Properties	attribute form default: unqualified element form default: qualified

Element(s)

Element Spase

Namespace	http://impex-fp7.oeaw.ac.at
Diagram	Type	Spase
Properties	content: complex

Model	Version , ResourceEntity+
Children	ResourceEntity, Version
Instance	<Spase lang="en" xmlns="http://impex-fp7.oeaw.ac.at"> <Version>{1,1}</Version> <ResourceEntity>{1,unbounded}</ResourceEntity> </Spase>
Attributes	**QName** / **Type** / **Default** / **Use** **lang** / xsd:string / en / optional
Source	<xsd:element name="Spase" type="Spase"/>

Element `Version`

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	Indicates the release identifier. When used to indicate the release of the SPASE data model, it is a in the form Major.Minor.Fix where Major: A significant change in the architecture of the model or rewrite of the implementation. This includes major changes in design or implementation language. This number starts at 0 (zero). Minor: An addition of terms or features that require changes in documentation/external API. This number starts at 0 (zero). Fix: Any change that doesn't require documentation/external API changes. This number starts at 0 (zero).
Diagram	Type	enumVersion
Properties	content: simple
Facets	enumeration 2.2.2
Used by	Complex Type Spase
Source	<xsd:element name="Version" type="enumVersion"> <xsd:annotation> <xsd:documentation xml:lang="en">Indicates the release identifier. Source	<xsd:element name="ResourceID" type="ResourceID"/>

Element ResourceHeader

Namespace	http://impex-fp7.oeaw.ac.at

Diagram	Type	ResourceHeader
Properties	content: `complex`
Used by	Complex Types: Annotation, Catalog, DisplayData, DisplayOutput, Document, Instrument, NumericalData, NumericalOutput, Observatory, Registry, Repository, Service, SimulationModel, SimulationRun
Model	ResourceName , AlternateName* , ReleaseDate , ExpirationDate{0,1} , Description , Acknowledgement{0,1} , Contact+ , InformationURL* , Association* , PriorID*
Children	Acknowledgement, AlternateName, Association, Contact, Description, ExpirationDate, InformationURL, PriorID, ReleaseDate, ResourceName

Instance	<pre><ResourceHeader xmlns="http://impex-fp7.oeaw.ac.at">
	  <ResourceName>{1,1}</ResourceName>
	  <AlternateName>{0,unbounded}</AlternateName>
	  <ReleaseDate>{1,1}</ReleaseDate>
	  <ExpirationDate>{0,1}</ExpirationDate>
	  <Description>{1,1}</Description>
	  <Acknowledgement>{0,1}</Acknowledgement>
	  <Contact>{1,unbounded}</Contact>
	  <InformationURL>{0,unbounded}</InformationURL>
	  <Association>{0,unbounded}</Association>
	  <PriorID>{0,unbounded}</PriorID>
	</ResourceHeader></pre>

Source	`<xsd:element name="ResourceHeader" type="ResourceHeader"/>`

Element ResourceName

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	A short textual description of a resource which may be useful when read by a person.
Diagram	Type	xsd:string
Properties	content: simple
Used by	Complex Type ResourceHeader
Source	<xsd:element name="ResourceName" type="xsd:string"> <xsd:annotation> <xsd:documentation xml:lang="en">A short textual description of a resource which may be useful when read by a person.</xsd:documentation> </xsd:annotation> </xsd:element>

Element AlternateName

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	An alternative or shortened name used to refer to a resource. This includes acronyms, expanded names or a synonym for a resource.
Diagram	Type	xsd:string
Properties	content: simple
Used by	Complex Type ResourceHeader
Source	<xsd:element name="AlternateName" type="xsd:string"> <xsd:annotation> <xsd:documentation xml:lang="en">An alternative or shortened name used to refer to a resource. This includes acronyms, expanded names or a synonym for a resource.</xsd:documentation> </xsd:annotation> </xsd:element>

Element ReleaseDate

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	The date and time when a resource is made available. The availability of a resource coincides with the release of a resource description. If the Release Date is specified as a future date then it indicates that resource should not be made available until that time. However, this is only advisory and in practice the Release Date should be the actual date the resource description was published.
Diagram	Type	xsd:dateTime
Properties	content: simple

Used by	Complex Types	Granule, ModelVersion, Person, ResourceHeader
Source	<xsd:element name="ReleaseDate" type="xsd:dateTime"> <xsd:annotation> <xsd:documentation xml:lang="en">The date and time when a resource is made available. However, this is only advisory and in practice a resource description should be unpublished to eliminate access to a resource.</xsd:documentation> </xsd:annotation> </xsd:element>	

Element Description

Namespace	http://impex-fp7.oeaw.ac.at	
Annotations	A narrative explanation with detail appropriate for the item it describes. For example a description of data resource should include discussions of the main quantities in the resource, possible uses and search terms. A description should also include whether any corrections (i.e, geometry, inertial) have been applied to the resource.	
Diagram		
Type	xsd:string	
Properties	content:	simple
Used by	Complex Types	AccessURL, InformationURL, InputField, InputParameter, InputPopulation, InputProcess, ModelVersion, Parameter, Property, RegionParameter, ResourceHeader, SimulationDomain, SimulationTime, Structure
Source	<xsd:element name="Description" type="xsd:string"> <xsd:annotation> <xsd:documentation xml:lang="en">A narrative explanation with detail appropriate for the item it describes. ```
 include whether any corrections (i.e, geometry, inertial) have been applied to the resource.</
xsd:documentation>
  </xsd:annotation>
</xsd:element>
```

Element Acknowledgement

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	The individual, group or organization which should be acknowledged when the data is used in or contributes to a presentation or publication.
Diagram	Type	xsd:string
Properties	content: simple
Used by	Complex Types AccessInformation, ResourceHeader
Source	<xsd:element name="Acknowledgement" type="xsd:string"> <xsd:annotation> <xsd:documentation xml:lang="en">The individual, group or organization which should be acknowledged when the data is used in or contributes to a presentation or publication.</xsd:documentation> </xsd:annotation> </xsd:element>

Element Contact

Namespace	http://impex-fp7.oeaw.ac.at
Diagram	Type	Contact
Properties	content: complex
Used by	Complex Type ResourceHeader
Model	PersonID , Role+
Children	PersonID, Role
Instance	<Contact xmlns="http://impex-fp7.oeaw.ac.at"> <PersonID>{1,1}</PersonID> <Role>{1,unbounded}</Role> </Contact>
Source	<xsd:element name="Contact" type="Contact"/>

Element PersonID

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	The identifier assigned to a Person description.
Diagram	
Type	xsd:string	
Properties	content:	simple
Used by	Complex Type	Contact
Source	<xsd:element name="PersonID" type="xsd:string"> <xsd:annotation> <xsd:documentation xml:lang="en">The identifier assigned to a Person description.</ xsd:documentation> </xsd:annotation> </xsd:element>	

Element Role

Namespace	http://impex-fp7.oeaw.ac.at		
Annotations	The assigned or assumed function or position of an individual.		
Diagram			
Type	enumRole		
Properties	content:	simple	
Facets	enumeration	ArchiveSpecialist	An individual who is an expert on a collection of resources and may also be knowledgeable of the phenomenon and related physics represented by the resources. This includes librarians, curators, archive scientists and other experts.
	enumeration	CoInvestigator	An individual who is a scientific peer and major participant in an investigation.
	enumeration	Contributor	An entity responsible for making contributions to the content of the resource.
	enumeration	DataProducer	An individual who generated the resource and is familiar with its provenance.
	enumeration	DeputyPI	An individual who is an administrative or scientific leader for an investigation operating under the supervision of a Principal Investigator.
	enumeration	FormerPI	An individual who had served as the administrative and scientific lead for an investigation, but no longer assumes that role.
	enumeration	GeneralContact	An individual who can provide information on a range of subjects or who can direct you to a domain expert.
	enumeration	MetadataContact	An individual who can affect a change in the metadata describing a resource.
	enumeration	PrincipalInvestigator	An individual who is the administrative and scientific lead for an investigation.
	enumeration	ProjectScientist	An individual who is an expert in the phenomenon and related physics explored by the project. A project scientist may also have a managerial role within the project.
	enumeration	Publisher	An individual, organization, institution or government department responsible for the production and dissemination of a document.
	enumeration	Scientist	An individual who is an expert in the phenomenon and related physics represented by the resource.
	enumeration	TeamLeader	An individual who is the designated leader of an investigation.
	enumeration	TeamMember	An individual who is a major participant in an investigation.
	enumeration	TechnicalContact	An individual who can provide specific information with regard to the resource or supporting software

Used by	Complex Type	Contact
Source	<xsd:element name="Role" type="enumRole"> <xsd:annotation> <xsd:documentation xml:lang="en">The assigned or assumed function or position of an individual.</xsd:documentation> </xsd:annotation> </xsd:element>	

Element InformationURL

Namespace	http://impex-fp7.oeaw.ac.at	
Diagram		
Type	InformationURL	
Properties	content:	complex
Used by	Complex Type	ResourceHeader
Model	Name{0,1} , URL , Description{0,1} , Language{0,1}	
Children	Description, Language, Name, URL	
Instance	<InformationURL xmlns="http://impex-fp7.oeaw.ac.at"> <Name>{0,1}</Name> <URL>{1,1}</URL> <Description>{0,1}</Description> <Language>{0,1}</Language> </InformationURL>	
Source	<xsd:element name="InformationURL" type="InformationURL"/>	

Element Name

Namespace	http://impex-fp7.oeaw.ac.at	
Annotations	A language unit by which a person or thing is known.	
Diagram		
Type	xsd:string	
Properties	content:	simple
Used by	Complex Types	AccessURL, Element, InformationURL, InputField, InputParameter, InputPopulation, InputProcess, Parameter, Property
Source	<xsd:element name="Name" type="xsd:string">

xsd:documentation>
  </xsd:annotation>
</xsd:element>
```

Element URL

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	Uniform Resource Locator (URL) is the global address of documents and other resources on the World Wide Web. The first part of the address indicates what protocol to use, and the second part specifies the IP address or the domain name where the resource is located followed by the pathname of the resource. A URL is specified in the form protocol://server.domain.name:port/pathname. Example protocols are HTTP or FTP, server domain name is the Internet name.
Diagram	Type	xsd:string
Properties	content: simple
Used by	Complex Types AccessURL, InformationURL, Source
Source	<xsd:element name="URL" type="xsd:string"> <xsd:annotation> <xsd:documentation xml:lang="en">Uniform Resource Locator (URL) is the global address of documents and other resources on the World Wide Web. A URL is specified in the form protocol://server.domain.name:port/pathname. Example protocols are HTTP or FTP, server domain name is the Internet name.</xsd:documentation> </xsd:annotation> </xsd:element>

Element Language

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	The two character indicator of language selected from the ISO 630-1 codes for the representation of names of languages.
Diagram	
Type	xsd:string
Properties	content: simple
Used by	Complex Types AccessURL, InformationURL
Source	<xsd:element name="Language" type="xsd:string"> <xsd:annotation> <xsd:documentation xml:lang="en">The two character indicator of language selected from the ISO 630-1 codes for the representation of names of languages.</xsd:documentation> </xsd:annotation> </xsd:element>

