanced magnetic field strength, smooth rotation of the magnetic field vector and low proton density and temperature.
	enumeration	MagnetopauseCrossing	A crossing of the interface between the shocked solar wind in the magnetosheath and the magnetic field and plasma in the magnetosphere.
	enumeration	RadioBurst	Emissions of the sun in radio wavelengths from centimeters to dekameters, under both

		<p>quiet and disturbed conditions. Radio Bursts can be "Type I" consisting of many short, narrow-band bursts in the metric range (300 - 50 MHz); "Type II" consisting of narrow-band emission that begins in the meter range (300 MHz) and sweeps slowly (tens of minutes) toward dekameter wavelengths (10 MHz); "Type III" consisting of narrow-band bursts that sweep rapidly (seconds) from decimeter to dekameter wavelengths (500 - 0.5 MHz); and "Type IV" consisting of a smooth continuum of broad-band bursts primarily in the meter range (300 - 30 MHz).</p>
enumeration	SectorBoundaryCrossing	<p>A sector boundary crossing is a transit by a spacecraft across the heliospheric current sheet separating the dominantly outward (away-from-the-sun) interplanetary magnetic field of one hemisphere of the heliosphere from the dominantly inward (toward-the-sun) polarity of the other hemisphere.</p> <p>Such crossings have multi-day intervals of opposite IMF dominant polarities on either side.</p>
enumeration	SolarFlare	<p>An explosive event in the Sun's atmosphere which produces electromagnetic radiation across the electromagnetic spectrum at multiple wavelengths from long-wave radio to the shortest wavelength gamma rays.</p>
enumeration	SolarWindExtreme	<p>Intervals of unusually large or small values of solar wind attributes such as flow speed and ion density.</p>
enumeration	StreamInteractionRegion	<p>The region (SIR) where two solar wind streams, typically having differing characteristics and solar sources, abut up against (and possibly partially interpenetrate) each other.</p>
enumeration	Substorm	<p>A process by which plasma in the magnetotail becomes energized at a fast rate.</p>

## Simple Type ParameterKey

Namespace	http://impexfp7.oeaw.ac.at
Annotations	The name or identifier which can be used to access the parameter in the resource. The associated value is dependent on the service used to access the resource. For columnar ASCII data, use "Column_X" for a single-element parameter and "Column_X-Column_Y" for a multi-element parameter, where X and Y are the relevant column index. The first column index is 1.
Diagram	 <p>The name or identifier which can be used to access the parameter in the resource. The associated value is dependent on...</p> <p>Built-in primitive type. The string datatype represents character strings in XML.</p>
Type	xsd:string

## Simple Type enumCoordinateRepresentation

Namespace	http://impexfp7.oeaw.ac.at						
Annotations	Identifiers of the method or form for specifying a given point or vector in a given coordinate system.						
Diagram	 <p>Identifiers of the method or form for specifying a given point or vector in a given coordinate system.</p> <p>Built-in primitive type. The string datatype represents character strings in XML.</p>						
Type	restriction of xsd:string						
Facets	<table border="1"> <tr> <td>enumeration</td> <td>Cartesian</td> <td>A representation in which a position vector or a measured vector (e.g., field or flow) is specified by its components along the base axes of the coordinate system.</td> </tr> <tr> <td>enumeration</td> <td>Cylindrical</td> <td>A coordinate representation of a position vector or measured vector (field or flow) by its k-component, the magnitude of its projection</td> </tr> </table>	enumeration	Cartesian	A representation in which a position vector or a measured vector (e.g., field or flow) is specified by its components along the base axes of the coordinate system.	enumeration	Cylindrical	A coordinate representation of a position vector or measured vector (field or flow) by its k-component, the magnitude of its projection
enumeration	Cartesian	A representation in which a position vector or a measured vector (e.g., field or flow) is specified by its components along the base axes of the coordinate system.					
enumeration	Cylindrical	A coordinate representation of a position vector or measured vector (field or flow) by its k-component, the magnitude of its projection					

		into the i-j plane, and the azimuthal angle of the i-j plane projection.
	enumeration Spherical	A coordinate representation of a position vector or of a measured vector by its magnitude and two direction angles. The angles are relative to the base axes of the coordinate system used. Typically the angles are phi [azimuth angle, =arctan (j/i)] and theta, where theta may be a polar angle, arctan {[SQRT(i^2+j^2)}/k}, or an elevation angle, arctan [k/SQRT (i^2+j^2)].

## Simple Type enumCoordinateSystemName

Namespace	http://impex-fp7.oeaw.ac.at		
Annotations	Identifiers of the origin and orientation of a set of typically orthogonal axes.		
Diagram	<p>Identifiers of the origin and orientation of a set of typically orthogonal axes.</p> <p>Built-in primitive type. The string datatype represents character strings in XML.</p>		
Type	restriction of xsd:string		
Facets	enumeration CGM	Corrected Geomagnetic - A coordinate system from a spatial point with GEO radial distance and geomagnetic latitude and longitude, follow the epoch-appropriate IGRF/DGRF model field vector through to the point where the field line crosses the geomagnetic dipole equatorial plane. Then trace the dipole magnetic field vector Earthward from that point on the equatorial plane, in the same hemisphere as the original point, until the initial radial distance is reached. Designate the dipole latitude and longitude at that point as the CGM latitude and longitude of the original point. See < <a href="http://nssdc.gsfc.nasa.gov/space/cgm/cgmm_des.html">http://nssdc.gsfc.nasa.gov/space/cgm/cgmm_des.html</a> >	
	enumeration Carrington	A coordinate system which is centered at the Sun and is "fixed" with respect to the synodic rotation rate; the mean synodic value is about 27.2753 days. The Astronomical Almanac gives a value for Carrington longitude of 349.03 degrees at 0000 UT on 1 January 1995.	
	enumeration CSO	A generic body-Centered Solar Orbital (CSO) frame	

		<p>related to comets and asteroids. The frame is defined as a two-vector style dynamic frame as follows:</p> <p>The position of the sun relative to the body is the primary vector:</p> <p>the X axis points from the body to the sun.</p> <p>The inertially referenced velocity of the sun relative to the body is the secondary vector:</p> <p>the Y axis is the component of this velocity vector orthogonal to the X axis.</p> <p>The Z axis is X cross Y, completing the right-handed reference frame.</p> <p>All vectors are geometric: no aberration corrections are used.</p>
enumeration	DM	Dipole Meridian - A coordinate system centered at the observation point. Z axis is parallel to the Earth's dipole axis, positive northward. X is in the plane defined by Z and the line linking the observation point with the Earth's center. Y is positive eastward. See < <a href="http://cdpp.cnes.fr/00428.pdf">http://cdpp.cnes.fr/00428.pdf</a> >
enumeration	GEI	Geocentric Equatorial Inertial - A coordinate system where the Z axis is along Earth's spin vector, positive northward. X axis points towards the first point of Aries (from the Earth towards the Sun at the vernal equinox). See Russell, 1971
enumeration	GEO	Geographic - geocentric corotating - A coordinate system where the Z axis is along Earth's spin vector, positive northward. X axis lies in Greenwich meridian, positive towards Greenwich. See Russell, 1971.
enumeration	GPHIO	In this Cartesian coordinate system, X is along the flow direction, Y is along the Ganymede-Jupiter vector, and Z is along the spin axis. These coordinates are analogous to the earth-centered GSE coordinates that relate to the direction of flow of the solar wind onto Earth's environment.
enumeration	GSE	Geocentric Solar Ecliptic - A coordinate system where the X axis is from Earth to Sun. Z axis is normal to the ecliptic, positive northward. See Russell, 1971.
enumeration	GSEQ	Geocentric Solar Equatorial - A coordinate system where the X axis is from Earth to Sun. Y axis is parallel to solar equatorial plane. Z axis is positive northward. See Russell, 1971
enumeration	GSM	Geocentric Solar Magnetospheric - A coordinate system where the X axis is from Earth to Sun, Z axis is northward in a plane containing the X axis and the geomagnetic dipole axis. See Russell, 1971
enumeration	HAE	Heliocentric Aries Ecliptic - A coordinate system where the Z axis is normal to the ecliptic plane, positive northward. X axis is positive towards the first point of Aries (from Earth to Sun at vernal equinox). Same as SE below. See Hapgood, 1992.
enumeration	HCC	Heliocentric Cartesian - A 3-D orthonormal coordinate system that is primarily intended to specify with two dimensions a point on the solar disk. The Z axis points toward the observer. The Y axis lies in the plane defined by the solar spin vector and the Z axis, positive northward. The X axis is perpendicular to the Y and Z axes, positive toward solar west. Standard representation for this system is via the point's x and y values, expressed either as physical distances or as fractions of the solar disk radius.
enumeration	HCI	Heliographic Carrington Inertial.
enumeration	HCR	Heliocentric Radial - A 3-D orthonormal coordinate

		system that is primarily intended to specify with two dimensions a point on the solar disk. The Z axis points toward the observer. The Y axis lies in the plane defined by the solar spin vector and the Z axis, positive northward. The X axis is perpendicular to the Y and Z axes, positive toward solar west. Standard representation for this system is via the point's distance rho from the Z axis [ $\text{Rho} = \sqrt{x^2 + y^2}$ ] and its phase angle psi measured counterclockwise from the +Y axis [ $\text{psi} = \arctan(-y/x)$ ]
enumeration	HEE	Heliocentric Earth Ecliptic - A coordinate system where the Z axis is normal to the ecliptic plane, positive northward. X axis points from Sun to Earth. See Hapgood, 1992
enumeration	HEEQ	Heliocentric Earth Equatorial - A coordinate system where the Z axis is normal to the solar equatorial plane, positive northward. X axis is generally Earthward in the plane defined by the Z axis and the Sun-Earth direction. See Hapgood, 1992.
enumeration	HG	Heliographic - A heliocentric rotating coordinate system where the Z axis is normal to the solar equatorial plane, positive northward. X, Y axes rotate with a 25.38 day period. The zero longitude (X axis) is defined as the longitude that passed through the ascending node of the solar equator on the ecliptic plane on 1 January, 1854 at 12 UT. See <a href="http://nssdc.gsfc.nasa.gov/space/helios/coor_des.html">http://nssdc.gsfc.nasa.gov/space/helios/coor_des.html</a>
enumeration	HGI	Heliographic Inertial - A heliocentric coordinate system where the Z axis is normal to the solar equatorial plane, positive northward. X axis is along the intersection line between solar equatorial and ecliptic planes. The X axis was positive at SE longitude of 74.367 deg on Jan 1, 1900. (See SE below.) See <a href="http://nssdc.gsfc.nasa.gov/space/helios/coor_des.html">http://nssdc.gsfc.nasa.gov/space/helios/coor_des.html</a>
enumeration	HPC	Heliopprojective Cartesian = A 3-D orthonormal (left-handed) coordinate system that is primarily intended to specify with two dimensions a point on the solar disk. The Z axis points from the observer to the center of the solar disk. The Y axis lies in the plane defined by the solar spin vector and the Z axis, positive northward. The X axis is perpendicular to the Y and Z axes, positive toward solar west. Given as the distance between the observer and the center of the solar disk, the standard representation of an (x,y) point on the solar disk is via the point's longitude angle [ $\arctan(x/d)$ ] and latitude angle [ $\arctan(y/d)$ ].
enumeration	HPR	Heliopprojective Radial - A 3-D orthonormal (left-handed) coordinate system that is primarily intended to specify with two dimensions a point on the solar disk. The Z axis points from the observer to the center of the solar disk. The Y axis lies in the plane defined by the solar spin vector and the Z axis, positive northward. The X axis is perpendicular to the Y and Z axes, positive toward solar west. Given as the distance between the observer and the center of the solar disk, the standard representation for this system of an (x,y) point on the solar disk is via the point's latitude angle theta [= $\arctan(\sqrt{x^2 + y^2}/d)$ ] or equivalent declination parameter delta (= theta - 90 deg), and its phase angle psi as measured counter-clockwise from the +Y axis [psi = $\arctan(-y/x)$ ].
enumeration	HSM	TBD
enumeration	J2000	An astronomical coordinate system which uses the mean equator and equinox of Julian date 2451545.0 TT (Terrestrial Time), or January 1, 2000, noon TT. (aka J2000) to define a celestial reference frame.

enumeration	JSM	Jovian Solar Magnetospheric - A coordinate system where the X axis is from Jupiter to Sun, Z axis is northward in a plane containing the X axis and the Jovian dipole axis.
enumeration	JSO	Coordinate System Related to Jupiter Jovian Solar Orbital (X anti-sunward, Y along the orbital velocity direction)
enumeration	KSM	Kronian Solar Magnetospheric - A coordinate system where the X axis is from Saturn to Sun, Z axis is northward in a plane containing the X axis and the Kronian dipole axis.
enumeration	KSO	Coordinate System Related to Saturn Kronian Solar Orbital (X anti-sunward, Y along the orbital velocity direction)
enumeration	LGM	Local Geomagnetic - A coordinate system used mainly for Earth surface or near Earth surface magnetic field data. X axis northward from observation point in a geographic meridian. Z axis downward towards Earth's center. In this system, H (total horizontal component) = $\sqrt{B_x^2 + B_y^2}$ and D (declination angle) = $\arctan(B_y/B_x)$
enumeration	MAG	Geomagnetic - geocentric. Z axis is parallel to the geomagnetic dipole axis, positive north. X is in the plane defined by the Z axis and the Earth's rotation axis. If N is a unit vector from the Earth's center to the north geographic pole, the signs of the X and Y axes are given by Y = N x Z, X = Y x Z.. See Russell, 1971, and <a href="http://cdpp.cnes.fr/00428.pdf">http://cdpp.cnes.fr/00428.pdf</a>
enumeration	MFA	Magnetic Field Aligned - A coordinate system spacecraft-centered system with Z in the direction of the ambient magnetic field vector. X is in the plane defined by Z and the spacecraft-Sun line, positive sunward. See <a href="http://cdpp.cnes.fr/00428.pdf">http://cdpp.cnes.fr/00428.pdf</a>
enumeration	MSO	Mars or Mercury Solar Orbital coordinate system. The X axis points from the center of the planet to the Sun; the Z axis is perpendicular to the orbital plane of the planet and parallel to the angular momentum vector. The Y axis completes the right-handed coordinate system.
enumeration	RTN	Radial Tangential Normal. Typically centered at a spacecraft. Used for IMF and plasma V vectors. R (radial) axis is radially away from the Sun, T (tangential) axis is normal to the plane formed by R and the Sun's spin vector, positive in the direction of planetary motion. N (normal) is R x T.
enumeration	SC	Spacecraft - A coordinate system defined by the spacecraft geometry and/or spin. Often has Z axis parallel to spacecraft spin vector. X and Y axes may or may not corotate with the spacecraft. See SR and SR2 below.
enumeration	SE	Solar Ecliptic - A heliocentric coordinate system where the Z axis is normal to the ecliptic plane, positive northward. X axis is positive towards the first point of Aries (from Earth to Sun at vernal equinox). Same as HAE above. See <a href="http://nssdc.gsfc.nasa.gov/space/helios/coor_des.html">http://nssdc.gsfc.nasa.gov/space/helios/coor_des.html</a>
enumeration	SM	Solar Magnetic - A geocentric coordinate system where the Z axis is northward along Earth's dipole axis, X axis is in plane of z axis and Earth-Sun line, positive sunward. See Russell, 1971.
enumeration	SR	Spin Reference - A special case of a Spacecraft (SC) coordinate system for a spinning spacecraft. Z is parallel to the spacecraft spin vector. X and Y rotate with the spacecraft. See <a href="http://cdpp.cnes.fr/00428.pdf">http://cdpp.cnes.fr/00428.pdf</a>

enumeration	SR2	Spin Reference 2 - A special case of a Spacecraft (SC) coordinate system for a spinning spacecraft. Z is parallel to the spacecraft spin vector. X is in the plane defined by Z and the spacecraft-Sun line, positive sunward. See < <a href="http://cdpp.cnes.fr/00428.pdf">http://cdpp.cnes.fr/00428.pdf</a> >
enumeration	SSE	Spacecraft Solar Ecliptic - A coordinate system used for deep space spacecraft, for example Helios. - X axis from spacecraft to Sun. Z axis normal to ecliptic plane, positive northward. Note: Angle between normals to ecliptic and to Helios orbit plane ~ 0.25 deg.
enumeration	SSE_L	Selenocentric Solar Ecliptic. The X axis points from the center of the Earth's moon to the sun, the Z axis is normal to the ecliptic plane, positive northward. And the Y axis completes the right-handed set of axes.
enumeration	SpacecraftOrbitPlane	A coordinate system where X lies in the plane normal to and in the direction of motion of the spacecraft, Z is normal to this plane and Y completes the triad in a right-handed coordinate system.
enumeration	TIIS	In this Cartesian coordinate system, X is along the flow direction, Y is along the Titan-Saturn vector, and z is along the spin axis. These coordinates are analogous to the earth-centered GSE coordinates that relate to the direction of flow of the solar wind onto Earth's environment.
enumeration	VSO	Venus Solar Orbital coordinate system. The X axis points from the center of the planet to the Sun; The Z axis is perpendicular to the orbital plane of the planet and parallel to the angular momentum vector. The Y axis completes the right-handed coordinate system.
enumeration	WGS84	The World Geodetic System (WGS) defines a reference frame for the earth, for use in geodesy and navigation. The WGS84 uses the zero meridian as defined by the Bureau International de l'Heure.
Used by	Element	CoordinateSystemName
Source	<pre> &lt;xsd:simpleType name="enumCoordinateSystemName"&gt;   &lt;xsd:annotation&gt;     &lt;xsd:documentation xml:lang="en"&gt;Identifiers of the origin and orientation of a set of typically orthogonal axes.&lt;/xsd:documentation&gt;   &lt;/xsd:annotation&gt;   &lt;xsd:restriction base="xsd:string"&gt;     &lt;xsd:enumeration value="CGM"&gt;       &lt;xsd:annotation&gt;         &lt;xsd:documentation xml:lang="en"&gt;Corrected Geomagnetic - A coordinate system from a spatial point with GEO radial distance and geomagnetic latitude and longitude, follow the epoch-appropriate IGRF/DGRF model field vector through to the point where the field line crosses the geomagnetic dipole equatorial plane. Then trace the dipole magnetic field vector Earthward from that point on the equatorial plane, in the same hemisphere as the original point, until the initial radial distance is reached. Designate the dipole latitude and longitude at that point as the CGM latitude and longitude of the original point. See &lt;<a href="http://nssdc.gsfc.nasa.gov/space/cgm/cgmm_des.html">&gt;&lt;/a&gt;&lt;/xsd:documentation&gt;       &lt;/xsd:annotation&gt;     &lt;/xsd:enumeration&gt;     &lt;xsd:enumeration value="Carrington"&gt;       &lt;xsd:annotation&gt;         &lt;xsd:documentation xml:lang="en"&gt;A coordinate system which is centered at the Sun and is "fixed" with respect to the synodic rotation rate; the mean synodic value is about 27.2753 days. The Astronomical Almanac gives a value for Carrington longitude of 349.03 degrees at 0000 UT on 1 January 1995.&lt;/xsd:documentation&gt;       &lt;/xsd:annotation&gt;     &lt;/xsd:enumeration&gt;     &lt;xsd:enumeration value="CSO"&gt;       &lt;xsd:annotation&gt; </a></pre>

Each value can be referenced by a unique index.	enumeration	Average	The statistical mean; the sum of a set of values divided by the number of values in the set.	enumeration	Characteristic	A quantity which can be easily identified and measured in a given environment.	enumeration	Circular	Relative to polarization, right-hand circularly polarized light is defined such that the electric field is rotating clockwise as seen by an observer towards whom the wave is moving. Left-hand circularly polarized light is defined such that the electric field is rotating counterclockwise as seen by an observer towards whom the wave is moving. The polarization of magnetohydrodynamic waves is specified with respect to the ambient mean magnetic field : right-hand polarized waves have a transverse electric field component which turns in a right-handed sense (that of the gyrating electrons) around the magnetic field.	enumeration	Column	A two-dimensional measure of a quantity. The column is the area over which the quantity is measured.	enumeration	Component	Projection of a vector along one of the base axes of a coordinate system.	enumeration	Component.I	Projection of a vector along the first named axis of a coordinate system. Typically the X axis, but could be the R axis for an RTN coordinate system.	enumeration	Component.J	Projection of a vector along the second named axis of a coordinate system. Typically the Y axis, but could be the T axis for an RTN coordinate system.	enumeration	Component.K	Projection of a vector along the third named axis of a coordinate system. Typically the Z axis, but could be the N axis for an RTN coordinate system.	enumeration	Core	The central or main part of an object or calculated distribution. For example, the part of a distribution of particles at low energies that is a thermal
enumeration	Anisotropy	Direction-dependent property.																																	
enumeration	Array	A sequence of values corresponding to the elements in a rectilinear, n-dimension matrix. Each value can be referenced by a unique index.																																	
enumeration	Average	The statistical mean; the sum of a set of values divided by the number of values in the set.																																	
enumeration	Characteristic	A quantity which can be easily identified and measured in a given environment.																																	
enumeration	Circular	Relative to polarization, right-hand circularly polarized light is defined such that the electric field is rotating clockwise as seen by an observer towards whom the wave is moving. Left-hand circularly polarized light is defined such that the electric field is rotating counterclockwise as seen by an observer towards whom the wave is moving. The polarization of magnetohydrodynamic waves is specified with respect to the ambient mean magnetic field : right-hand polarized waves have a transverse electric field component which turns in a right-handed sense (that of the gyrating electrons) around the magnetic field.																																	
enumeration	Column	A two-dimensional measure of a quantity. The column is the area over which the quantity is measured.																																	
enumeration	Component	Projection of a vector along one of the base axes of a coordinate system.																																	
enumeration	Component.I	Projection of a vector along the first named axis of a coordinate system. Typically the X axis, but could be the R axis for an RTN coordinate system.																																	
enumeration	Component.J	Projection of a vector along the second named axis of a coordinate system. Typically the Y axis, but could be the T axis for an RTN coordinate system.																																	
enumeration	Component.K	Projection of a vector along the third named axis of a coordinate system. Typically the Z axis, but could be the N axis for an RTN coordinate system.																																	
enumeration	Core	The central or main part of an object or calculated distribution. For example, the part of a distribution of particles at low energies that is a thermal																																	