Element Association

Namespace	http://impex-fp7.oeaw.ac.at

Diagram	Type	Association
Properties	content: complex
Used by	Complex Type ResourceHeader
Model	AssociationID , AssociationType , Note{0,1}
Children	AssociationID, AssociationType, Note

Instance	`<Association xmlns="http://impex-fp7.oeaw.ac.at">`
	`  <AssociationID>{1,1}</AssociationID>`
	`  <AssociationType>{1,1}</AssociationType>`
	`  <Note>{0,1}</Note>`
	`</Association>`

Source	`<xsd:element name="Association" type="Association"/>`

Element AssociationID

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	The resource identifier for a resource with which this resource is closely associated.
Diagram	Type	xsd:string
Properties	content: simple
Used by	Complex Type Association

Source	`<xsd:element name="AssociationID" type="xsd:string">`
	`  <xsd:annotation>`
	`  <xsd:documentation xml:lang="en">The resource identifier for a resource with which this resource is closely associated.</xsd:documentation>`
	`  </xsd:annotation>`
	`</xsd:element>`

Element AssociationType

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	A characterization of the role or purpose of an associated resource.
Diagram	Type	enumAssociationType
Properties	content: simple

Facets	enumeration	ChildEventOf	A descendant or caused by another resource.
	enumeration	DerivedFrom	A transformed or altered version of a resource instance.
	enumeration	ObservedBy	Detected or originating from another resource.
	enumeration	Other	Not classified with more specific terms. The context of its usage may be described in related text.
	enumeration	PartOf	A portion of a larger resource.
	enumeration	RevisionOf	A modified version of a resource instance.
Used by	Complex Type	Association	
Source	<xsd:element name="AssociationType" type="enumAssociationType"> <xsd:annotation> <xsd:documentation xml:lang="en">A characterization of the role or purpose of an associated resource.</xsd:documentation> </xsd:annotation> </xsd:element>		

Element Note

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	Information which is useful or important for the understanding of a value or parameter.
Diagram	Type	xsd:string
Properties	content: simple
Used by	Complex Types: Association, ObservationExtent, OperatingSpan, Person, TimeSpan
Source	<xsd:element name="Note" type="xsd:string"> <xsd:annotation> <xsd:documentation xml:lang="en">Information which is useful or important for the understanding of a value or parameter.</xsd:documentation> </xsd:annotation> </xsd:element>

Element PriorID

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	The resource identifier for a resource that is superseded or replaced by a resource.
Diagram	Type	xsd:string
Properties	content: simple
Used by	Complex Types: Granule, ResourceHeader
Source	<xsd:element name="PriorID" type="xsd:string"> <xsd:annotation> <xsd:documentation xml:lang="en">The resource identifier for a resource that is superseded or replaced by a resource.</xsd:documentation> </xsd:annotation> </xsd:element>

Element AccessInformation

Namespace	http://impex-fp7.oeaw.ac.at

Diagram	Type	AccessInformation
Properties	content: complex
Used by	Complex Types: Catalog, DisplayData, DisplayOutput, Document, NumericalData, NumericalOutput, SimulationRun
Model	RepositoryID , Availability{0,1} , AccessRights{0,1} , AccessURL+ , Format , Encoding{0,1} , DataExtent{0,1} , Acknowledgement{0,1}
Children	AccessRights, AccessURL, Acknowledgement, Availability, DataExtent, Encoding, Format, RepositoryID

Instance	`<AccessInformation xmlns="http://impex-fp7.oeaw.ac.at">`
	`<RepositoryID>{1,1}</RepositoryID>`
	`<Availability>{0,1}</Availability>`
	`<AccessRights>{0,1}</AccessRights>`
	`<AccessURL>{1,unbounded}</AccessURL>`
	`<Format>{1,1}</Format>`
	`<Encoding>{0,1}</Encoding>`
	`<DataExtent>{0,1}</DataExtent>`
	`<Acknowledgement>{0,1}</Acknowledgement>`
	`</AccessInformation>`

Source	`<xsd:element name="AccessInformation" type="AccessInformation"/>`

Element RepositoryID

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	The identifier of an Repository resource.
Diagram	Type	xsd:string

Properties	content:	simple
Used by	Complex Type	AccessInformation
Source	<xsd:element name="RepositoryID" type="xsd:string"> <xsd:annotation> <xsd:documentation xml:lang="en">The identifier of an Repository resource.</xsd:documentation> </xsd:annotation> </xsd:element>	

Element Availability

Namespace	http://impex-fp7.oeaw.ac.at		
Annotations	An indication of the method or service which may be used to access the resource.		
Diagram			
Type	enumAvailability		
Properties	content:	simple	
Facets	enumeration	Offline	Not directly accessible electronically. This includes resources which may to be moved to an on-line status in response to a given request.
	enumeration	Online	Directly accessible electronically.
Used by	Complex Type	AccessInformation	
Source	<xsd:element name="Availability" type="enumAvailability"> <xsd:annotation> <xsd:documentation xml:lang="en">An indication of the method or service which may be used to access the resource.</xsd:documentation> </xsd:annotation> </xsd:element>		

Element AccessRights

Namespace	http://impex-fp7.oeaw.ac.at		
Annotations	Permissions granted or denied by the host of a product to allow other users to access and use the resource.		
Diagram			
Type	enumAccessRights		
Properties	content:	simple	
Facets	enumeration	Open	Access is granted to everyone.
	enumeration	Restricted	Access to the product is regulated and requires some form of identification.
Used by	Complex Type	AccessInformation	
Source	<xsd:element name="AccessRights" type="enumAccessRights"> <xsd:annotation> <xsd:documentation xml:lang="en">Permissions granted or denied by the host of a product to allow other users to access and use the resource.</xsd:documentation> </xsd:annotation> </xsd:element>		

Element AccessURL

Namespace	http://impex-fp7.oeaw.ac.at

Diagram	Type	AccessURL
Properties	content: complex
Used by	Complex Types AccessInformation, Registry, Repository, Service
Model	Name{0,1} , URL , ProductKey* , Description{0,1} , Language{0,1}
Children	Description, Language, Name, ProductKey, URL

Instance	<pre><AccessURL xmlns="http://impex-fp7.oeaw.ac.at">
	  <Name>{0,1}</Name>
	  <URL>{1,1}</URL>
	  <ProductKey>{0,unbounded}</ProductKey>
	  <Description>{0,1}</Description>
	  <Language>{0,1}</Language>
	</AccessURL></pre>

Source	<pre><xsd:element name="AccessURL" type="AccessURL"/></pre>

Element ProductKey

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	The key (identifier) of the resource within a Repository. This is a local identifier which can be used to retrieve or locate the resource.
Diagram	Type	xsd:string
Properties	content: simple
Used by	Complex Type AccessURL

Source	<pre><xsd:element name="ProductKey" type="xsd:string">
	  <xsd:annotation>
	  <xsd:documentation xml:lang="en">The key (identifier) of the resource within a Repository. This is a local identifier which can be used to retrieve or locate the resource.</xsd:documentation>
	  </xsd:annotation>
	</xsd:element></pre>

Element Format

Namespace	http://impex-fp7.oeaw.ac.at		
Annotations	The organization of data according to preset specifications. The value is selected from a list of accepted names for known, well documented formats.		
Diagram			
Type	enumFormat		
Properties	content:	simple	
Facets	enumeration	AVI	Audio Video Interleave (AVI) a digital format for movies that conforms to the Microsoft Windows Resource Interchange File Format (RIFF).
	enumeration	Binary	A direct representation of the bits which may be stored in memory on a computer.
	enumeration	CDF	Common Data Format (CDF). A binary storage format developed at Goddard Space Flight Center (GSFC).
	enumeration	CEF	Cluster Exchange Format (CEF) is a self-documenting ASCII format designed for the exchange of data. There are two versions of CEF which are not totally compatible.
	enumeration	CEF1	Cluster Exchange Format (CEF), version 1, is a self-documenting ASCII format designed for the exchange of data. The metadata contains information compatible with the ISTP recommendations for CDF.
	enumeration	CEF2	Cluster Exchange Format (CEF), version 2, is a self-documenting ASCII format designed for the exchange of data and introduced for Cluster Active Archive. Compared to version 1, the metadata description of vectors and tensors is different.
	enumeration	Excel	A Microsoft spreadsheet format used to hold a variety of data in tables which can include calculations.
	enumeration	FITS	Flexible Image Transport System (FITS) is a digital format primarily designed to store scientific data sets consisting of multi-dimensional arrays (1-D spectra, 2-D images or 3-D data cubes) and 2-dimensional tables containing rows and columns of data.
	enumeration	GIF	Graphic Interchange Format (GIF) first introduced in 1987 by CompuServe. GIF uses LZW compression and images are limited to 256 colours.
	enumeration	HDF	Hierarchical Data Format
	enumeration	HDF4	Hierarchical Data Format, Version 4
	enumeration	HDF5	Hierarchical Data Format, Version 5
	enumeration	HTML	A text file containing structured information represented in the HyperText Mark-up Language (HTML). See <http://www.w3.org/MarkUp/>
	enumeration	Hardcopy	A permanent reproduction, or copy in the form of a physical object, of any media suitable for direct use by a person.
	enumeration	Hardcopy.Film	An image recording medium on which usually a "negative" analog image is registered. A "positive" image can be recovered or reproduced from film, which is usually made of flexible materials for ease of storage and transportation.
	enumeration	Hardcopy.Microfiche	A sheet of microfilm on which many pages of

		material have been photographed; a magnification system is used to read the material.
enumeration	Hardcopy.Microfilm	Film rolls on which materials are photographed at greatly reduced size; a magnification system is used to read the material.
enumeration	Hardcopy.Photograph	An image (positive or negative) registered on a piece of photo-sensitive paper
enumeration	Hardcopy.PhotographicPlate	A rigid (typically glass) medium that functions like film. Its rigidity is for guarding against image distortion due to medium deformation (caused by heat and humidity). Photographic plates are often used for astronomical photography.
enumeration	Hardcopy.Print	A sheet of any written or printed material which may include notes or graphics. Multiple printed pages may be bound into a manuscript or book.
enumeration	IDFS	Instrument Data File Set (IDFS) is a set of files written in a prescribed format which contain data, timing data, and meta-data. IDFS was developed at Southwest Research Institute (SwRI).
enumeration	IDL	Interactive Data Language (IDL) save set. IDL is a proprietary format.
enumeration	JPEG	A binary format for still images defined by the Joint Photographic Experts Group
enumeration	MATLAB_4	MATLAB Workspace save set, version 4. MAT-files are double-precision, binary, MATLAB format files. MATLAB is a proprietary product of The MathWorks.
enumeration	MATLAB_6	MATLAB Workspace save set, version 6. MAT-files are double-precision, binary, MATLAB format files. MATLAB is a proprietary product of The MathWorks.
enumeration	MATLAB_7	MATLAB Workspace save set, version 7. MAT-files are double-precision, binary, MATLAB format files. Version 7 includes data compression and Unicode encoding. MATLAB is a proprietary product of The MathWorks.
enumeration	MPEG	A digital format for movies defined by the Motion Picture Experts Group
enumeration	NCAR	The National Center for Atmospheric Research (NCAR) format. A complete description of that standard is given in appendix C of the "Report on Establishment & Operation of the Incoherent-Scatter Data Base", dated August 23, 1984, obtainable from NCAR, P.O. Box 3000 Boulder, Colorado 80307-3000.
enumeration	NetCDF	Unidata Program Center's Network Common Data Form (NetCDF). A self-describing portable data format for array-oriented data access. See <http://my.unidata.ucar.edu/content/software/netcdf>
enumeration	PDF	A document expressed in the Portable Document Format (PDF) as defined by Adobe.
enumeration	PNG	A digital format for still images. Portable Network Graphics (PNG)
enumeration	Postscript	A page description programming language created by Adobe Systems Inc. that is a device-independent industry standard for representing text and graphics.
enumeration	QuickTime	A format for digital movies, as defined by Apple Computer. See <http://developer.apple.com/quicktime/>
enumeration	TIFF	A binary format for still pictures. Tagged Image Format File (TIFF). Originally developed by Aldus and now controlled by Adobe.
enumeration	Text	A sequence of characters which may have an imposed structure or organization.
enumeration	Text.ASCII	A sequence of characters that adheres to American

			Standard Code for Information Interchange (ASCII) which is an 7-bit character-coding scheme.
	enumeration	Text.Unicode	Text in multi-byte Unicode format.
	enumeration	UDF	Universal Data Format (UDF). The Optical Technology Storage Association's Universal Disk Format, based on ISO 13346. See <http://www.osta.org/specs/index.htm>
	enumeration	VOTable	A proposed IVOA standard designed as a flexible storage and exchange format for tabular data.
	enumeration	XML	eXtensible Mark-up Language (XML). A structured format for representing information. See <http://www.w3.org/XML/>
Used by	Complex Type	AccessInformation	
Source	<xsd:element name="Format" type="enumFormat"> <xsd:annotation> <xsd:documentation xml:lang="en">The organization of data according to preset specifications. The value is selected from a list of accepted names for known, well documented formats.</xsd:documentation> </xsd:annotation> </xsd:element>		

Element Encoding

Namespace	http://impex-fp7.oeaw.ac.at		
Annotations	A set of unambiguous rules that establishes the representation of information within a file.		
Diagram			
Type	enumEncoding		
Properties	content:	simple	
Facets	enumeration	ASCII	A sequence of characters that adheres to American Standard Code for Information Interchange (ASCII) which is an 7-bit character-coding scheme.
	enumeration	BZIP2	An open standard algorithm by Julian Seward using Burrows-Wheeler block sorting and Huffman coding. See <http://www.bzip.org/>
	enumeration	Base64	A data encoding scheme whereby binary-encoded data is converted to printable ASCII characters. It is defined as a MIME content transfer encoding for use in Internet e-mail. The only characters used are the upper- and lower-case Roman alphabet characters (A-Z, a-z), the numerals (0-9), and the "+" and "/" symbols, with the "=" symbol as a special suffix (padding) code.
	enumeration	GZIP	An open standard algorithm distributed by GHU based on LZ77 and Huffman coding. See <http://www.gnu.org/software/gzip/gzip.html> or <http://www.gzip.org/>
	enumeration	None	A lack or absence of anything.
	enumeration	S3_BUCKET	A container of objects that comply with the Amazon Simple Storage Service (S3) specifications. A bucket has a unique, user-assigned key (name). A bucket can contain any number of objects with an aggregate size of 5 gigabytes. A bucket may be accompanied by up to 2 kilobytes of metadata.
	enumeration	TAR	A file format used to collate collections of files into one larger file, for distribution or archiving, while preserving file system information such as user and group permissions, dates, and directory structures. The format

			was standardized by POSIX.1-1988 and later POSIX.1-2001.
	enumeration	Unicode	Text in multi-byte Unicode format.
	enumeration	ZIP	An open standard for compression which is a variation of the LZW method and was originally used in the PKZIP utility.

Element Units

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	A description of the standardized measurement increments in which a value is specified. The description is represented as a mathematical phrase. Units should be represented by widely accepted representation. For example, units should conform to the International System of Units (SI) which is maintained by BIPM (Bureau International des Poids et Mesures (see <http://www.bipm.fr/>) when appropriate or use tokens like "Re" to represent units of the Radius of the Earth. Within a phrase the circumflex (^) is used to indicate a power, a star (*) is used to indicate multiplication and a slash (/) division. When symbols are not separated by a mathematical operator, multiplication is assumed. Symbols for base units can be found at: <http://www.bipm.fr/en/si/si_brochure/chapter2/2-1/#symbols> and those for common derived units can be found at: <http://www.bipm.fr/en/si/derived_units/2-2-2.html>

Element PhenomenonType

Namespace	http://impex-fp7.oeaw.ac.at		
Annotations	The characteristics or categorization of an event type.		
Diagram			
Type	enumPhenomenonType		
Properties	content:	simple	
Facets	enumeration	ActiveRegion	A localized, transient volume of the solar atmosphere in which PLAGEs, SUNSPOTS, FACULAe, FLAREs, etc. may be observed.
	enumeration	Aurora	An atmospheric phenomenon consisting of bands of light caused by charged solar particles following the earth's magnetic lines of force.
	enumeration	BowShockCrossing	A crossing of the boundary between the undisturbed (except for foreshock effects) solar wind and the shocked, decelerated solar wind of the magnetosheath.
	enumeration	CoronalHole	An extended region of the corona, exceptionally low in density and associated with unipolar photospheric regions. A coronal hole can be an "open" magnetic field in the corona and (perhaps) inner heliosphere which has a faster than average outflow (wind); A region of lower than "quiet" ion and electron density in the corona; or a region of lower peak electron temperature in the corona than in the "quiet" corona.
	enumeration	CoronalMassEjection	A solar event (CME) that involves a burst of plasma ejected into the interplanetary medium. CME's may be observed remotely relatively near the sun or in situ in the interplanetary medium. The latter type of observations are often referred to as Interplanetary CME's (ICME's).
	enumeration	EITWave	A wave in the corona of the Sun which produce shock waves on the Sun's chromosphere (Moreton Waves). EIT Waves are produced by large solar flare and expand outward at about 1,000 km/s. It usually appears as a slowly moving diffuse arc of brightening in H-alpha, and may travel for several hundred thousand km.
	enumeration	EnergeticSolarParticleEvent	An enhancement of interplanetary fluxes of energetic ions accelerated by interplanetary shocks and/or solar flares.
	enumeration	ForbushDecrease	A rapid decrease in the observed galactic cosmic ray intensity following the passage of an outwardly convecting interplanetary magnetic field disturbance, such as those associated with large CME's, that sweep some galactic cosmic rays away from Earth.
	enumeration	GeomagneticStorm	A magnetospheric disturbance typically defined by variations in the horizontal component of the Earth's surface magnetic field. The variation typically starts with a field enhancement

			associated with a solar wind pressure pulse and continues with a field depression associated with an enhancement of the diamagnetic magnetospheric ring current.
	enumeration	InterplanetaryShock	A shock propagating generally anti-sunward through the slower solar wind, often seen in front of CME-associated plasma clouds.
	enumeration	MagneticCloud	A transient event observed in the solar wind characterized as a region of enhanced magnetic field strength, smooth rotation of the magnetic field vector and low proton density and temperature.
	enumeration	MagnetopauseCrossing	A crossing of the interface between the shocked solar wind in the magnetosheath and the magnetic field and plasma in the magnetosphere.
	enumeration	RadioBurst	Emissions of the sun in radio wavelengths from centimeters to dekameters, under both quiet and disturbed conditions. Radio Bursts can be "Type I" consisting of many short, narrow-band bursts in the metric range (300 - 50 MHz).; "Type II" consisting of narrow-band emission that begins in the meter range (300 MHz) and sweeps slowly (tens of minutes) toward dekameter wavelengths (10 MHz).; "Type III" consisting of narrow-band bursts that sweep rapidly (seconds) from decimeter to dekameter wavelengths (500 - 0.5 MHz); and "Type IV" consisting of a smooth continuum of broad-band bursts primarily in the meter range (300 - 30 MHz).
	enumeration	SectorBoundaryCrossing	A sector boundary crossing is a transit by a spacecraft across the heliospheric current sheet separating the dominantly outward (away-from-the-sun) interplanetary magnetic field of one hemisphere of the heliosphere from the dominantly inward (toward-the-sun) polarity of the other hemisphere. Such crossings have multi-day intervals of opposite IMF dominant polarities on either side.
	enumeration	SolarFlare	An explosive event in the Sun's atmosphere which produces electromagnetic radiation across the electromagnetic spectrum at multiple wavelengths from long-wave radio to the shortest wavelength gamma rays.
	enumeration	SolarWindExtreme	Intervals of unusually large or small values of solar wind attributes such as flow speed and ion density.
	enumeration	StreamInteractionRegion	The region (SIR) where two solar wind streams, typically having differing characteristics and solar sources, abut up against (and possibly partially interpenetrate) each other.
	enumeration	Substorm	A process by which plasma in the magnetotail becomes energized at a fast rate.

Element UnitsConversion

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	The multiplicative factor for converting a unit into International System of Units (SI) units. The factor is expressed in the form "number > x", where "number" is a numerical value and "x" is the appropriate SI units. The basic SI units are Enumerated: m (meter), N (newton), kg (kilogram), Pa (pascal), s (second), Hz (hertz), A (ampere), V (volt), K (kelvin), W (watt), rad (radian), J (joule), sr (steradian), C (coulomb), T (tesla), ohm (ohm), mho (mho or seimens), H (henry), and F (farad). Two useful units which are not SI units are: degree (angle), and unitless (no units). An example is: "1.0E-9>T" which converts the units, presumable nT, to Tesla. Another example is: "1.0e+3>m/s" which converts a velocity expressed in kilometers per second to meters per second.