		(Maxwellian) population.
enumeration	CrossSpectrum	The Fourier transform of the cross correlation of two physical or empirical observations.
enumeration	Deviation	The difference between an observed value and the expected value of a quantity.
enumeration	Differential	A measurement within a narrow range of energy and/or solid angle.
enumeration	Direction	The spatial relation between an object and another object, the orientation of the object or the course along which the object points or moves.
enumeration	DirectionAngle	The angle between a position vector or measured vector (or one of its projections onto a plane) and one of the base axes of the coordinate system.
enumeration	DirectionAngle.AzimuthAngle	The angle between the projection into the i-j plane of a position or measured vector and the i-axis of the coordinate system. Mathematically defined as $\arctan(j/i)$ .
enumeration	DirectionAngle.ElevationAngle	The angle between the position or measured vector and the i-j plane of the coordinate system. Mathematically defined as $\arctan(k/\sqrt{i^2+j^2})$ .
enumeration	DirectionAngle.PolarAngle	The angle between the position or measured vector and the k-axis of the coordinate system. Mathematically defined as $\arctan([SQRT(i^2+j^2)]/k)$ .
enumeration	Directional	A measurement within a narrow range of solid angle.
enumeration	FieldAligned	The component of a quantity which is oriented in the same direction of a field.
enumeration	Fit	Values that make a model agree with the data.
enumeration	Group	An assemblage of values that a certain relation or common characteristic.
enumeration	Halo	The part of an object or distribution surrounding some central body or distribution. For example, the particles above the core energies that show enhancements above the thermal population. Typically, a "power law tail" shows a break from the core Maxwellian at a particular energy.
enumeration	Integral	A flux measurement in a broad range of energy and solid angle.
enumeration	Integral.Area	Integration over the extent of a planar region, or of the surface of a solid.
enumeration	Integral.Bandwidth	Integration over the width of a frequency band.
enumeration	Integral.SolidAngle	Integration over the angle in three-dimensional space that an object subtends at a point.
enumeration	LineOfSight	The line of sight is the line that connects the observer with the observed object. This expression is often used with measurements of Doppler velocity and magnetic field in magnetograms, where only the component of the vector field directed along the line of sight is measured.
enumeration	Linear	Polarization where the E-field vector is confined to a given plane
enumeration	Magnitude	A measure of the strength of a vector quantity or length of its representational vector.
enumeration	Maximum	The largest value of a batch or sample or the upper bound of a probability distribution.
enumeration	Median	The measure of central tendency of a set of n. values computed by ordering the values and taking the value at position (n. + 1) / 2 when n. is odd or the arithmetic mean of the values at positions n. / 2 and (n. / 2) + 1 when n. is even.
enumeration	Minimum	The smallest value of a batch or sample or the lower bound of a probability distribution.

enumeration	Moment	Parameters determined by integration over a distribution function convolved with a power of velocity.
enumeration	Parallel	Having the same direction as a given direction
enumeration	Peak	The maximum value for the quantity in question, over a period of time which is usually equal to the cadence.
enumeration	Perpendicular	At right angles to a given direction.
enumeration	Perturbation	Variations in the state of a system.
enumeration	Phase	A point or portion in a recurring series of changes.
enumeration	PhaseAngle	Phase difference between two or more waves, normally expressed in degrees.
enumeration	Projection	A measure of the length of a position or measured vector as projected into a plane of the coordinate system.
enumeration	Projection.IJ	A measure of the length of a position or measured vector projected into the i-j (typically X-Y) plane of the coordinate system.
enumeration	Projection.IK	A measure of the length of a position or measured vector projected into the i-k (typically X-Z) plane of the coordinate system.
enumeration	Projection.JK	A measure of the length of a position or measured vector projected into the j-k (typically Y-Z) plane of the coordinate system.
enumeration	Pseudo	Similar to or having the appearance of something else. Can be used to indicate an estimation or approximation of a particular quantity.
enumeration	Ratio	The relative magnitudes of two quantities.
enumeration	Scalar	A quantity that is completely specified by its magnitude and has no direction.
enumeration	Spectral	Characterized as a range or continuum of frequencies
enumeration	StandardDeviation	The square root of the average of the squares of deviations about the mean of a set of data. Standard deviation is a statistical measure of spread or variability.
enumeration	StokesParameters	A set of four parameters (usually called I,Q, U and V) which describe the polarization state of an electromagnetic wave propagating through space.
enumeration	Strahl	A distribution of particles concentrated in a narrow energy band. The band may be aligned with a secondary feature. For example, it may occur in a narrow cone aligned with the mean magnetic field direction.
enumeration	Superhalo	The part of an object or distribution surrounding some central body or distribution evident in a second break in the distribution function (e.g., a different power law). It consists of a population at a higher energies than for a halo.
enumeration	Symmetric	Equal distribution about one or more axes.
enumeration	Tensor	A generalized linear "quantity" or "geometrical entity" that can be expressed as a multi-dimensional array relative to a choice of basis of the particular space on which it is defined.
enumeration	Total	The summation of quantities over all possible species.
enumeration	Trace	The sum of the elements on the main diagonal (the diagonal from the upper left to the lower right) of a square matrix.
enumeration	Uncertainty	A statistically defined discrepancy between a measured quantity and the true value of that quantity that cannot be corrected by calculation or calibration.
enumeration	Variance	A measure of dispersion of a set of data points

		around their mean value. The expectation value of the squared deviations from the mean.
	enumeration Vector	A set of parameter values each along some independent variable (e.g., components of a field in three orthogonal spatial directions; atmospheric temperature values at several altitudes, or at a given latitude and longitude;).

## Simple Type enumWaveType

Namespace	http://impex-fp7.oeaw.ac.at		
Annotations	Identifiers for the carrier or phenomenum of wave information observed by the measurement.		
Diagram	<p>The diagram shows a UML class named "enumWaveType" with a directed association line pointing to another class named "xsd:string". A callout box points to the "xsd:string" class with the text: "Built-in primitive type. The string datatype represents character strings in XML."</p>		
Type	restriction of xsd:string		
Facets	enumeration	Electromagnetic	Electric and magnetic field variations in time and space that propagate through a medium or a vacuum with the wave's propagation, electric field, and magnetic field vectors forming an orthogonal triad. Waves in this category are detected by having their field quantities measured.
	enumeration	Electrostatic	Collective longitudinal electric-field and plasma oscillations trapped within a body of plasma.
	enumeration	Hydrodynamic	Periodic or quasi-periodic oscillations of fluid quantities.
	enumeration	MHD	Hydrodynamic waves in a magnetized plasma in which the background magnetic field plays a key role in controlling the wave propagation characteristics.
	enumeration	Photon	Electromagnetic waves detected by techniques that utilize their corpuscular character (e.g., CCD, CMOS, photomultipliers).
	enumeration	PlasmaWaves	Self-consistent collective oscillations of particles and fields (electric and magnetic) in a plasma.

Emissivity is usually integrated over all directions/solid angles.	enumeration	EnergyFlux	The amount of energy passing through a unit area in a unit time.	enumeration	EquivalentWidth	The spectral width of a total absorption line having the amount of absorbed radiant energy being equivalent to that in an observed absorption line.	enumeration	Frequency	The number of occurrences of a repeating event per unit time.	enumeration	Gyrofrequency	The number of gyrations around a magnetic guiding center (field line) a charged particle makes per unit time due to the Lorentz force.	enumeration	Intensity	The measurement of radiant or wave energy per unit detector area per unit bandwidth per unit solid angle per unit time.	enumeration	LineDepth	The measure of the amount of absorption below the continuum (depth) in a particular wavelength or frequency in an absorption spectrum.	enumeration	MagneticField	A region of space near a magnetized body where magnetic forces can be detected (as measured by methods such as Zeeman splitting, etc.).	enumeration	ModeAmplitude	In helioseismology the magnitude of oscillation of waves of a particular geometry.	enumeration	PlasmaFrequency	A number-density-dependent characteristic frequency of a plasma.
enumeration	ACElectricField	Alternating electric field component of a wave.																																													
enumeration	ACMagneticField	Alternating magnetic field component of a wave.																																													
enumeration	Absorption	Decrease of radiant energy (relative to the background continuum spectrum).																																													
enumeration	Albedo	The ratio of reflected radiation from the surface to incident radiation upon it.																																													
enumeration	DopplerFrequency	Change in the frequency of a propagating wave due to motion of the source, the observer, the reflector, or the propagation medium.																																													
enumeration	Emissivity	The energy emitted spontaneously per unit bandwidth (typically frequency) per unit time per unit mass of source. Emissivity is usually integrated over all directions/solid angles.																																													
enumeration	EnergyFlux	The amount of energy passing through a unit area in a unit time.																																													
enumeration	EquivalentWidth	The spectral width of a total absorption line having the amount of absorbed radiant energy being equivalent to that in an observed absorption line.																																													
enumeration	Frequency	The number of occurrences of a repeating event per unit time.																																													
enumeration	Gyrofrequency	The number of gyrations around a magnetic guiding center (field line) a charged particle makes per unit time due to the Lorentz force.																																													
enumeration	Intensity	The measurement of radiant or wave energy per unit detector area per unit bandwidth per unit solid angle per unit time.																																													
enumeration	LineDepth	The measure of the amount of absorption below the continuum (depth) in a particular wavelength or frequency in an absorption spectrum.																																													
enumeration	MagneticField	A region of space near a magnetized body where magnetic forces can be detected (as measured by methods such as Zeeman splitting, etc.).																																													
enumeration	ModeAmplitude	In helioseismology the magnitude of oscillation of waves of a particular geometry.																																													
enumeration	PlasmaFrequency	A number-density-dependent characteristic frequency of a plasma.																																													

	enumeration	Polarization	Direction of the electric vector of an electromagnetic wave. The wave can be linearly polarized in any direction perpendicular to the direction of travel, circularly polarized (clockwise or counterclockwise), unpolarized, or mixtures of the above.
	enumeration	PoyntingFlux	Electromagnetic energy flux transported by a wave characterized as the rate of energy transport per unit area per steradian.
	enumeration	PropagationTime	Time difference between transmission and reception of a wave in an active wave experiment.
	enumeration	StokesParameters	A set of four parameters (usually called I, Q, U and V) which describe the polarization state of an electromagnetic wave propagating through space.
	enumeration	Velocity	Rate of change of position. Also used for the average velocity of a collection of particles, also referred to as "bulk velocity".
	enumeration	Wavelength	The peak-to-peak distance over one wave period.

## Simple Type enumMixedQuantity

Namespace	http://impex-fp7.oeaw.ac.at	
Annotations	Identifiers for the combined attributes of a mixed parameter quantity.	
Diagram	<p>The diagram shows a UML class named "enumMixedQuantity" with a generalization relationship indicated by an arrow pointing to the right towards the "xsd:string" class. A callout box below the "enumMixedQuantity" class states: "Identifiers for the combined attributes of a mixed parameter quantity." Another callout box below the "xsd:string" class states: "Built-in primitive type. The string datatype represents character strings in XML."</p>	
Type	restriction of xsd:string	
Facets	enumeration	AkasofuEpsilon
		A measure of the magnetopause energy flux and an indicator of the solar wind power available for subsequent magnetospheric energization. Defined as: $V^*B^{^2}l^{^1}2\sin(\theta/2)^{^4}$ where B is the IMF, l is an empirical scaling parameter equal to 7 RE, and $\theta = \tan(BY / BZ)^{-1}$ the IMF clock angle.
	enumeration	AlfvenMachNumber
		The ratio of the bulk flow speed to the Alfvén speed.
	enumeration	AlfvenVelocity
		Phase velocity of the Alfvén wave; In SI units it is the velocity of the magnetic field divided by the square root of the mass density times the permeability of free space ( $\mu_0$ ).
	enumeration	FrequencyToGyrofrequencyRatio
		The ratio of the characteristic frequency of a medium to gyrofrequency of a particle.
	enumeration	MagnetosonicMachNumber

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	Identifiers for the information useful in understanding the context of an observation, typically observed or measured coincidentally

	with a physical observation.		
Diagram			
Type	restriction of xsd:string		
Facets	enumeration	InstrumentMode	An indication of a state (mode) in which the instrument is operating. How a mode influences the interpretation and representation of data is described in instrument related documentation.
	enumeration	Other	Not classified with more specific terms. The context of its usage may be described in related text.
	enumeration	Positional	The specification of the location of an object or measurement within a reference coordinate system. The position is usually expressed as a set of values corresponding to the location along a set of orthogonal axes together with the date/time of the observation.
	enumeration	Temporal	Pertaining to time.
	enumeration	Velocity	Rate of change of position. Also used for the average velocity of a collection of particles, also referred to as "bulk velocity".
Used by	Element	SupportQuantity

## Simple Type enumProcessingLevel

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	Identifiers to characterize the amount and type of manipulation which has been applied to the sampled data.

Diagram	<p>Identifiers to characterize the amount and type of manipulation which has been applied to the sampled data.</p> <p>Built-in primitive type. The string datatype represents character strings in XML.</p>	
Type	restriction of xsd:string	
Facets	enumeration	Calibrated Data wherein sensor outputs have been convolved with instrument response function, often irreversibly, to yield data in physical units.
	enumeration	Raw Data in its original state with no processing to account for calibration!!!
	enumeration	Uncalibrated Duplicate data are removed from the data stream and data are time ordered. Values are not adjusted for any potential biases or external factors.

### Simple Type enumMeasurementType

Namespace	http://impex-fp7.oeaw.ac.at	
Annotations	Identifiers for the method of making an estimated value of a quantity that forms the basis of an observation.	
Diagram	<p>Identifiers for the method of making an estimated value of a quantity that forms the basis of an observation.</p> <p>Built-in primitive type. The string datatype represents character strings in XML.</p>	
Type	restriction of xsd:string	
Facets	enumeration	Current Direct measurement of the electric currency
	enumeration	ActivityIndex An indication, derived from one or more measurements, of the level of activity of an object or region, such as sunspot number, F10.7 flux, Dst, or the Polar Cap Indices.
	enumeration	Dopplergram A map or image depicting the spatial distribution of line-of-sight velocities of the observed object.
	enumeration	Dust Free microscopic particles of solid material.
	enumeration	ElectricField A region of space around a charged particle, or between two voltages within which a force is exerted on charged objects in its vicinity. An electric field is the electric force per

		unit charge.
enumeration	EnergeticParticles	Pieces of matter that are moving very fast. Energetic particles include protons, electrons, neutrons, neutrinos, the nuclei of atoms, and other sub-atomic particles.
enumeration	Ephemeris	The spatial coordinates of a body as a function of time. When used as an Instrument Type it represents the process or methods used to generate spatial coordinates.
enumeration	ImageIntensity	Measurements of the two-dimensional distribution of the intensity of photons from some region or object such as the Sun or the polar auroral regions; can be in any wavelength band, and polarized, etc.
enumeration	InstrumentStatus	A quantity directly related to the operation or function of an instrument.
enumeration	IonComposition	In situ measurements of the relative flux or density of electrically charged particles in the space environment. May give simple fluxes, but full distribution functions are sometimes measured.
enumeration	Irradiance	Irradiance - A radiometric term for the power of electromagnetic radiation at a surface, per unit area. "Irradiance" is used when the electromagnetic radiation is incident on the surface. Irradiance data may be reported in any units (i.e. counts/s) due to, for example, being at a particular wavelength, or to being a not-fully-calibrated relative measurement.
enumeration	MagneticField	A region of space near a magnetized body where magnetic forces can be detected (as measured by methods such as Zeeman splitting, etc.).
enumeration	Magnetogram	Measurements of the vector or line-of-sight magnetic field determined from remote sensing measurements of the detailed structure of spectral lines, including their splitting and polarization. ("Magnetogram.")
enumeration	NeutralAtomImages	Measurements of neutral atom fluxes as a function of look direction; often related to remote energetic charged particles that lose their charge through charge-exchange and then reach the detector on a line-of-sight trajectory.
enumeration	NeutralGas	Measurements of neutral atomic and molecular components of a gas.
enumeration	Profile	Measurements of a quantity as a function of height above an object such as the limb of a body.
enumeration	Radiance	A radiometric measurement that describes the amount of electromagnetic radiation that passes through or is emitted from a particular area, and falls within a given solid angle in a specified direction. They are used to characterize both emission from diffuse sources and reflection from diffuse surfaces.
enumeration	Spectrum	The distribution of a characteristic of a physical system or phenomenon, such as the energy emitted by a radiant source, arranged in the order of wavelengths.
enumeration	ThermalPlasma	Measurements of the plasma in the energy regime where the most of the plasma occurs. May be the basic fluxes in the form of distribution functions or the derived bulk parameters (density, flow velocity, etc.).
enumeration	Waves	Data resulting from observations of wave experiments and natural wave phenomena. Wave experiments are typically active and natural wave phenomena are passive. Examples of wave experiments include coherent/incoherent scatter radars, radio soundings, VLF propagation studies, ionospheric scintillation of beacon satellite signals, etc. Examples of natural wave phenomena include micropulsations, mesospheric gravity

		waves, auroral/plasmaspheric hiss, Langmuir waves, AKR, Jovian decametric radiation, solar radio bursts, etc.
	enumeration Waves.Active	Exerting an influence or producing a change or effect. An active measurement is one which produces a transmission or excitation as a part of the measurement cycle.
	enumeration Waves.Passive	Movement or effect produced by outside influence. A passive measurement is one which does not produce a transmission or excitation as a part of the measurement cycle.
Used by	Element MeasurementType	
Source	<pre> &lt;xsd:simpleType name="enumMeasurementType"&gt;   &lt;xsd:annotation&gt;     &lt;xsd:documentation xml:lang="en"&gt;Identifiers for the method of making an estimated value of a quantity that forms the basis of an observation.&lt;/xsd:documentation&gt;   &lt;/xsd:annotation&gt;   &lt;xsd:restriction base="xsd:string"&gt;     &lt;xsd:enumeration value="Current"&gt;       &lt;xsd:annotation&gt;         &lt;xsd:documentation xml:lang="en"&gt;Direct measurement of the electric currency&lt;/xsd:documentation&gt;       &lt;/xsd:annotation&gt;     &lt;/xsd:enumeration&gt;     &lt;xsd:enumeration value="ActivityIndex"&gt;       &lt;xsd:annotation&gt;         &lt;xsd:documentation xml:lang="en"&gt;An indication, derived from one or more measurements, of the level of activity of an object or region, such as sunspot number, F10.7 flux, Dst, or the Polar Cap Indices.&lt;/xsd:documentation&gt;       &lt;/xsd:annotation&gt;     &lt;/xsd:enumeration&gt;     &lt;xsd:enumeration value="Dopplergram"&gt;       &lt;xsd:annotation&gt;         &lt;xsd:documentation xml:lang="en"&gt;A map or image depicting the spatial distribution of line-of-sight velocities of the observed object.&lt;/xsd:documentation&gt;       &lt;/xsd:annotation&gt;     &lt;/xsd:enumeration&gt;     &lt;xsd:enumeration value="Dust"&gt;       &lt;xsd:annotation&gt;         &lt;xsd:documentation xml:lang="en"&gt;Free microscopic particles of solid material.&lt;/xsd:documentation&gt;       &lt;/xsd:annotation&gt;     &lt;/xsd:enumeration&gt;     &lt;xsd:enumeration value="ElectricField"&gt;       &lt;xsd:annotation&gt;         &lt;xsd:documentation xml:lang="en"&gt;A region of space around a charged particle, or between two voltages within which a force is exerted on charged objects in its vicinity. enumeration	Asteroid	A small extraterrestrial body consisting mostly of rock and metal that is in orbit around the sun.																																							
enumeration	Callisto	A moon of the planet Jupiter, the second largest after Ganymede and the third-largest in the solar system																																							
enumeration	Comet	A relatively small extraterrestrial body consisting of a frozen mass that travels around the sun in a highly elliptical orbit.																																							
enumeration	Earth	The third planet from the sun in our solar system.																																							
enumeration	Earth.Magnetosheath	The region between the bow shock and the magnetopause, characterized by very turbulent plasma.																																							
enumeration	Earth.Magnetosphere	The region of space above the atmosphere or surface of the planet, and bounded by the magnetopause, that is under the direct influence of the planet's magnetic field.																																							
enumeration	Earth.Magnetosphere.Magnetotail	The region on the night side of the body where the magnetic field is stretched backwards by the force of the solar wind. For Earth, the magnetotail begins at a night-side radial distance of 10 Re ( $X > -10Re$ ).																																							
enumeration	Earth.Magnetosphere.Main	The region of the magnetosphere where the magnetic field lines are closed, but does not include the gaseous region gravitationally bound to the body.																																							
enumeration	Earth.Magnetosphere.Polar	The region near the pole of a body. For a magnetosphere the polar region is the area where magnetic field lines are open and includes the auroral zone.																																							
enumeration	Earth.Magnetosphere.RadiationBelt	The region within a magnetosphere where high-energy particles could potentially be trapped in a magnetic field.																																							
enumeration	Earth.NearSurface	The gaseous and possibly ionized environment of a body extending from the surface to some specified altitude. For the Earth, this altitude is 2000 km.																																							
enumeration	Earth.NearSurface.Atmosphere	The neutral gases surrounding a body that extends from the surface and is bound to the body by virtue of the gravitational attraction.																																							
enumeration	Earth.NearSurface.AuroralRegion	The region in the atmospheric where electrically-charged particles bombarding the upper atmosphere of a planet in the presence of a magnetic																																							