Element CoordinateRepresentation

Namespace	http://impex-fp7.oeaw.ac.at		
Annotations	The method or form for specifying a given point or vector in a given coordinate system.		
Diagram			
Type	enumCoordinateRepresentation		
Properties	content:	simple	
Facets	enumeration	Cartesian	A representation in which a position vector or a measured vector (e.g., field or flow) is specified by its components along the base axes of the coordinate system.
	enumeration	Cylindrical	A coordinate representation of a position vector or measured vector (field or flow) by its k-component, the magnitude of its projection into the i-j plane, and the azimuthal angle of the i-j plane projection.
	enumeration	Spherical	A coordinate representation of a position vector or of a measured vector by its magnitude and two direction angles. The angles are relative to the base axes of the coordinate system used. Typically the angles are phi [azimuth angle, =arctan (j/i)] and theta, where theta may be a polar angle, arctan {[SQRT(i^2+j^2)]/k}, or an elevation angle, arctan [k/SQRT (i^2+j^2)].
Used by	Complex Type	CoordinateSystem	

Source	`<xsd:element name="CoordinateRepresentation" type="enumCoordinateRepresentation">`
	`  <xsd:annotation>`

Element CoordinateSystemName

Namespace	http://impex-fp7.oeaw.ac.at

Annotations	Identifies the coordinate system in which the position, direction or observation has been expressed.		
Diagram			
Type	enumCoordinateSystemName		
Properties	content:	simple	
Facets	enumeration	CGM	Corrected Geomagnetic - A coordinate system from a spatial point with GEO radial distance and geomagnetic latitude and longitude, follow the epoch-appropriate IGRF/DGRF model field vector through to the point where the field line crosses the geomagnetic dipole equatorial plane. Then trace the dipole magnetic field vector Earthward from that point on the equatorial plane, in the same hemisphere as the original point, until the initial radial distance is reached. Designate the dipole latitude and longitude at that point as the CGM latitude and longitude of the original point. See <http://nssdc.gsfc.nasa.gov/space/cgm/cgmm_des.html>
	enumeration	Carrington	A coordinate system which is centered at the Sun and is "fixed" with respect to the synodic rotation rate; the mean synodic value is about 27.2753 days. The Astronomical Almanac gives a value for Carrington longitude of 349.03 degrees at 0000 UT on 1 January 1995.
	enumeration	CSO	A generic body-Centered Solar Orbital (CSO) frame related to comets and asteroids. The frame is defined as a two-vector style dynamic frame as follows: The position of the sun relative to the body is the primary vector: the X axis points from the body to the sun. The inertially referenced velocity of the sun relative to the body is the secondary vector: the Y axis is the component of this velocity vector orthogonal to the X axis. The Z axis is X cross Y, completing the right-handed reference frame. All vectors are geometric: no aberration corrections are used.
	enumeration	DM	Dipole Meridian - A coordinate system centered at the observation point. Z axis is parallel to the Earth's dipole axis, positive northward. X is in the plane defined by Z and the line linking the observation point with the Earth's center. Y is positive eastward. See <http://cdpp.cnes.fr/00428.pdf>
	enumeration	GEI	Geocentric Equatorial Inertial - A coordinate system where the Z axis is along Earth's spin vector, positive northward. X axis points towards the first point of Aries (from the Earth towards the Sun at the vernal equinox). See Russell, 1971
	enumeration	GEO	Geographic - geocentric corotating - A coordinate system where the Z axis is along Earth's spin vector, positive northward. X axis lies in Greenwich meridian, positive towards Greenwich. See Russell, 1971.
	enumeration	GPHIO	In this Cartesian coordinate system, X is along the flow direction, Y is along the Ganymede–Jupiter vector, and Z is along the spin axis. These coordinates are analogous to the earth-centered GSE coordinates that relate to the direction of flow of the solar wind onto Earth’s environment.

enumeration	GSE	Geocentric Solar Ecliptic - A coordinate system where the X axis is from Earth to Sun. Z axis is normal to the ecliptic, positive northward. See Russell, 1971.
enumeration	GSEQ	Geocentric Solar Equatorial - A coordinate system where the X axis is from Earth to Sun. Y axis is parallel to solar equatorial plane. Z axis is positive northward. See Russell, 1971
enumeration	GSM	Geocentric Solar Magnetospheric - A coordinate system where the X axis is from Earth to Sun, Z axis is northward in a plane containing the X axis and the geomagnetic dipole axis. See Russell, 1971
enumeration	HAE	Heliocentric Aries Ecliptic - A coordinate system where the Z axis is normal to the ecliptic plane, positive northward. X axis is positive towards the first point of Aries (from Earth to Sun at vernal equinox). Same as SE below. See Hapgood, 1992.
enumeration	HCC	Heliocentric Cartesian - A 3-D orthonormal coordinate system that is primarily intended to specify with two dimensions a point on the solar disk. The Z axis points toward the observer. The Y axis lies in the plane defined by the solar spin vector and the Z axis, positive northward. The X axis is perpendicular to the Y and Z axes, positive toward solar west. Standard representation for this system is via the point's x and y values, expressed either as physical distances or as fractions of the solar disk radius.
enumeration	HCI	Heliographic Carrington Inertial.
enumeration	HCR	Heliocentric Radial - A 3-D orthonormal coordinate system that is primarily intended to specify with two dimensions a point on the solar disk. The Z axis points toward the observer. The Y axis lies in the plane defined by the solar spin vector and the Z axis, positive northward. The X axis is perpendicular to the Y and Z axes, positive toward solar west. Standard representation for this system is via the point's distance rho from the Z axis [Rho = SQRT(x**2 + y**2)] and its phase angle psi measured counterclockwise from the +Y axis [psi = arctan (-y/x)]
enumeration	HEE	Heliocentric Earth Ecliptic - A coordinate system where the Z axis is normal to the ecliptic plane, positive northward. X axis points from Sun to Earth. See Hapgood, 1992
enumeration	HEEQ	Heliocentric Earth Equatorial - A coordinate system where the Z axis is normal to the solar equatorial plane, positive northward. X axis is generally Earthward in the plane defined by the Z axis and the Sun-Earth direction. See Hapgood, 1992.
enumeration	HG	Heliographic - A heliocentric rotating coordinate system where the Z axis is normal to the solar equatorial plane, positive northward. X, Y axes rotate with a 25.38 day period. The zero longitude (X axis) is defined as the longitude that passed through the ascending node of the solar equator on the ecliptic plane on 1 January, 1854 at 12 UT. See <http://nssdc.gsfc.nasa.gov/space/helios/coor_des.html>
enumeration	HGI	Heliographic Inertial - A heliocentric coordinate system where the Z axis is normal to the solar equatorial plane, positive northward. X axis is along the intersection line between solar equatorial and ecliptic planes. The X axis was positive at SE longitude of 74.367 deg on Jan 1, 1900. (See SE below.) See <http://nssdc.gsfc.nasa.gov/space/helios/coor_des.html>
enumeration	HPC	Helioprojective Cartesian = A 3-D orthonormal (left-handed) coordinate system that is primarily

		intended to specify with two dimensions a point on the solar disk. The Z axis points from the observer to the center of the solar disk. The Y axis lies in the plane defined by the solar spin vector and the Z axis, positive northward. The X axis is perpendicular to the Y and Z axes, positive toward solar west. Given as the distance between the observer and the center of the solar disk, the standard representation of an (x,y) point on the solar disk is via the point's longitude angle [arctan (x/d)] and latitude angle [arctan y/d].
enumeration	HPR	Helioprojective Radial - A 3-D orthonormal (left-handed) coordinate system that is primarily intended to specify with two dimensions a point on the solar disk. The Z axis points from the observer to the center of the solar disk. The Y axis lies in the plane defined by the solar spin vector and the Z axis, positive northward. The X axis is perpendicular to the Y and Z axes, positive toward solar west. Given as the distance between the observer and the center of the solar disk, the standard representation for this system of an (x,y) point on the solar disk is via the point's latitude angle theta {= arctan [SQRT(x**2 + y**2)]/d]} or equivalent declination parameter delta (= theta - 90 deg), and its phase angle psi as measured counter- clockwise from the +Y axis [psi = arctan (-y/x)].
enumeration	HSM	TBD
enumeration	J2000	An astronomical coordinate system which uses the mean equator and equinox of Julian date 2451545.0 TT (Terrestrial Time), or January 1, 2000, noon TT. (aka J2000) to define a celestial reference frame.
enumeration	JSM	Jovian Solar Magnetospheric - A coordinate system where the X axis is from Jupiter to Sun, Z axis is northward in a plane containing the X axis and the Jovian dipole axis.
enumeration	JSO	Coordinate Sytem Related to Jupiter Jovian Solar Orbital (X anti-sunward, Y along the orbital velocity direction)
enumeration	KSM	Kronian Solar Magnetospheric - A coordinate system where the X axis is from Saturn to Sun, Z axis is northward in a plane containing the X axis and the Kronian dipole axis.
enumeration	KSO	Coordinate Sytem Related to Saturn Kronian Solar Orbital (X anti-sunward, Y along the orbital velocity direction)
enumeration	LGM	Local Geomagnetic - A coordinate system used mainly for Earth surface or near Earth surface magnetic field data. X axis northward from observation point in a geographic meridian. Z axis downward towards Earth's center. In this system, H (total horizontal component) = SQRT (Bx^2 + By^2) and D (declination angle) = arctan (By/Bx)
enumeration	MAG	Geomagnetic - geocentric. Z axis is parallel to the geomagnetic dipole axis, positive north. X is in the plane defined by the Z axis and the Earth's rotation axis. If N is a unit vector from the Earth's center to the north geographic pole, the signs of the X and Y axes are given by Y = N x Z, X = Y x Z.. See Russell, 1971, and <http://cdpp.cnes.fr/00428.pdf>
enumeration	MFA	Magnetic Field Aligned - A coordinate system spacecraft-centered system with Z in the direction of the ambient magnetic field vector. X is in the plane defined by Z and the spacecraft-Sun line, positive sunward. See <http://cdpp.cnes.fr/00428.pdf>
enumeration	MSO	Mars or Mercury Solar Orbital coordinate system. The X axis points from the center of the planet to the Sun;

		the Z axis is perpendicular to the orbital plane of the planet and parallel to the angular momentum vector. The Y axis completes the right-handed coordinate system.
enumeration	RTN	Radial Tangential Normal. Typically centered at a spacecraft. Used for IMF and plasma V vectors. R (radial) axis is radially away from the Sun, T (tangential) axis is normal to the plane formed by R and the Sun's spin vector, positive in the direction of planetary motion. N (normal) is R x T.
enumeration	SC	Spacecraft - A coordinate system defined by the spacecraft geometry and/or spin. Often has Z axis parallel to spacecraft spin vector. X and Y axes may or may not corotate with the spacecraft. See SR and SR2 below.
enumeration	SE	Solar Ecliptic - A heliocentric coordinate system where the Z axis is normal to the ecliptic plane, positive northward. X axis is positive towards the first point of Aries (from Earth to Sun at vernal equinox). Same as HAE above. See <http://nssdc.gsfc.nasa.gov/space/helios/coor_des.html>
enumeration	SM	Solar Magnetic - A geocentric coordinate system where the Z axis is northward along Earth's dipole axis, X axis is in plane of z axis and Earth-Sun line, positive sunward. See Russell, 1971.
enumeration	SR	Spin Reference - A special case of a Spacecraft (SC) coordinate system for a spinning spacecraft. Z is parallel to the spacecraft spin vector. X and Y rotate with the spacecraft. See <http://cdpp.cnes.fr/00428.pdf>
enumeration	SR2	Spin Reference 2 - A special case of a Spacecraft (SC) coordinate system for a spinning spacecraft. Z is parallel to the spacecraft spin vector. X is in the plane defined by Z and the spacecraft-Sun line, positive sunward. See <http://cdpp.cnes.fr/00428.pdf>
enumeration	SSE	Spacecraft Solar Ecliptic - A coordinate system used for deep space spacecraft, for example Helios. - X axis from spacecraft to Sun. Z axis normal to ecliptic plane, positive northward. Note: Angle between normals to ecliptic and to Helios orbit plane ~ 0.25 deg.
enumeration	SSE_L	Selenocentric Solar Ecliptic. The X axis points from the center of the Earth's moon to the sun, the Z axis is normal to the ecliptic plane, positive northward. And the Y axis completes the right-handed set of axes.
enumeration	SpacecraftOrbitPlane	A coordinate system where X lies in the plane normal to and in the direction of motion of the spacecraft, Z is normal to this plane and Y completes the triad in a right-handed coordinate system.
enumeration	TIIS	In this Cartesian coordinate system, X is along the flow direction, Y is along the Titan–Saturn vector, and Z is along the spin axis. These coordinates are analogous to the earth-centered GSE coordinates that relate to the direction of flow of the solar wind onto Earth’s environment.
enumeration	VSO	Venus Solar Orbital coordinate system. The X axis points from the center of the planet to the Sun; The Z axis is perpendicular to the orbital plane of the planet and parallel to the angular momentum vector. The Y axis completes the right-handed coordinate system.
enumeration	WGS84	The World Geodetic System (WGS) defines a

	reference frame for the earth, for use in geodesy and navigation. The WGS84 uses the zero meridian as defined by the Bureau International de l'Heure.