		field produce an optical phenomenon.
enumeration	Earth.NearSurface.EquatorialRegion	The Region centered on the equator and limited in latitude by approximately 23 degrees north and south of the equator.
enumeration	Earth.NearSurface.Ionosphere	The charged or ionized gases surrounding a body that are nominally bound to the body by virtue of the gravitational attraction.
enumeration	Earth.NearSurface.IonosphereRegion	The Region of the ionosphere that exists approximately 50 to 95 km above the surface of the Earth. One of several layers in the ionosphere.
enumeration	Earth.NearSurface.IonosphereLayer	A Region of ionised gas occurring at 90-150km above the ground. One of several layers in the ionosphere. Also called the The Kennelly-Heaviside layer.
enumeration	Earth.NearSurface.IonosphereLRegion	A Region contains ionized gases at a height of around 150-800 km above sea level, placing it in the thermosphere. the F region has the highest concentration of free electrons and ions anywhere in the atmosphere. It may be thought of as comprising two layers, the F1-and F2-layers. One of several layers in the ionosphere. Also known as the Appleton layer.
enumeration	Earth.NearSurface.IonosphereTopside	The Topside at the upper most areas of the ionosphere.
enumeration	Earth.NearSurface.Mesosphere	The layer of the atmosphere that extends from the Stratosphere to a range of 80 km to 85 km, temperature decreasing with height.
enumeration	Earth.NearSurface.Plasmasphere	A region of the magnetosphere consisting of low energy (cool) plasma. It is located above the ionosphere. The outer boundary of the plasmasphere is known as the plasmapause, which is defined by an order of magnitude drop in plasma density.
enumeration	Earth.NearSurface.PolarCap	The areas of the globe surrounding the poles and consisting of the region north of 60 degrees north latitude an the region south of 60 degrees south latitude.
enumeration	Earth.NearSurface.SouthAtlanticAnomalyRegion	The region in the inner van Allen radiation belt makes its closest approach to the planet's surface. The result is that, for a given altitude, the radiation intensity is higher over this region than elsewhere.
enumeration	Earth.NearSurface.Stratosphere	The layer of the atmosphere that extends from the troposphere to about 30 km, temperature increases with height. The stratosphere contains the ozone layer.
enumeration	Earth.NearSurface.Thermosphere	The layer of the atmosphere that extends from the Mesosphere to 640+ km, temperature increasing with height.
enumeration	Earth.NearSurface.Troposphere	The lowest layer of the atmosphere which begins at the surface and extends to between 7 km (4.4 mi) at the poles and 17 km (10.6 mi) at the equator, with some variation due to weather factors.
enumeration	Earth.Surface	The outermost area of a solid object.
enumeration	Enceladus	One of the innermost moons of Saturn.
enumeration	Europa	The sixth-closest moon of the planet Jupiter
enumeration	Ganymede	The biggest moon of Jupiter planet in our solar system.
enumeration	Heliosphere	The solar atmosphere extending roughly from the outer corona to the edge of the solar plasma at the heliopause separating primarily solar plasma from interstellar plasma.
enumeration	Heliosphere.Heliosheath	The region extending radially outward from the heliospheric termination shock and in which the decelerated solar wind plasma is still significant.
enumeration	Heliosphere.Inner	The region of the heliosphere extending radially

		outward from the solar coronal base to just inside 1 AU.
enumeration	Heliosphere.NearEarth	The heliospheric region near the Earth which extends to and includes the area near the L1 and L2 Lagrange point.
enumeration	Heliosphere.Outer	The region of the heliosphere extending radially outward from just outside 1 AU to the heliospheric termination shock.
enumeration	Heliosphere.Remote1AU	A roughly toroidal region that includes the Earth's orbit, but exclusive of the region near the Earth.
enumeration	Interstellar	The region between stars outside of the star's heliopause.
enumeration	Io	The innermost of the four Galilean moons of the planet Jupiter
enumeration	Jupiter	The fifth planet from the sun in our solar system.
enumeration	Jupiter.Magnetosphere	The magnetosphere of the fifth planet from the sun in our solar system.
enumeration	Mars	The forth planet from the sun in our solar system.
enumeration	Mercury	The first planet from the sun in our solar system.
enumeration	Mercury.Magnetosphere	The magnetosphere of the first planet from the sun in our solar system.
enumeration	Neptune	The seventh planet from the sun in our solar system.
enumeration	Planet	There are eighth planets in the solar system.
enumeration	Planet.Magnetosphere	The magnetosphere of one of the planets in the solar system.
enumeration	Pluto	The ninth (sub)planet from the sun in our solar system.
enumeration	Rhea	The second-largest moon of Saturn and the ninth largest moon in the Solar System
enumeration	Saturn	The sixth planet from the sun in our solar system.
enumeration	Saturn.Magnetosphere	The magnetosphere of the sixth planet from the sun in our solar system.
enumeration	Sun	The star upon which our solar system is centered.
enumeration	Sun.Chromosphere	The region of the Sun's (or a star's) atmosphere above the temperature minimum and below the Transition Region. The solar chromosphere is approximately 400 km to 2100 km above the photosphere, and characterized by temperatures from 4500 - 28000 K.
enumeration	Sun.Corona	The outermost atmospheric region of the Sun or a star, characterized by ionization temperatures above $10^5$ K. The solar corona starts at about 2100 km above the photosphere; there is no generally defined upper limit.
enumeration	Sun.Interior	The region inside the body which is not visible from outside the body.
enumeration	Sun.Photosphere	The atmospheric layer of the Sun or a star from which continuum radiation, especially optical, is emitted to space. For the Sun, the photosphere is about 500 km thick.
enumeration	Sun.TransitionRegion	A very narrow (<100 km) layer between the chromosphere and the corona where the temperature rises abruptly from about 8000 to about 500,000 K.
enumeration	Titan	The largest moon of Saturn
enumeration	Uranus	The eighth planet from the sun in our solar system.
enumeration	Venus	The second planet from the sun in our solar system.

## Simple Type enumDocumentType

Namespace	http://impex-fp7.oeaw.ac.at															
Annotations	Identifiers for the characterization of the content or purpose of a document.															
Diagram	<p>The diagram shows a UML class named "enumDocumentType" with a hollow diamond symbol indicating generalization. A line connects it to another class named "xsd:string". Below the classes, two callouts provide additional information: one for "enumDocumentType" stating "Identifiers for the characterization of the content or purpose of a document.", and another for "xsd:string" stating "Built-in primitive type. The string datatype represents character strings in XML."</p>															
Type	restriction of xsd:string															
Facets	<table border="1"> <tr> <td>enumeration</td> <td>Other</td> </tr> <tr> <td>enumeration</td> <td>Poster</td> <td>A set of information arranged on a single page or sheet, typically in a large format.</td> </tr> <tr> <td>enumeration</td> <td>Presentation</td> <td>A set of information that is used when communicating to an audience.</td> </tr> <tr> <td>enumeration</td> <td>Report</td> <td>A document which describes the findings of some individual or group.</td> </tr> <tr> <td>enumeration</td> <td>Specification</td> <td>A detailed description of the requirements and other aspects of an object or component</td> </tr> </table>		enumeration	Other	enumeration	Poster	A set of information arranged on a single page or sheet, typically in a large format.	enumeration	Presentation	A set of information that is used when communicating to an audience.	enumeration	Report	A document which describes the findings of some individual or group.	enumeration	Specification	A detailed description of the requirements and other aspects of an object or component
enumeration	Other															
enumeration	Poster	A set of information arranged on a single page or sheet, typically in a large format.														
enumeration	Presentation	A set of information that is used when communicating to an audience.														
enumeration	Report	A document which describes the findings of some individual or group.														
enumeration	Specification	A detailed description of the requirements and other aspects of an object or component														

		that may be used to develop an implementation.
	enumeration	TechnicalNote A document summarizing the performance and other technical characteristics of a product, machine, component, subsystem or software in sufficient detail to be used by an engineer or researcher.
	enumeration	WhitePaper An authoritative report giving information or proposals on an issue.

## Simple Type enumSourceType

Namespace	http://impex-fp7.oeaw.ac.at	
Annotations	Identifiers for the characterization of the function or purpose of a source.	
Diagram	<p>Identifiers for the characterization of the function or purpose of a source.</p> <p>Built-in primitive type. The string datatype represents character strings in XML.</p>	
Type	restriction of xsd:string	
Facets	enumeration	Ancillary A complementary item which can be subordinate, subsidiary, auxiliary, supplementary to the primary item.

	enumeration	Browse	A representation of an image which is suitable to reveal most or all of the details of the image.
	enumeration	Data	A collection of organized information, usually the results of experience, observation or experiment, or a set of premises. This may consist of numbers, words, or images, particularly as measurements or observations of a set of variables.
	enumeration	Layout	The structured arrangement of items in a collection.
	enumeration	Thumbnail	A small representation of an image which is suitable to infer what the full-sized imaged is like.
Used by	Element	SourceType	
Source	<pre>&lt;xsd:simpleType name="enumSourceType"&gt;   &lt;xsd:annotation&gt;     &lt;xsd:documentation xml:lang="en"&gt;Identifiers for the characterization of the function or purpose of a source.&lt;/xsd:documentation&gt;   &lt;/xsd:annotation&gt;   &lt;xsd:restriction base="xsd:string"&gt;     &lt;xsd:enumeration value="Ancillary"&gt;       &lt;xsd:annotation&gt;         &lt;xsd:documentation xml:lang="en"&gt;A complementary item which can be subordinate, subsidiary, auxiliary, supplementary to the primary item.&lt;/xsd:documentation&gt;       &lt;/xsd:annotation&gt;     &lt;/xsd:enumeration&gt;     &lt;xsd:enumeration value="Browse"&gt;       &lt;xsd:annotation&gt;         &lt;xsd:documentation xml:lang="en"&gt;A representation of an image which is suitable to reveal most or all of the details of the image.&lt;/xsd:documentation&gt;       &lt;/xsd:annotation&gt;     &lt;/xsd:enumeration&gt;     &lt;xsd:enumeration value="Data"&gt;       &lt;xsd:annotation&gt;         &lt;xsd:documentation xml:lang="en"&gt;A collection of organized information, usually the results of experience, observation or experiment, or a set of premises. This may consist of numbers, words, or images, particularly as measurements or observations of a set of variables.&lt;/xsd:documentation&gt;       &lt;/xsd:annotation&gt;     &lt;/xsd:enumeration&gt;     &lt;xsd:enumeration value="Layout"&gt;       &lt;xsd:annotation&gt;         &lt;xsd:documentation xml:lang="en"&gt;The structured arrangement of items in a collection.&lt;/xsd:documentation&gt;       &lt;/xsd:annotation&gt;     &lt;/xsd:enumeration&gt;     &lt;xsd:enumeration value="Thumbnail"&gt;       &lt;xsd:annotation&gt;         &lt;xsd:documentation xml:lang="en"&gt;A small representation of an image which is suitable to infer what the full-sized imaged is like.&lt;/xsd:documentation&gt;       &lt;/xsd:annotation&gt;     &lt;/xsd:enumeration&gt;   &lt;/xsd:restriction&gt; &lt;/xsd:simpleType&gt;</pre>		

## Simple Type enumHashFunction

Namespace	http://impex-fp7.oeaw.ac.at		
Annotations	Identifiers for functions or algorithms that convert a digital data object into a hash value.		
Diagram	<pre> classDiagram     class enumHashFunction {         &lt;&lt;Identifiers for functions or algorithms that convert a digital data object into a hash value.&gt;&gt;     }     class xsd:string {         &lt;&lt;Built-in primitive type. The string datatype represents character strings in XML.&gt;&gt;     }     enumHashFunction &lt; -- xsd:string   </pre>		
Type	restriction of xsd:string		
Facets	enumeration	MD5	Message Digest 5 (MD5) is a 128-bit message digest algorithm created in 1991 by Professor Ronald Rivest.
	enumeration	SHA1	Secure Hash Algorithm (SHA), a 160-bit message digest algorithm developed by the NSA and described in Federal Information Processing Standard (FIPS) publication 180-1.

	enumeration	SHA256	Secure Hash Algorithm (SHA), a 256-bit message digest algorithm developed by the NSA and described in Federal Information Processing Standard (FIPS) publication 180-1.

### Simple Type enumInstrumentType

Namespace	http://impex-fp7.oeaw.ac.at		
Annotations	Identifiers for the type of experiment the instrument performs. This is the technique of observation.		
Diagram	<pre> classDiagram     class enumInstrumentType {         &lt;&lt;Identifiers for the type of experiment the instrument performs. This is the technique of observation.&gt;&gt;     }     class xsd:string {         &lt;&lt;Built-in primitive type. The string datatype represents character strings in XML.&gt;&gt;     }     enumInstrumentType &lt; -- xsd:string   </pre>		
Type	restriction of xsd:string		
Facets	enumeration	Antenna	A sensor used to measure electric potential.
	enumeration	Channeltron	An instrument that detects electrons, ions, and UV-radiation, according to the principle of a secondary emission multiplier. It is typically used in electron spectroscopy and mass spectrometry.
	enumeration	Coronograph	An instrument which can image things very close to the Sun by using a disk to block the Sun's bright surface which reveals the faint solar corona and other celestial objects.
	enumeration	DoubleSphere	A dipole antenna of which the active (sensor) elements are small spheres located at the ends of two wires deployed in the equatorial plane, on opposite sides of a spinning spacecraft.
	enumeration	DustDetector	An instrument which determines the mass and speed of ambient dust particles.
	enumeration	ElectronDriftInstrument	An active experiment to measure the electron drift velocity based on sensing the displacement of a weak beam of electrons after one gyration in the ambient magnetic field.
	enumeration	ElectrostaticAnalyser	An instrument which uses charged plates to analyze the mass, charge and kinetic energies of charged particles which enter the instrument.
	enumeration	EnergeticParticleInstrument	An instrument that measures fluxes of charged particles as a function of time, direction of motion, mass, charge and/or species.

enumeration	FaradayCup	An instrument consisting of an electrode from which electrical current is measured while a charged particle beam (electrons or ions) impinges on it. Used to determine energy spectrum and sometimes ion composition of the impinging particles.
enumeration	FluxFeedback	A search coil whose bandwidth and signal/noise ratio are increased by the application of negative feedback at the sensor (flux) level by driving a collocated coil with a signal from the preamplifier.
enumeration	FourierTransformSpectrograph	An instrument that determines the spectra of a radiative source, using time-domain measurements and a Fourier transform.
enumeration	GeigerMuellerTube	An instrument which measures density of ionizing radiation based on interactions with a gas.
enumeration	Imager	An instrument which samples the radiation from an area at one or more spectral ranges emitted or reflected by an object.
enumeration	ImagingSpectrometer	An instrument which is a multispectral scanner with a very large number of channels (64-256 channels) with very narrow band widths.
enumeration	Interferometer	An instrument to study the properties of two or more waves from the pattern of interference created by their superposition.
enumeration	IonChamber	A device in which the collected electrical charge from ionization in a gas-filled cavity is taken to be the proportion to some parameter (e.g. dose or exposure) of radiation field
enumeration	IonDrift	A device which measures the current produced by the displacement of ambient ions on a grid, thereby allowing the determination of the ion trajectory and velocity.
enumeration	LangmuirProbe	A monopole antenna associated with an instrument. The instrument applies a potential to the antenna which is swept to determine the voltage/current characteristic. This provides information about the plasma surrounding the probe and spacecraft.
enumeration	LongWire	A dipole antenna whose active (sensor) elements are two wires deployed in the equatorial plane on opposite sides of a spinning spacecraft, and whose length is several times greater than the spacecraft diameter.
enumeration	Magnetometer	An instrument which measures the ambient magnetic field.
enumeration	MassSpectrometer	An instrument which distinguishes chemical species in terms of their different isotopic masses.
enumeration	MicrochannelPlate	An instrument used for the detection of elementary particles, ions, ultraviolet rays and soft X-rays constructed from very thin conductive glass capillaries.
enumeration	MultispectralImager	An instrument which captures images at multiple spectral ranges.
enumeration	NeutralAtomImager	An instrument which measures the quantity and properties of neutral particles over a range of angles. Measured properties can include mass and energy.
enumeration	NeutralParticleDetector	An instrument which measures the quantity and properties of neutral particles. Measured properties can include mass and plasma bulk densities.
enumeration	ParticleCorrelator	An instrument which correlates particle flux to help identify wave/particle interactions.
enumeration	ParticleDetector	An instrument which detects particle flux!!!
enumeration	Photometer	An instrument which measures the strength of electromagnetic radiation within a spectral band which can range from ultraviolet to infrared