Element DisplayType

Namespace	http://impex-fp7.oeaw.ac.at		
Annotations	The general styling or type of plot that is suitable for the variable.		
Diagram			
Type	enumDisplayType		
Properties	content:	simple	
Facets	enumeration	Image	A two-dimensional representation of data with values at each element of the array related to an intensity or a color.
	enumeration	Plasmagram	The characterization of signal strengths in active sounding measurements as a function of virtual range or signal delay time and sounding frequency. A Plasmagram is also referred to as an Ionogram.
	enumeration	Spectrogram	The characterization of signal strengths as a function of frequency (or energy) and time.
	enumeration	StackPlot	A representation of data showing multiple sets of observations on a single plot, possibly offsetting each plot by some uniform amount.
	enumeration	TimeSeries	A representation of data showing a set of observations taken at different points in time and charted as a time series.
	enumeration	WaveForm	Spatial or temporal variations of wave amplitude over wave-period timescales.
Used by	Complex Type	RenderingHints	
Source	<xsd:element name="DisplayType" type="enumDisplayType"> <xsd:annotation> <xsd:documentation xml:lang="en">The general styling or type of plot that is suitable for the variable.</xsd:documentation> </xsd:annotation> </xsd:element>		

Element AxisLabel

Namespace	http://impex-fp7.oeaw.ac.at	
Annotations	A short character string (approximately 10 characters, but preferably 6 characters - more only if absolutely required for clarity) which can be used to label a y-axis for a plot or to provide a heading for a data listing.	
Diagram		
Type	xsd:string

Element Index

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	The location of an item in an array or vector. An index can be multivalued to represent the location in a multidimensional object. The index of the first item is "1". A value of "0" is a wild card for all elements at the location in an array. A value of "-1" is a reference to the dimension at the location in the array. A "-1" is used when describing the attributes of the dimension, where as "0" or a positive integer is used to describe attributes of individual elements.

Element `ScaleMin`

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	The minimum value that the variable is expected to attain. Used, for example, by automated plotting software.
Diagram	Type	xsd:double
Properties	content: simple
Used by	Complex Type RenderingHints
Source	<xsd:element name="ScaleMin" type="xsd:double"> <xsd:annotation> <xsd:documentation xml:lang="en">The minimum value that the variable is expected to attain. Used, for example, by automated plotting software.</xsd:documentation> </xsd:annotation> </xsd:element>

Element `ScaleMax`

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	The maximum value that the variable is expected to attain. Used, for example, by automated plotting software.
Diagram	
Type	xsd:double
Properties	content: simple
Used by	Complex Type RenderingHints
Source	<xsd:element name="ScaleMax" type="xsd:double"> <xsd:annotation> <xsd:documentation xml:lang="en">The maximum value that the variable is expected to attain. Used, for example, by automated plotting software.</xsd:documentation> </xsd:annotation> </xsd:element>

Element ScaleType

Namespace	http://impex-fp7.oeaw.ac.at		
Annotations	The scaling to apply to an axis. If this attribute is not present, linear scale should be assumed.		
Diagram			
Type	enumScaleType		
Properties	content: simple		
Facets	enumeration	LinearScale	Intervals which are equally spaced.
	enumeration	LogScale	Intervals which are spaced proportionally to the logarithms of the values being represented.
Used by	Complex Type RenderingHints		
Source	<xsd:element name="ScaleType" type="enumScaleType"> <xsd:annotation> <xsd:documentation xml:lang="en">The scaling to apply to an axis. If this attribute is not present, linear scale should be assumed.</xsd:documentation> </xsd:annotation> </xsd:element>

Element Size

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	The number of elements in each dimension of a multi-dimensional array. A scalar has a size of 1. A multi-dimensional vector will have a size for each dimension. Note that the number of elements in the size of an N-dimensional array conveys the array's dimensionality while the product of those numbers conveys the total number of elements in the array. When size is used to describe a tensor it is the number of elements in the tensor. As such it has a limited set of values. A tensor of rank 1 has a size of 3, rank 2 a size of 9, rank 3 a size of 27 and rank n a size of 3^n.
Diagram	Type	typeSequence

Element `Qualifier`

Namespace	http://impex-fp7.oeaw.ac.at		
Annotations	Characterizes the refinement to apply to a type or attribute of a quantity.		
Diagram			
Type	enumQualifier		
Properties	content:	simple	
Facets	enumeration	Anisotropy	Direction-dependent property.
	enumeration	Array	A sequence of values corresponding to the elements in a rectilinear, n-dimension matrix. Each value can be referenced by a unique index.
	enumeration	Average	The statistical mean; the sum of a set of values divided by the number of values in the set.
	enumeration	Characteristic	A quantity which can be easily identified and measured in a given environment.
	enumeration	Circular	Relative to polarization, right-hand circularly polarized light is defined such that the electric field is rotating clockwise as seen by an observer towards whom the wave is moving. Left-hand circularly polarized light is defined such that the electric field is rotating counterclockwise as seen by an observer towards whom the wave is moving. The polarization of magnetohydrodynamic waves is specified with respect to the ambient mean magnetic field : right-hand polarized waves have a transverse electric field component which turns in a right-handed sense (that of the gyrating electrons) around the magnetic field.
	enumeration	Column	A two-dimensional measure of a quantity. The column is the area over which the quantity is measured.
	enumeration	Component	Projection of a vector along one of the base axes of a coordinate system.
	enumeration	Component.I	Projection of a vector along the first named axis of a coordinate system. Typically the X axis, but could be the R axis for an RTN coordinate system.
	enumeration	Component.J	Projection of a vector along the second named axis of a coordinate system. Typically the Y axis, but could be the T axis for an RTN coordinate system.
	enumeration	Component.K	Projection of a vector along the third named axis of a coordinate system. Typically the Z axis, but could be the N axis for an RTN coordinate system.
	enumeration	Core	The central or main part of an object or calculated distribution. For example, the part of a distribution of particles at low energies that is a thermal (Maxwellian) population.
	enumeration	CrossSpectrum	The Fourier transform of the cross correlation of two physical or empirical observations.
	enumeration	Deviation	The difference between an observed value and the expected value of a quantity.
	enumeration	Differential	A measurement within a narrow range of energy and/or solid angle.
	enumeration	Direction	The spatial relation between an object and another object, the orientation of the object or the course along which the object points

		or moves.
enumeration	DirectionAngle	The angle between a position vector or measured vector (or one of its projections onto a plane) and one of the base axes of the coordinate system.
enumeration	DirectionAngle.AzimuthAngle	The angle between the projection into the i-j plane of a position or measured vector and the i-axis of the coordinate system. Mathematically defined as arctan(j/i).
enumeration	DirectionAngle.ElevationAngle	The angle between the position or measured vector and the i-j plane of the coordinate system. Mathematically defined as arctan(k/SQRT(i^2+j^2)).
enumeration	DirectionAngle.PolarAngle	The angle between the position or measured vector and the k-axis of the coordinate system. Mathematically defined as arctan([SQRT(i^2+j^2)]/k).
enumeration	Directional	A measurement within a narrow range of solid angle.
enumeration	FieldAligned	The component of a quantity which is oriented in the same direction of a field.
enumeration	Fit	Values that make an model agree with the data.
enumeration	Group	An assemblage of values that a certain relation or common characteristic.
enumeration	Halo	The part of an object or distribution surrounding some central body or distribution. For example, the particles above the core energies that show enhancements above the thermal population. Typically, a "power law tail" shows a break from the core Maxwellian at a particular energy.
enumeration	Integral	A flux measurement in a broad range of energy and solid angle.
enumeration	Integral.Area	Integration over the extent of a planar region, or of the surface of a solid.
enumeration	Integral.Bandwidth	Integration over the width a frequency band.
enumeration	Integral.SolidAngle	Integration over the angle in three-dimensional space that an object subtends at a point.
enumeration	LineOfSight	The line of sight is the line that connects the observer with the observed object. This expression is often used with measurements of Doppler velocity and magnetic field in magnetograms, where only the component of the vector field directed along the line of sight is measured.
enumeration	Linear	Polarization where the E-field vector is confined to a given plane
enumeration	Magnitude	A measure of the strength of a vector quantity or length of its representational vector.
enumeration	Maximum	The largest value of a batch or sample or the upper bound of a probability distribution.
enumeration	Median	The measure of central tendency of a set of n. values computed by ordering the values and taking the value at position (n. + 1) / 2 when n. is odd or the arithmetic mean of the values at positions n. / 2 and (n. / 2) + 1 when n. is even.
enumeration	Minimum	The smallest value of a batch or sample or the lower bound of a probability distribution.
enumeration	Moment	Parameters determined by integration over a distribution function convolved with a power of velocity.
enumeration	Parallel	Having the same direction as a given direction
enumeration	Peak	The maximum value for the quantity in question, over a period of time which is usually equal to the cadence.
enumeration	Perpendicular	At right angles to a given direction.
enumeration	Perturbation	Variations in the state of a system.