		and includes the visible spectrum.
enumeration	Photopolarimeter	An instrument which measures the intensity and polarization or radiant energy. A photopolarimeter is a combination of a photometer and a polarimeter.
enumeration	Platform	A collection of components which can be positioned and oriented as a single unit. A platform may contain other platforms. For example, a spacecraft is a platform which may have components that can be articulated and are also considered platforms.
enumeration	ProportionalCounter	An instrument which measures energy of ionization radiation based on interactions with a gas.
enumeration	QuadrисphericalAnalyser	An instrument used for the 3-D detection of plasma, energetic electrons and ions, and for positive-ion composition measurements.
enumeration	Radar	An instrument that uses directional properties of returned power to infer spatial and/or other characteristics of a remote object.
enumeration	Radiometer	An instrument for detecting or measuring radiant energy. Radiometers are commonly limited to infrared radiation.
enumeration	ResonanceSounder	A combination of a radio receiver and a pulsed transmitter used to study the plasma surrounding a spacecraft by identifying resonances or cut-offs (of the wave dispersion relation), whose frequencies are related to the ambient plasma density and magnetic field. When the transmitter is off it is essentially a high frequency-resolution spectral power receiver.
enumeration	RetardingPotentialAnalyser	An instrument which measures ion temperatures and ion concentrations using a planar ion trap.
enumeration	Riometer	An instrument which measure the signal strength in various directions of the galactic radio signals. Variations in these signals are influenced by solar flare activity and geomagnetic storm and substorm processes.
enumeration	ScintillationDetector	An instrument which detects flourescences of a material which is excited by high energy (ionizing) electromagnetic or charged particle radiation.
enumeration	SearchCoil	An instrument which measures the time variation of the magnetic flux threading a loop by measurement of the electric potential difference induced between the ends of the wire.
enumeration	Sounder	An instrument which measures the radiances from an object. A sounder may measure radiances at multiple spectral ranges.
enumeration	SpacecraftPotentialControl	An instrument to control the electric potential of a spacecraft with respect to the ambient plasma by emitting a variable current of positive ions.
enumeration	SpectralPowerReceiver	A radio receiver which determines the power spectral density of the electric or magnetic field, or both, at one or more frequencies.
enumeration	Spectrometer	An instrument that measures the component wavelengths of light (or other electromagnetic radiation) by splitting the light up into its component wavelengths.
enumeration	TimeOfFlight	An instrument which measures the time it takes for a particle to travel between two detectors.
enumeration	Unspecified	A value which is not provided.
enumeration	WaveformReceiver	A radio receiver which outputs the value of one or more components of the electric and/or magnetic field as a function of time.

```

## Simple Type enumAnnotationType

Namespace	http://impex-fp7.oeaw.ac.at		
Annotations	Identifiers for an classification of an annotation.		
Diagram	<p>The diagram shows a UML class named "enumAnnotationType" with a hollow diamond symbol above it, indicating it is a generalization of another class. A line with an arrow points from "enumAnnotationType" to a class named "xsd:string". Below the classes, there are two callouts: one pointing to "enumAnnotationType" with the text "Identifiers for an classification of an annotation.", and another pointing to "xsd:string" with the text "Built-in primitive type. The string datatype represents character strings in XML."</p>		
Type	restriction of xsd:string		
Facets	enumeration	Anomaly	An interval where measurements or observations may be adversely affected.
	enumeration	Event	An action or observation which occurs at a point in time.

	enumeration	Feature	A prominent or distinctive characteristic that occurs at a location or persists over a period of time.
Used by	Element	AnnotationType	
Source			<pre> &lt;xsd:simpleType name="enumAnnotationType"&gt;   &lt;xsd:annotation&gt;     &lt;xsd:documentation xml:lang="en"&gt;Identifiers for an classification of an annotation.&lt;/xsd:documentation&gt;   &lt;/xsd:annotation&gt;   &lt;xsd:restriction base="xsd:string"&gt;     &lt;xsd:enumeration value="Anomaly"&gt;       &lt;xsd:annotation&gt;         &lt;xsd:documentation xml:lang="en"&gt;An interval where measurements or observations may be adversely affected.&lt;/xsd:documentation&gt;       &lt;/xsd:annotation&gt;     &lt;/xsd:enumeration&gt;     &lt;xsd:enumeration value="Event"&gt;       &lt;xsd:annotation&gt;         &lt;xsd:documentation xml:lang="en"&gt;An action or observation which occurs at a point in time.&lt;/xsd:documentation&gt;       &lt;/xsd:annotation&gt;     &lt;/xsd:enumeration&gt;     &lt;xsd:enumeration value="Feature"&gt;       &lt;xsd:annotation&gt;         &lt;xsd:documentation xml:lang="en"&gt;A prominent or distinctive characteristic that occurs at a location or persists over a period of time.&lt;/xsd:documentation&gt;       &lt;/xsd:annotation&gt;     &lt;/xsd:enumeration&gt;   &lt;/xsd:restriction&gt; &lt;/xsd:simpleType&gt;</pre>

## Simple Type enumClassificationMethod

Namespace	http://impexfp7.oeaw.ac.at		
Annotations	Identifiers for the technique used to determine the characteristics of an object.		
Diagram	<p>Identifiers for the technique used to determine the characteristics of an object.</p>		
Type	restriction of xsd:string		
Facets	enumeration	Automatic	Determined by the analysis or assessment performed by a program or server.
	enumeration	Inferred	Determined by the analysis of other information or resources.
	enumeration	Inspection	Determined by the analysis or assessment performed by a person.
Used by	Element	ClassificationMethod	
Source			<pre> &lt;xsd:simpleType name="enumClassificationMethod"&gt;   &lt;xsd:annotation&gt;     &lt;xsd:documentation xml:lang="en"&gt;Identifiers for the technique used to determine the characteristics of an object.&lt;/xsd:documentation&gt;   &lt;/xsd:annotation&gt;   &lt;xsd:restriction base="xsd:string"&gt;     &lt;xsd:enumeration value="Automatic"&gt;       &lt;xsd:annotation&gt;         &lt;xsd:documentation xml:lang="en"&gt;Determined by the analysis or assessment performed by a program or server.&lt;/xsd:documentation&gt;       &lt;/xsd:annotation&gt;     &lt;/xsd:enumeration&gt;     &lt;xsd:enumeration value="Inferred"&gt;       &lt;xsd:annotation&gt;         &lt;xsd:documentation xml:lang="en"&gt;Determined by the analysis of other information or resources.&lt;/xsd:documentation&gt;       &lt;/xsd:annotation&gt;     &lt;/xsd:enumeration&gt;     &lt;xsd:enumeration value="Inspection"&gt;       &lt;xsd:annotation&gt;         &lt;xsd:documentation xml:lang="en"&gt;Determined by the analysis or assessment performed by a person.&lt;/xsd:documentation&gt;       &lt;/xsd:annotation&gt;     &lt;/xsd:enumeration&gt;   &lt;/xsd:restriction&gt; &lt;/xsd:simpleType&gt;</pre>

enumeration	ArrivalDirection	An angular measure of the direction from which an energetic particle or photon was incident on a detector. The angles may be measured in any coordinate system.																																																															
enumeration	AtomicNumberDetected	The number of protons in the nucleus of an atom as determined by a detector.																																																															
enumeration	AverageChargeState	A measure of the composite deficit (positive) or excess (negative) of electrons with respect to protons.																																																															
enumeration	ChargeState	Charge of a fully or partially stripped ion, in units of the charge of a proton. Charge state of a bare proton = 1.																																																															
enumeration	CountRate	The number of events per unit time.																																																															
enumeration	Counts	The number of detection events occurring in a detector over the detector accumulation time.																																																															
enumeration	Energy	The capacity for doing work as measured by the capability of doing work (potential energy) or the conversion of this capability to motion (kinetic energy)																																																															
enumeration	EnergyDensity	The amount of energy per unit volume.																																																															
enumeration	EnergyFlux	The amount of energy passing through a unit area in a unit time.																																																															
enumeration	FlowSpeed	The rate at which particles or energy is passing through a unit area in a unit time.																																																															
enumeration	FlowVelocity	The volume of matter passing through a unit area perpendicular to the direction of flow in a unit of time.																																																															
enumeration	Fluence	The time integral of a flux. A fluence does not have any "per unit time" in its units.																																																															
enumeration	Gyrofrequency	The number of gyrations around a magnetic guiding center (field line) a charged particle makes per unit time due to the Lorentz force.																																																															
enumeration	HeatFlux	Flow of thermal energy through a gas or plasma; typically computed as third moment of a distribution function.																																																															
enumeration	Mass	The measure of inertia (mass) of individual objects (e.g., aerosols).																																																															
enumeration	MassDensity	The mass of particles per unit volume.																																																															
enumeration	MassNumber	The total number of protons and neutrons (together known as nucleons) in an atomic nucleus.																																																															
enumeration	NumberDensity	The number of particles per unit volume.																																																															
enumeration	NumberFlux	The number of particles passing a unit area in unit time, possibly also per unit energy (or equivalent) and/or per unit look direction.																																																															
enumeration	ParticleRadius	The mean radius for a Gaussian distribution of particles with an axial ratio of 2 and a distribution width that varies as 0.5 radius. A value of zero means no cloud was detected.																																																															
enumeration	PhaseSpaceDensity	The number of particles per unit volume in																																																															

		the six-dimensional space of position and velocity.
enumeration	PlasmaFrequency	A number-density-dependent characteristic frequency of a plasma.
enumeration	Pressure	The force per unit area exerted by a particle distribution or field.
enumeration	SonicMachNumber	The ratio of the bulk flow speed to the speed of sound in the medium.
enumeration	SoundSpeed	The speed at which sound travels through a medium.
enumeration	Temperature	A measure of the kinetic energy of random motion with respect to the average. Temperature is properly defined only for an equilibrium particle distribution (Maxwellian distribution).
enumeration	ThermalSpeed	For a Maxwellian distribution, the difference between the mean speed and the speed within which ~69% (one sigma) of all the members of the speed distribution occur.
enumeration	Velocity	Rate of change of position. Also used for the average velocity of a collection of particles, also referred to as "bulk velocity".

## Simple Type enumEarth

Namespace	http://impexfp7.oeaw.ac.at
Annotations	Identifiers for the regions surrounding the Earth.

Diagram	 <p>Identifiers for the regions surrounding the Earth.</p> <p>Built-in primitive type. The string datatype represents character strings in XML.</p>	
Type	restriction of xsd:string	
Facets	enumeration	Magnetosheath The region between the bow shock and the magnetopause, characterized by very turbulent plasma.
	enumeration	Magnetosphere The region of space above the atmosphere or surface of the planet, and bounded by the magnetopause, that is under the direct influence of the planet's magnetic field.
	enumeration	Magnetosphere.Magnetotail The region on the night side of the body where the magnetic field is stretched backwards by the force of the solar wind. For Earth, the magnetotail begins at a night-side radial distance of 10 Re ( $X > -10Re$ ).
	enumeration	Magnetosphere.Main The region of the magnetosphere where the magnetic field lines are closed, but does not include the gaseous region gravitationally bound to the body.
	enumeration	Magnetosphere.Polar The region near the pole of a body. For a magnetosphere the polar region is the area where magnetic field lines are open and includes the auroral zone.
	enumeration	Magnetosphere.RadiationBelt The region within a magnetosphere where high-energy particles could potentially be trapped in a magnetic field.
	enumeration	NearSurface The gaseous and possibly ionized environment of a body extending from the surface to some specified altitude. For the Earth, this altitude is 2000 km.
	enumeration	NearSurface.Atmosphere The neutral gases surrounding a body that extends from the surface and is bound to the body by virtue of the gravitational attraction.
	enumeration	NearSurface.AuroralRegion The region in the atmospheric where electrically-charged particles bombarding the upper atmosphere of a planet in the presence of a magnetic field produce an optical phenomenon.
	enumeration	NearSurface.EquatorialRegion A region centered on the equator and limited in latitude by approximately 23 degrees north and south of the equator.
	enumeration	NearSurface.Ionosphere The charged or ionized gases surrounding a body that are nominally bound to the body by virtue of the gravitational attraction.
	enumeration	NearSurface.Ionosphere.DRegion The layer of the ionosphere that exists approximately 50 to 95 km above the surface of the Earth. One of several layers in the ionosphere.
	enumeration	NearSurface.Ionosphere.ERegion A layer of ionised gas occurring at 90-150km above the ground. One of several layers in the ionosphere. Also called the The Kennelly-Heaviside layer.
	enumeration	NearSurface.Ionosphere.FRegion A layer that contains ionized gases at a height of around 150-800 km above sea level, placing it in the thermosphere. the F region has the highest concentration of free electrons and ions anywhere in the atmosphere. It may be thought of as comprising two layers, the F1-and F2-layers. One of several layers in the ionosphere. Also known as the Appleton layer.
	enumeration	NearSurface.Ionosphere.Topside The region at the upper most areas of the ionosphere.
	enumeration	NearSurface.Mesosphere The layer of the atmosphere that extends from the Stratosphere to a range of 80 km to 85 km, temperature decreasing with height.
	enumeration	NearSurface.Plasmasphere A region of the magnetosphere consisting of low energy (cool) plasma. It is located above

		the ionosphere. The outer boundary of the plasmasphere is known as the plasmapause, which is defined by an order of magnitude drop in plasma density.
enumeration	NearSurface.PolarCap	The areas of the globe surrounding the poles and consisting of the region north of 60 degrees north latitude and the region south of 60 degrees south latitude.
enumeration	NearSurface.SouthAtlanticAnomalyRegion	Where the Earth's inner van Allen radiation belt makes its closest approach to the planet's surface. The result is that, for a given altitude, the radiation intensity is higher over this region than elsewhere.
enumeration	NearSurface.Stratosphere	The layer of the atmosphere that extends from the troposphere to about 30 km, temperature increases with height. The stratosphere contains the ozone layer.
enumeration	NearSurface.Thermosphere	The layer of the atmosphere that extends from the Mesosphere to 640+ km, temperature increasing with height.
enumeration	NearSurface.Troposphere	The lowest layer of the atmosphere which begins at the surface and extends to between 7 km (4.4 mi) at the poles and 17 km (10.6 mi) at the equator, with some variation due to weather factors.
enumeration	Surface	The outermost area of a solid object.

## Simple Type enumHardcopy

Namespace	http://impex-fp7.oeaw.ac.at		
Annotations	Identifiers for permanent reproductions, or copy in the form of a physical object, of any media suitable for direct use by a person.		
Diagram	<p>The diagram shows a UML class named "enumHardcopy" with a hollow diamond symbol indicating generalization. A line connects it to another class named "xsd:string". Below the classes are two callouts: one pointing to "enumHardcopy" with the text "Identifiers for permanent reproductions, or copy in the form of a physical object, of any media suitable for direct use...", and another pointing to "xsd:string" with the text "Built-in primitive type. The string datatype represents character strings in XML."</p>		
Type	restriction of xsd:string		
Facets	enumeration	Film	An image recording medium on which usually a "negative" analog image is registered. A "positive" image can be recovered or reproduced from film, which is usually made of flexible materials for ease of storage and transportation.
	enumeration	Microfiche	A sheet of microfilm on which many pages of material have been photographed; a magnification system is used to read the material.
	enumeration	Microfilm	Film rolls on which materials are photographed at greatly reduced size; a magnification system is used to read the material.
	enumeration	Photograph	An image (positive or negative) registered on a piece of photo-sensitive paper
	enumeration	PhotographicPlate	A rigid (typically glass) medium that functions like film. Its rigidity is for guarding against image distortion due to medium deformation (caused by heat and humidity). Photographic plates are often used for astronomical photography.
	enumeration	Print	A sheet of any written or printed material which may include notes or graphics. Multiple printed pages may be bound into a manuscript or book.

## Simple Type enumHeliosphere

Namespace	http://impex-fp7.oeaw.ac.at		
Annotations	Identifiers for regions of the solar atmosphere which extends roughly from the inner corona to the edge of the solar plasma at the heliopause separating primarily solar plasma from interstellar plasma.		
Diagram	<p>The diagram shows a UML class named "enumHeliosphere" with a hollow diamond symbol indicating inheritance, followed by a solid diamond symbol indicating composition. A line connects "enumHeliosphere" to another class labeled "xsd:string". Below the classes, two callouts provide additional information: one states "Identifiers for regions of the solar atmosphere which extends roughly from the inner corona to the edge of the solar plasma at the heliopause separating primarily solar plasma from interstellar plasma.", and the other states "Built-in primitive type. The string datatype represents character strings in XML."</p>		
Type	restriction of xsd:string		
Facets	enumeration	Heliosheath	The region extending radially outward from the heliospheric termination shock and in which the decelerated solar wind plasma is still significant.
	enumeration	Inner	The region of the heliosphere extending radially outward from the solar coronal base to just inside 1 AU.
	enumeration	NearEarth	The heliospheric region near the Earth which extends to and includes the area near the L1 and L2 Lagrange point.
	enumeration	Outer	The region of the heliosphere extending radially outward from just outside 1 AU to the heliospheric termination shock.
	enumeration	Remote1AU	A roughly toroidal region that includes the Earth's orbit, but exclusive of the region near the Earth.

## Simple Type enumMagnetosphere

Namespace	http://impexfp7.oeaw.ac.at	
Annotations	Identifiers for the region of space above the atmosphere or surface of the planet, and bounded by the magnetopause, that is under the direct influence of planet's magnetic field.	

Diagram	<p>Identifiers for the region of space above the atmosphere or surface of the planet, and bounded by the magnetopause....</p> <p>Built-in primitive type. The string datatype represents character strings in XML.</p>		
Type	restriction of xsd:string		
Facets	enumeration	Magnetotail	The region on the night side of the body where the magnetic field is stretched backwards by the force of the solar wind. For Earth, the magnetotail begins at a night-side radial distance of 10 Re ( $X > -10Re$ ).
	enumeration	Main	The region of the magnetosphere where the magnetic field lines are closed, but does not include the gaseous region gravitationally bound to the body.
	enumeration	Polar	The region near the pole of a body. For a magnetosphere the polar region is the area where magnetic field lines are open and includes the auroral zone.
	enumeration	RadiationBelt	The region within a magnetosphere where high-energy particles could potentially be trapped in a magnetic field.
Source	<pre>&lt;xsd:simpleType name="enumMagnetosphere"&gt;   &lt;xsd:annotation&gt;     &lt;xsd:documentation xml:lang="en"&gt;Identifiers for the region of space above the atmosphere or surface of the planet, and bounded by the magnetopause, that is under the direct influence of planet's magnetic field.&lt;/xsd:documentation&gt;   &lt;/xsd:annotation&gt;   &lt;xsd:restriction base="xsd:string"&gt;     &lt;xsd:enumeration value="Magnetotail"&gt;       &lt;xsd:annotation&gt;         &lt;xsd:documentation xml:lang="en"&gt;The region on the night side of the body where the magnetic field is stretched backwards by the force of the solar wind. ### Simple Type enumNearSurface

Namespace	http://impex-fp7.oeaw.ac.at		
Annotations	Identifiers for regions of the gaseous and possibly ionized environment of a body extending from the surface to some specified altitude.		
Diagram	<p>Identifiers for regions of the gaseous and possibly ionized environment of a body extending from the surface to some...</p> <p>Built-in primitive type. The string datatype represents character strings in XML.</p>		
Type	restriction of xsd:string		
Facets	enumeration	Atmosphere	The neutral gases surrounding a body that

		extends from the surface and is bound to the body by virtue of the gravitational attraction.
enumeration	AuroralRegion	The region in the atmospheric where electrically-charged particles bombarding the upper atmosphere of a planet in the presence of a magnetic field produce an optical phenomenon.
enumeration	EquatorialRegion	A region centered on the equator and limited in latitude by approximately 23 degrees north and south of the equator.
enumeration	Ionosphere	The charged or ionized gases surrounding a body that are nominally bound to the body by virtue of the gravitational attraction.
enumeration	Ionosphere.DRegion	The layer of the ionosphere that exists approximately 50 to 95 km above the surface of the Earth. One of several layers in the ionosphere.
enumeration	Ionosphere.ERegion	A layer of ionised gas occurring at 90-150km above the ground. One of several layers in the ionosphere. Also called the The Kennelly-Heaviside layer.
enumeration	Ionosphere.FRegion	A layer that contains ionized gases at a height of around 150-800 km above sea level, placing it in the thermosphere. the F region has the highest concentration of free electrons and ions anywhere in the atmosphere. It may be thought of as comprising two layers, the F1-and F2-layers. One of several layers in the ionosphere. Also known as the Appleton layer.
enumeration	Ionosphere.Topside	The region at the upper most areas of the ionosphere.
enumeration	Mesosphere	The layer of the atmosphere that extends from the Stratosphere to a range of 80 km to 85 km, temperature decreasing with height.
enumeration	Plasmasphere	A region of the magnetosphere consisting of low energy (cool) plasma. It is located above the ionosphere. The outer boundary of the plasmasphere is known as the plasmapause, which is defined by an order of magnitude drop in plasma density.
enumeration	PolarCap	The areas of the globe surrounding the poles and consisting of the region north of 60 degrees north latitude an the region south of 60 degrees south latitude.
enumeration	SouthAtlanticAnomalyRegion	The region where the Earth's inner van Allen radiation belt makes its closest approach to the planet's surface. The result is that, for a given altitude, the radiation intensity is higher over this region than elsewhere.
enumeration	Stratosphere	The layer of the atmosphere that extends from the troposphere to about 30 km, temperature increases with height. The stratosphere contains the ozone layer.
enumeration	Thermosphere	The layer of the atmosphere that extends from the Mesosphere to 640+ km, temperature increasing with height.
enumeration	Troposphere	The lowest layer of the atmosphere which begins at the surface and extends to between 7 km (4.4 mi) at the poles and 17 km (10.6 mi) at the equator, with some variation due to weather factors.

## Simple Type enumSun

Namespace	http://impex-fp7.oeaw.ac.at		
Annotations	Identifiers for regions of the star upon which our solar system is centered.		
Diagram	<p>The diagram shows a UML class named 'enumSun' with a multiplicity of 0..1. It has a directed association labeled with a circle containing a minus sign (-) pointing to a class named 'xsd:string'. A callout box below the association indicates: 'Identifiers for regions of the star upon which our solar system is centered.' Another callout box indicates: 'Built-in primitive type. The string datatype represents character strings in XML.'</p>		
Type	restriction of xsd:string		
Facets	enumeration	Chromosphere	The region of the Sun's (or a star's) atmosphere above the temperature minimum and below the Transition Region. The solar chromosphere is approximately 400 km to 2100 km above the photosphere, and characterized by temperatures from 4500 - 28000 K.
	enumeration	Corona	The outermost atmospheric region of the Sun or a star, characterized by ionization temperatures above $10^5$ K. The solar corona starts at about 2100 km above the photosphere; there is no generally defined upper limit.
	enumeration	Interior	The region inside the body which is not visible from outside the body.
	enumeration	Photosphere	The atmospheric layer of the Sun or a star from which continuum radiation, especially optical, is emitted to space. For the Sun, the photosphere is about 500 km thick.
	enumeration	TransitionRegion	A very narrow (<100 km) layer between the chromosphere and the corona where the temperature rises abruptly from about 8000 to about 500,000 K.
Source	<pre> &lt;xsd:simpleType name="enumSun"&gt;   &lt;xsd:annotation&gt;     &lt;xsd:documentation xml:lang="en"&gt;Identifiers for regions of the star upon which our solar system is centered. &lt;/xsd:documentation&gt;   &lt;/xsd:annotation&gt;   &lt;xsd:restriction base="xsd:string"&gt;     &lt;xsd:enumeration value="Chromosphere"&gt;       &lt;xsd:annotation&gt;         &lt;xsd:documentation xml:lang="en"&gt;The region of the Sun's (or a star's) atmosphere above the temperature minimum and below the Transition Region. ## Simple Type enumSimulationType

Namespace	http://impexfp7.oeaw.ac.at																			
Annotations	Identifiers for the characterization of the numerical scheme used in the simulation.																			
Diagram	<p>The diagram shows a UML class named "enumSimulationType" with a hollow diamond symbol indicating it is a derived class. It has a directed association line pointing to another class labeled "xsd:string". A callout box below the diagram states: "Identifiers for the characterization of the numerical scheme used in the simulation." Another callout box to the right of the diagram states: "Built-in primitive type. The string datatype represents character strings in XML."</p>																			
Type	restriction of xsd:string																			
Facets	<table border="1"> <tr> <td>enumeration</td> <td>Analytic</td> <td></td> </tr> <tr> <td>enumeration</td> <td>Hybrid</td> <td>A numerical scheme simulating ions as particles and electrons as a fluid.</td> </tr> <tr> <td>enumeration</td> <td>MHD</td> <td>A numerical scheme simulating the plasma as a fluid.</td> </tr> <tr> <td>enumeration</td> <td>PIC</td> <td>A numerical scheme simulating ions and electrons as macroparticles.</td> </tr> <tr> <td>enumeration</td> <td>Test_Particle</td> <td>A numerical scheme simulating the motion of charged particles in a prescribed field.</td> </tr> <tr> <td>enumeration</td> <td>Paraboloid</td> <td></td> </tr> </table>		enumeration	Analytic		enumeration	Hybrid	A numerical scheme simulating ions as particles and electrons as a fluid.	enumeration	MHD	A numerical scheme simulating the plasma as a fluid.	enumeration	PIC	A numerical scheme simulating ions and electrons as macroparticles.	enumeration	Test_Particle	A numerical scheme simulating the motion of charged particles in a prescribed field.	enumeration	Paraboloid

Properties	content: simple	
Used by	Complex Type DiagnosisTimeStep	
Source	<xsd:attribute name="Duration" type="xsd:duration"/>	

**Attribute InputValue / @Units**

Namespace	No namespace	
Annotations	A description of the standardized measurement increments in which a value is specified. The description is represented as a mathematical phrase. Units should be represented by widely accepted representation. For example, units should conform to the International System of Units (SI) which is maintained by BIPM (Bureau International des Poids et Mesures (see <http://www.bipm.fr/>) ) when appropriate or use tokens like "Re" to represent units of the Radius of the Earth. Within a phrase the circumflex (^) is used to indicate a power, a star (*) is used to indicate multiplication and a slash (/) division. When symbols are not separated by a mathematical operator, multiplication is assumed. Symbols for base units can be found at: <http://www.bipm.fr/en/si/si_brochure/chapter2/2-1/#symbols> and those for common derived units can be found at: <http://www.bipm.fr/en/si/derived_units/2-2-2.html>	
Type	xsd:string	
Properties	content: simple	
Used by	Complex Type InputValue	
Source	<xsd:attribute name="Units" type="xsd:string">   <xsd:annotation>     <xsd:documentation xml:lang="en">A description of the standardized measurement increments in which a value is specified. **Attribute InputValue / @UnitsConversion**

Namespace	No namespace	
Annotations	The multiplicative factor for converting a unit into International System of Units (SI) units. The factor is expressed in the form "number > x", where "number" is a numerical value and "x" is the appropriate SI units. The basic SI units are Enumerated: m (meter), N (newton), kg (kilogram), Pa (pascal), s (second), Hz (hertz), A (ampere), V (volt), K (kelvin), W (watt), rad (radian), J (joule), sr (steradian), C (coulomb), T (tesla), ohm (ohm), mho (mho or seimens), H (henry), and F (farad). Two useful units which are not SI units are: degree (angle), and unitless (no units). An example is: "1.0E-5>T" which converts the units, presumably nT, to tesla. Another example is: "1.0e+3>m/s" which converts a velocity expressed in kilometers per second to meters per second.	
Type	xsd:string