	enumeration	Phase	A point or portion in a recurring series of changes.
	enumeration	PhaseAngle	Phase difference between two or more waves, normally expressed in degrees.
	enumeration	Projection	A measure of the length of a position or measured vector as projected into a plane of the coordinate system.
	enumeration	Projection.IJ	A measure of the length of a position or measured vector projected into the i-j (typically X-Y) plane of the coordinate system.
	enumeration	Projection.IK	A measure of the length of a position or measured vector projected into the i-k (typically X-Z) plane of the coordinate system.
	enumeration	Projection.JK	A measure of the length of a position or measured vector projected into the j-k (typically Y-Z) plane of the coordinate system.
	enumeration	Pseudo	Similar to or having the appearance of something else. Can be used to indicate an estimation or approximation of a particular quantity.
	enumeration	Ratio	The relative magnitudes of two quantities.
	enumeration	Scalar	A quantity that is completely specified by its magnitude and has no direction.
	enumeration	Spectral	Characterized as a range or continuum of frequencies
	enumeration	StandardDeviation	The square root of the average of the squares of deviations about the mean of a set of data. Standard deviation is a statistical measure of spread or variability.
	enumeration	StokesParameters	A set of four parameters (usually called I,Q, U and V) which describe the polarization state of an electromagnetic wave propagating through space.
	enumeration	Strahl	A distribution of particles concentrated in a narrow energy band. The band may be may be aligned with a secondary feature. For example, it may occur in a narrow cone aligned with the mean magnetic field direction.
	enumeration	Superhalo	The part of an object or distribution surrounding some central body or distribution evident in a second break in the distribution function (e.g., a different power law). It consists of a population at a higher energies than for a halo.
	enumeration	Symmetric	Equal distribution about one or more axes.
	enumeration	Tensor	A generalized linear "quantity" or "geometrical entity" that can be expressed as a multi-dimensional array relative to a choice of basis of the particular space on which it is defined.
	enumeration	Total	The summation of quantities over all possible species.
	enumeration	Trace	The sum of the elements on the main diagonal (the diagonal from the upper left to the lower right) of a square matrix.
	enumeration	Uncertainty	A statistically defined discrepancy between a measured quantity and the true value of that quantity that cannot be corrected by calculation or calibration.
	enumeration	Variance	A measure of dispersion of a set of data points around their mean value. The expectation value of the squared deviations from the mean.
	enumeration	Vector	A set of parameter values each along some independent variable (e.g., components of a field in three orthogonal spatial directions; atmospheric temperature values at several altitudes, or at a given latitude and longitude;).
Used by	Complex Types	Element, Field, InputField, InputParameter, InputPopulation, Mixed, Particle, Property, Support, Wave

Annotations	The physical attribute of the field.		
Diagram			
Type	enumFieldQuantity		
Properties	content:	simple	
Facets	enumeration	Current	The flow of electrons through a conductor caused by a potential difference.
	enumeration	Electric	The physical attribute that exerts an electrical force.
	enumeration	Electromagnetic	Electric and magnetic field variations in time and space that propagate through a medium or a vacuum with the wave's propagation, electric field, and magnetic field vectors forming an orthogonal triad. Waves in this category are detected by having their field quantities measured.
	enumeration	Gyrofrequency	The number of gyrations around a magnetic guiding center (field line) a charged particle makes per unit time due to the Lorentz force.
	enumeration	Magnetic	The physical attribute attributed to a magnet or its equivalent.
	enumeration	PlasmaFrequency	A number-density-dependent characteristic frequency of a plasma.
	enumeration	Potential	A field which obeys Laplace's Equation.
	enumeration	PoyntingFlux	Electromagnetic energy flux transported by a wave characterized as the rate of energy transport per unit area per steradian.

Element SpectralRange

Namespace	http://impex-fp7.oeaw.ac.at		
Annotations	The general term used to describe wavelengths or frequencies within a given span of values for those quantities.		
Diagram			
Type	enumSpectralRange		
Properties	content:	simple	
Facets	enumeration	CaK	A spectrum with a wavelength of range centered near 393.5 nm. VSO nickname: Ca-K image with range of 391.9 nm to 395.2 nm.
	enumeration	ExtremeUltraviolet	A spectrum with a wavelength range of 10.0 nm to 125.0nm. VSO nickname: EUV image with a range of of 10.0 nm to 125.0 nm
	enumeration	FarUltraviolet	A spectrum with a wavelength range of 122 nm to 200.0nm. VSO nickname: FUV image with a range of 122.0 nm to 200 nm
	enumeration	GammaRays	Photons with a wavelength range: 0.00001 to 0.001 nm
	enumeration	Halpha	A spectrum with a wavelength range centered at 656.3 nm. VSO nickname: H-alpha image with a spectrum range of of 655.8 nm to 656.8 nm.
	enumeration	HardXrays	Photons with a wavelength range: 0.001 to 0.1 nm and an energy range of 12 keV to 120 keV
	enumeration	He10830	A spectrum with a wavelength range centered at 1082.9 nm. VSO nickname: He 10830 image with a range of 1082.5 nm to 1083.3 nm.
	enumeration	He304	A spectrum centered around the resonance line of ionised helium at 304 Angstrom (30.4 nm).
	enumeration	Infrared	Photons with a wavelength range: 760 to 1.00x10^6 nm
	enumeration	K7699	A spectrum with a wavelength range centred at 769.9 nm. VSO nickname: K-7699 dopplergram with a range of 769.8 nm to 770.0 nm.
	enumeration	LBHBand	Lyman-Birge-Hopfield band in the far ultraviolet range with wavelength range of 140nm to 170 nm.
	enumeration	Microwave	Photons with a wavelength range: 1.00x10^6 to 1.50x10^7 nm
	enumeration	NaD	A spectrum with a wavelength range of centered at 589.3 nm. VSO nickname: Na-D image with a range of 588.8 nm to 589.8 nm.
	enumeration	Ni6768	A spectrum with a wavelength range centered at 676.8 nm. VSO nickname: Ni-6768 dopplergram with a range of of 676.7 nm to 676.9 nm.

	enumeration	Optical	Photons with a wavelength range: 380 to 760 nm
	enumeration	RadioFrequency	Photons with a wavelength range: 100,000 to 1.00x10^11 nm
	enumeration	SoftXRays	X-Rays with an energy range of 0.12 keV to 12 keV.
	enumeration	Ultraviolet	Photons with a wavelength range: 10 to 400 nm.
	enumeration	WhiteLight	Photons with a wavelength in the visible range for humans.
	enumeration	XRays	Photons with a wavelength range: 0.001 <= x < 10 nm

Element WaveQuantity

Namespace	http://impex-fp7.oeaw.ac.at		
Annotations	A characterization of the physical properties of a wave.		
Diagram			
Type	enumWaveQuantity		
Properties	content:	simple	
Facets	enumeration	ACElectricField	Alternating electric field component of a wave.
	enumeration	ACMagneticField	Alternating magnetic field component of a wave.
	enumeration	Absorption	Decrease of radiant energy (relative to the background continuum spectrum).
	enumeration	Albedo	The ratio of reflected radiation from the surface to incident radiation upon it.
	enumeration	DopplerFrequency	Change in the frequency of a propagating wave due to motion of the source, the observer, the reflector, or the propagation medium.
	enumeration	Emissivity	The energy emitted spontaneously per unit bandwidth (typically frequency) per unit time per unit mass of source. Emissivity is usually integrated over all directions/solid angles.
	enumeration	EnergyFlux	The amount of energy passing through a unit area in a unit time.
	enumeration	EquivalentWidth	The spectral width of a total absorption line having the amount of absorbed radiant energy being equivalent to that in an observed absorption line.
	enumeration	Frequency	The number of occurrences of a repeating event per unit time.
	enumeration	Gyrofrequency	The number of gyrations around a magnetic guiding center (field line) a charged particle makes per unit time due to the Lorentz force.
	enumeration	Intensity	The measurement of radiant or wave energy per unit detector area per unit bandwidth per unit solid angle per unit time.

	enumeration	LineDepth	The measure of the amount of absorption below the continuum (depth) in a particular wavelength or frequency in an absorption spectrum.
	enumeration	MagneticField	A region of space near a magnetized body where magnetic forces can be detected (as measured by methods such as Zeeman splitting, etc.).
	enumeration	ModeAmplitude	In helioseismology the magnitude of oscillation of waves of a particular geometry.
	enumeration	PlasmaFrequency	A number-density-dependent characteristic frequency of a plasma.
	enumeration	Polarization	Direction of the electric vector of an electromagnetic wave. The wave can be linearly polarized in any direction perpendicular to the direction of travel, circularly polarized (clockwise or counterclockwise), unpolarized, or mixtures of the above.
	enumeration	PoyntingFlux	Electromagnetic energy flux transported by a wave characterized as the rate of energy transport per unit area per steradian.
	enumeration	PropagationTime	Time difference between transmission and reception of a wave in an active wave experiment.
	enumeration	StokesParameters	A set of four parameters (usually called I,Q, U and V) which describe the polarization state of an electromagnetic wave propagating through space.
	enumeration	Velocity	Rate of change of position. Also used for the average velocity of a collection of particles, also referred to as "bulk velocity".
	enumeration	Wavelength	The peak-to-peak distance over one wave period.
Used by	Complex Type	Wave

Element MixedQuantity

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	A characterization of the combined attributes of a quantity.
Diagram	Type	enumMixedQuantity

Properties	content:	simple	
Facets	enumeration	AkasofuEpsilon	A measure of the magnetopause energy flux and an indicator of the solar wind power available for subsequent magnetospheric energization. Defined as: V*B^2*l^2sin(theta/2)^4 where B is the IMF, l is an empirical scaling parameter equal to 7 RE, and theta = tan(BY /BZ)^-1 the IMF clock angle.
	enumeration	AlfvenMachNumber	The ratio of the bulk flow speed to the Alfven speed.
	enumeration	AlfvenVelocity	Phase velocity of the Alfven wave; In SI units it is the velocity of the magnetic field divided by the square root of the mass density times the permeability of free space (mu).
	enumeration	FrequencyToGyrofrequencyRatio	The ratio of the characteristic frequency of a medium to gyrofrequency of a particle.
	enumeration	MagnetosonicMachNumber	The ratio of the velocity of fast mode waves to the Alfven velocity.
	enumeration	Other	Not classified with more specific terms. The context of its usage may be described in related text.
	enumeration	PlasmaBeta	The ratio of the plasma pressure (nkT) to the magnetic pressure (B^2/2mu0) of the SUM(nkT)/(B^2/2mu0).
	enumeration	TotalPressure	In an MHD fluid it is the number density (N) times Boltzmann constant times the temperature in Kelvin.
	enumeration	VCrossB	The cross product of the charge velocity (V) and the magnetic field (B). It is the electric field exerted on a point charge by a magnetic field.
Used by	Complex Type	Mixed

Element ParticleType

Namespace	http://impex-fp7.oeaw.ac.at		
Annotations	A characterization of the kind of particle observed by the measurement.		
Diagram			
Type	enumParticleType		
Properties	content:	simple	
Facets	enumeration	Aerosol	A suspension of fine solid or liquid particles in a gas.
	enumeration	AlphaParticle	A positively charged nuclear particle that consists of two protons and two neutrons.
	enumeration	Atom	Matter consisting of a nucleus surrounded by electrons which has no net charge.
	enumeration	Dust	Free microscopic particles of solid material.
	enumeration	Electron	An elementary particle consisting of a charge of negative electricity equal to about 1.602 x 10^(-19) Coulomb and having a mass when at rest of about 9.109534 x 10^(-28) gram.
	enumeration	Ion	An atom that has acquired a net electric charge by gaining or losing one or more electrons.(Note: Z>2)

	enumeration	Molecule	A group of atoms so united and combined by chemical affinity that they form a complete, integrated whole, being the smallest portion of any particular compound that can exist in a free state
	enumeration	Neutron	An elementary particle that has no net charge and is a constituent of atomic nuclei, and that has a mass slightly large than a proton (1.673 x 10^(-24) gram.)
	enumeration	Proton	An elementary particle that is a constituent of all atomic nuclei, that carries a positive charge numerically equal to the charge of an electron, and that has a mass of 1.673 x 10^(-24) gram.
Used by	Complex Types	InputPopulation, Mixed, Particle

Element MeasurementType

Namespace	http://impex-fp7.oeaw.ac.at		
Annotations	A characterization of the quantitative assessment of a phenomenon.		
Diagram			
Type	enumMeasurementType		
Properties	content:	simple	
Facets	enumeration	ActivityIndex	An indication, derived from one or more measurements, of the level of activity of an object or region, such as sunspot number, F10.7 flux, Dst, or the Polar Cap Indices.
	enumeration	Dopplergram	A map or image depicting the spatial distribution of line-of-sight velocities of the observed object.
	enumeration	Dust	Free microscopic particles of solid material.
	enumeration	ElectricField	A region of space around a charged particle, or between two voltages within which a force is exerted on charged objects in its vicinity. An electric field is the electric force per unit charge.
	enumeration	EnergeticParticles	Pieces of matter that are moving very fast. Energetic particles include protons, electrons, neutrons, neutrinos, the nuclei of atoms, and other sub-atomic particles.
	enumeration	Ephemeris	The spatial coordinates of a body as a function of time. When used as an Instrument Type it represents the process or methods used to generate spatial coordinates.
	enumeration	ImageIntensity	Measurements of the two-dimensional distribution of the intensity of photons from some region or object such as the Sun or the polar auroral regions; can be in any wavelength band, and polarized, etc.
	enumeration	InstrumentStatus	A quantity directly related to the operation or function of an instrument.
	enumeration	IonComposition	In situ measurements of the relative flux or density of electrically charged particles in the space environment. May give simple fluxes, but full distribution functions are sometimes measured.
	enumeration	Irradiance	Irradiance - A radiometric term for the power of electromagnetic radiation at a surface, per unit area. "Irradiance" is used when the

			electromagnetic radiation is incident on the surface. Irradiance data may be reported in any units (i.e. counts/s) due to, for example, being at a particular wavelength, or to being a not-fully-calibrated relative measurement.
	enumeration	MagneticField	A region of space near a magnetized body where magnetic forces can be detected (as measured by methods such as Zeeman splitting, etc.).
	enumeration	Magnetogram	Measurements of the vector or line-of-sight magnetic field determined from remote sensing measurements of the detailed structure of spectral lines, including their splitting and polarization. ("Magnetogram.")
	enumeration	NeutralAtomImages	Measurements of neutral atom fluxes as a function of look direction; often related to remote energetic charged particles that lose their charge through charge-exchange and then reach the detector on a line-of-sight trajectory.
	enumeration	NeutralGas	Measurements of neutral atomic and molecular components of a gas.
	enumeration	Profile	Measurements of a quantity as a function of height above an object such as the limb of a body.
	enumeration	Radiance	A radiometric measurement that describes the amount of electromagnetic radiation that passes through or is emitted from a particular area, and falls within a given solid angle in a specified direction. They are used to characterize both emission from diffuse sources and reflection from diffuse surfaces.
	enumeration	Spectrum	The distribution of a characteristic of a physical system or phenomenon, such as the energy emitted by a radiant source, arranged in the order of wavelengths.
	enumeration	ThermalPlasma	Measurements of the plasma in the energy regime where the most of the plasma occurs. May be the basic fluxes in the form of distribution functions or the derived bulk parameters (density, flow velocity, etc.).
	enumeration	Waves	Data resulting from observations of wave experiments and natural wave phenomena. Wave experiments are typically active and natural wave phenomena are passive. Examples of wave experiments include coherent/incoherent scatter radars, radio soundings, VLF propagation studies, ionospheric scintillation of beacon satellite signals, etc. Examples of natural wave phenomena include micropulsations, mesospheric gravity waves, auroral/plasmaspheric hiss, Langmuir waves, AKR, Jovian decametric radiation, solar radio bursts, etc.
	enumeration	Waves.Active	Exerting an influence or producing a change or effect. An active measurement is one which produces a transmission or excitation as a part of the measurement cycle.
	enumeration	Waves.Passive	Movement or effect produced by outside influence. A passive measurement is one which does not produce a transmission or excitation as a part of the measurement cycle.

Element ObservedRegion

Namespace	http://impex-fp7.oeaw.ac.at		
Annotations	The portion of space measured by the instrument at the time of an observation. A region is distinguished by certain natural features or physical characteristics. It is the location of the observatory for in situ data, the location or region sensed by remote sensing observatories and the location-of-relevance for parameters that are derived from observational data.		
Diagram			
Type	enumRegion		
Properties	content:	simple	
Facets	enumeration	Asteroid	A small extraterrestrial body consisting mostly of rock and metal that is in orbit around the sun.
	enumeration	Callisto	A moon of the planet Jupiter, the second largest after Ganymede and the third-largest in the solar system
	enumeration	Comet	A relatively small extraterrestrial body consisting of a frozen mass that travels around the sun in a highly elliptical orbit.
	enumeration	Earth	The third planet from the sun in our solar system.
	enumeration	Earth.Magnetosheath	The region between the bow shock and the magnetopause, characterized by very turbulent plasma.
	enumeration	Earth.Magnetosphere	The region of space above the atmosphere or surface of the planet, and bounded by the magnetopause, that is under the direct influence of the planet's magnetic field.
	enumeration	Earth.Magnetosphere.Magnetotail	The region on the night side of the body where the magnetic filed is stretched backwards by the force of the solar wind. For Earth, the magnetotail begins at a night-side radial distance of 10 Re (X > -10Re).
	enumeration	Earth.Magnetosphere.Main	The region of the magnetosphere where the magnetic field lines are closed, but does not include the gaseous region gravitationally bound to the body.
	enumeration	Earth.Magnetosphere.Polar	The region near the pole of a body. For a magnetosphere the polar region is the area where magnetic field lines are open and includes the auroral zone.
	enumeration	Earth.Magnetosphere.RadiationBelt	The region within a magnetosphere where high-energy particles could potentially be trapped in a magnetic field.
	enumeration	Earth.NearSurface	The gaseous and possibly ionized environment of a body extending from the surface to some specified altitude. For the Earth, this altitude is 2000 km.
	enumeration	Earth.NearSurface.Atmosphere	The neutral gases surrounding a body that extends from the surface and is bound to the body by virtue of the gravitational attraction.
	enumeration	Earth.NearSurface.AuroralRegion	The region in the atmospheric where electrically-charged

		particles bombarding the upper atmosphere of a planet in the presence of a magnetic field produce an optical phenomenon.
enumeration	Earth.NearSurface.EquatorialRegion	A region centered on the equator and limited in latitude by approximately 23 degrees north and south of the equator.
enumeration	Earth.NearSurface.Ionosphere	The charged or ionized gases surrounding a body that are nominally bound to the body by virtue of the gravitational attraction.
enumeration	Earth.NearSurface.Ionosphere.DRegion	The layer of the ionosphere that exists approximately 50 to 95 km above the surface of the Earth. One of several layers in the ionosphere.
enumeration	Earth.NearSurface.Ionosphere.ERegion	A layer of ionised gas occurring at 90-150km above the ground. One of several layers in the ionosphere. Also called the The Kennelly-Heaviside layer.
enumeration	Earth.NearSurface.Ionosphere.FRegion	A layer that contains ionized gases at a height of around 150-800 km above sea level, placing it in the thermosphere. the F region has the highest concentration of free electrons and ions anywhere in the atmosphere. It may be thought of as comprising two layers, the F1-and F2-layers. One of several layers in the ionosphere. Also known as the Appleton layer.
enumeration	Earth.NearSurface.Ionosphere.Topside	The region at the upper most areas of the ionosphere.
enumeration	Earth.NearSurface.Mesosphere	The layer of the atmosphere that extends from the Stratosphere to a range of 80 km to 85 km, temperature decreasing with height.
enumeration	Earth.NearSurface.Plasmasphere	A region of the magnetosphere consisting of low energy (cool) plasma. It is located above the ionosphere. The outer boundary of the plasmasphere is known as the plasmapause, which is defined by an order of magnitude drop in plasma density.
enumeration	Earth.NearSurface.PolarCap	The areas of the globe surrounding the poles and consisting of the region north of 60 degrees north latitude an the region south of 60 degrees south latitude.
enumeration	Earth.NearSurface.SouthAtlanticAnomalyRegion	The region where the Earth's inner van Allen radiation belt makes its closest approach to the planet's surface. The result is that, for a given altitude, the radiation intensity is higher over this region than elsewhere.
enumeration	Earth.NearSurface.Stratosphere	The layer of the atmosphere that extends from the troposphere to about 30 km, temperature increases with height. The stratosphere contains the ozone layer.
enumeration	Earth.NearSurface.Thermosphere	The layer of the atmosphere that extends from the Mesosphere to 640+ km, temperature increasing with height.
enumeration	Earth.NearSurface.Troposphere	The lowest layer of the atmosphere which begins at the surface and extends to between 7 km (4.4 mi) at the poles and 17 km (10.6 mi) at the equator, with some variation due to weather factors.
enumeration	Earth.Surface	The outermost area of a solid object.
enumeration	Enceladus	One of the innermost moons of Saturn.
enumeration	Europa	The sixth-closest moon of the planet Jupiter
enumeration	Ganymede	The biggest moon of Jupiter planet in our solar system.
enumeration	Heliosphere	The solar atmosphere extending roughly from the outer corona to the edge of the solar plasma at the heliopause separating primarily solar plasma from interstellar plasma.
enumeration	Heliosphere.Heliosheath	The region extending radially outward from the heliospheric termination shock and in which the decelerated solar wind plasma is still significant.

enumeration	Heliosphere.Inner	The region of the heliosphere extending radially outward from the solar coronal base to just inside 1 AU.
enumeration	Heliosphere.NearEarth	The heliospheric region near the Earth which extends to and includes the area near the L1 and L2 Lagrange point.
enumeration	Heliosphere.Outer	The region of the heliosphere extending radially outward from just outside 1 AU to the heliospheric termination shock.
enumeration	Heliosphere.Remote1AU	A roughly toroidal region that includes the Earth's orbit, but exclusive of the region near the Earth.
enumeration	Interstellar	The region between stars outside of the star's heliopause.
enumeration	Io	The innermost of the four Galilean moons of the planet Jupiter
enumeration	Jupiter	The fifth planet from the sun in our solar system.
enumeration	Jupiter.Magnetosphere	The magnetosphere of the fifth planet from the sun in our solar system.
enumeration	Mars	The forth planet from the sun in our solar system.
enumeration	Mercury	The first planet from the sun in our solar system.
enumeration	Mercury.Magnetosphere	The magnetosphere of the first planet from the sun in our solar system.
enumeration	Neptune	The seventh planet from the sun in our solar system.
enumeration	Planet	There are eigth planets in the solar system.
enumeration	Planet.Magnetosphere	The magnetosphere of one of the planets in the solar system.
enumeration	Pluto	The ninth (sub)planet from the sun in our solar system.
enumeration	Rhea	The second-largest moon of Saturn and the ninth largest moon in the Solar System
enumeration	Saturn	The sixth planet from the sun in our solar system.
enumeration	Saturn.Magnetosphere	The magnetosphere of the sixth planet from the sun in our solar system.
enumeration	Sun	The star upon which our solar system is centered.
enumeration	Sun.Chromosphere	The region of the Sun's (or a star's) atmosphere above the temperature minimum and below the Transition Region. The solar chromosphere is approximately 400 km to 2100 km above the photosphere, and characterized by temperatures from 4500 - 28000 K.
enumeration	Sun.Corona	The outermost atmospheric region of the Sun or a star, characterized by ionization temperatures above 10^5 K. The solar corona starts at about 2100 km above the photosphere; there is no generally defined upper limit.
enumeration	Sun.Interior	The region inside the body which is not visible from outside the body.
enumeration	Sun.Photosphere	The atmospheric layer of the Sun or a star from which continuum radiation, especially optical, is emitted to space. For the Sun, the photosphere is about 500 km thick.
enumeration	Sun.TransitionRegion	A very narrow (<100 km) layer between the chromosphere and the corona where the temperature rises abruptly from about 8000 to about 500,000 K.
enumeration	Titan	The largest moon of Saturn
enumeration	Uranus	The eighth planet from the sun in our solar system.
enumeration	Venus	The second planet from the sun in our solar

	system.

Element `InstrumentType`

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	A characterization of an integrated collection of software and hardware containing one or more sensors and associated controls used to produce data on an environment.

Diagram			
Type	enumInstrumentType		
Properties	content:	simple	
Facets	enumeration	Antenna	A sensor used to measure electric potential.
	enumeration	Channeltron	An instrument that detects electrons, ions, and UV-radiation, according to the principle of a secondary emission multiplier. It is typically used in electron spectroscopy and mass spectrometry.
	enumeration	Coronograph	An instrument which can image things very close to the Sun by using a disk to block the Sun's bright surface which reveals the faint solar corona and other celestial objects.
	enumeration	DoubleSphere	A dipole antenna of which the active (sensor) elements are small spheres located at the ends of two wires deployed in the equatorial plane, on opposite sides of a spinning spacecraft.
	enumeration	DustDetector	An instrument which determines the mass and speed of ambient dust particles.
	enumeration	ElectronDriftInstrument	An active experiment to measure the electron drift velocity based on sensing the displacement of a weak beam of electrons after one gyration in the ambient magnetic field.
	enumeration	ElectrostaticAnalyser	An instrument which uses charged plates to analyze the mass, charge and kinetic energies of charged particles which enter the instrument.
	enumeration	EnergeticParticleInstrument	An instrument that measures fluxes of charged particles as a function of time, direction of motion, mass, charge and/or species.
	enumeration	FaradayCup	An instrument consisting of an electrode from which electrical current is measured while a charged particle beam (electrons or ions) impinges on it. Used to determine energy spectrum and sometimes ion composition of the impinging particles.
	enumeration	FluxFeedback	A search coil whose bandwidth and signal/noise ratio are increased by the application of negative feedback at the sensor (flux) level by driving a collocated coil with a signal from the preamplifier.
	enumeration	FourierTransformSpectrograph	An instrument that determines the spectra of a radiative source, using time-domain measurements and a Fourier transform.
	enumeration	GeigerMuellerTube	An instrument which measures density of ionizing radiation based on interactions with a gas.
	enumeration	Imager	An instrument which samples the radiation from an area at one or more spectral ranges emitted or reflected by an object.
	enumeration	ImagingSpectrometer	An instrument which is a multispectral scanner with a very large number of channels (64-256 channels) with very narrow band widths.
	enumeration	Interferometer	An instrument to study the properties of two or more waves from the pattern of interference created by their superposition.
	enumeration	IonChamber	A device in which the collected electrical charge from ionization in a gas-filled cavity is taken to be the proportion to some parameter (e.g. dose or exposure) of radiation field
	enumeration	IonDrift	A device which measures the current produced by the displacement of ambient ions on a grid, thereby allowing the determination of the ion trajectory and velocity.

enumeration	LangmuirProbe	A monopole antenna associated with an instrument. The instrument applies a potential to the antenna which is swept to determine the voltage/ current characteristic. This provides information about the plasma surrounding the probe and spacecraft.
enumeration	LongWire	A dipole antenna whose active (sensor) elements are two wires deployed in the equatorial plane on opposite sides of a spinning spacecraft, and whose length is several times greater than the spacecraft diameter.
enumeration	Magnetometer	An instrument which measures the ambient magnetic field.
enumeration	MassSpectrometer	An instrument which distinguishes chemical species in terms of their different isotopic masses.
enumeration	MicrochannelPlate	An instrument used for the detection of elementary particles, ions, ultraviolet rays and soft X-rays constructed from very thin conductive glass capillaries.
enumeration	MultispectralImager	An instrument which captures images at multiple spectral ranges.
enumeration	NeutralAtomImager	An instrument which measures the quantity and properties of neutral particles over a range of angles. Measured properties can include mass and energy.
enumeration	NeutralParticleDetector	An instrument which measures the quantity and properties of neutral particles. Measured properties can include mass and plasma bulk densities.
enumeration	ParticleCorrelator	An instrument which correlates particle flux to help identify wave/particle interactions.
enumeration	ParticleDetector	An instrument which detects particle flux!!!
enumeration	Photometer	An instrument which measures the strength of electromagnetic radiation within a spectral band which can range from ultraviolet to infrared and includes the visible spectrum.
enumeration	Photopolarimeter	An instrument which measures the intensity and polarization or radiant energy. A photopolarimeter is a combination of a photometer and a polarimeter.
enumeration	Platform	A collection of components which can be positioned and oriented as a single unit. A platform may contain other platforms. For example, a spacecraft is a platform which may have components that can be articulated and are also considered platforms.
enumeration	ProportionalCounter	An instrument which measures energy of ionization radiation based on interactions with a gas.
enumeration	QuadrisphericalAnalyser	An instrument used for the 3-D detection of plasma, energetic electrons and ions, and for positive-ion composition measurements.
enumeration	Radar	An instrument that uses directional properties of returned power to infer spatial and/or other characteristics of a remote object.
enumeration	Radiometer	An instrument for detecting or measuring radiant energy. Radiometers are commonly limited to infrared radiation.
enumeration	ResonanceSounder	A combination of a radio receiver and a pulsed transmitter used to study the plasma surrounding a spacecraft by identifying resonances or cut-offs (of the wave dispersion relation), whose frequencies are related to the ambient plasma density and magnetic field. When the transmitter is off it is essentially a high frequency-resolution spectral power receiver.
enumeration	RetardingPotentialAnalyser	An instrument which measures ion temperatures and ion concentrations using a planar ion

			trap.
	enumeration	Riometer	An instrument which measure the signal strength in various directions of the galactic radio signals. Variations in these signals are influenced by solar flare activity and geomagnetic storm and substorm processes.
	enumeration	ScintillationDetector	An instrument which detects flouresences of a material which is excited by high energy (ionizing) electromagnetic or charged particle radiation.
	enumeration	SearchCoil	An instrument which measures the time variation of the magnetic flux threading a loop by measurement of the electric potential difference induced between the ends of the wire.
	enumeration	Sounder	An instrument which measures the radiances from an object. A sounder may measure radiances at multiple spectral ranges.
	enumeration	SpacecraftPotentialControl	An instrument to control the electric potential of a spacecraft with respect to the ambient plasma by emitting a variable current of positive ions.
	enumeration	SpectralPowerReceiver	A radio receiver which determines the power spectral density of the electric or magnetic field, or both, at one or more frequencies.
	enumeration	Spectrometer	An instrument that measures the component wavelengths of light (or other electromagnetic radiation) by splitting the light up into its component wavelengths.
	enumeration	TimeOfFlight	An instrument which measures the time it takes for a particle to travel between two detectors.
	enumeration	Unspecified	A value which is not provided.
	enumeration	WaveformReceiver	A radio receiver which outputs the value of one or more components of the electric and/or magnetic field as a function of time.

Element `ObservatoryRegion`

Namespace	http://impex-fp7.oeaw.ac.at		
Annotations	A spatial location distinguished by certain natural features or physical characteristics where an observatory is located.		
Diagram			
Type	enumRegion		
Properties	content:	simple	
Facets	enumeration	Asteroid	A small extraterrestrial body consisting mostly of rock and metal that is in orbit around the sun.
	enumeration	Callisto	A moon of the planet Jupiter, the second largest after Ganymede and the third-largest in the solar system
	enumeration	Comet	A relatively small extraterrestrial body consisting of a frozen mass that travels around the sun in a highly elliptical orbit.
	enumeration	Earth	The third planet from the sun in our solar system.
	enumeration	Earth.Magnetosheath	The region between the bow shock and the magnetopause, characterized by very turbulent plasma.
	enumeration	Earth.Magnetosphere	The region of space above the atmosphere or surface of the planet, and bounded by the magnetopause, that is under the direct influence of the planet's magnetic field.
	enumeration	Earth.Magnetosphere.Magnetotail	The region on the night side of the body where the magnetic filed is stretched backwards by the force of the solar wind. For Earth, the magnetotail begins at a night-side radial distance of 10 Re (X > -10Re).
	enumeration	Earth.Magnetosphere.Main	The region of the magnetosphere where the magnetic field lines are closed, but does not include the gaseous region gravitationally bound to the body.
	enumeration	Earth.Magnetosphere.Polar	The region near the pole of a body. For a magnetosphere the polar region is the area where magnetic field lines are open and includes the auroral zone.
	enumeration	Earth.Magnetosphere.RadiationBelt	The region within a magnetosphere where high-energy particles could potentially be trapped in a magnetic field.
	enumeration	Earth.NearSurface	The gaseous and possibly ionized environment of a body extending from the surface to some specified altitude. For the Earth, this altitude is 2000 km.
	enumeration	Earth.NearSurface.Atmosphere	The neutral gases surrounding a body that extends from the surface and is bound to the body by virtue of the gravitational attraction.
	enumeration	Earth.NearSurface.AuroralRegion	The region in the atmospheric where electrically-charged particles bombarding the upper atmosphere of a planet in the presence of a magnetic field produce an optical phenomenon.
	enumeration	Earth.NearSurface.EquatorialRegion	A region centered on the equator and limited in latitude by approximately 23 degrees north and south of the equator.
	enumeration	Earth.NearSurface.Ionosphere	The charged or ionized gases surrounding a body that are nominally bound to the body

		by virtue of the gravitational attraction.
enumeration	Earth.NearSurface.Ionosphere.DRegion	The Region of the ionosphere that exists approximately 50 to 95 km above the surface of the Earth. One of several layers in the ionosphere.
enumeration	Earth.NearSurface.Ionosphere.ERegion	A layer of ionised gas occurring at 90-150km above the ground. One of several layers in the ionosphere. Also called the The Kennelly-Heaviside layer.
enumeration	Earth.NearSurface.Ionosphere.FRegion	A region that contains ionized gases at a height of around 150-800 km above sea level, placing it in the thermosphere. the F region has the highest concentration of free electrons and ions anywhere in the atmosphere. It may be thought of as comprising two layers, the F1-and F2-layers. One of several layers in the ionosphere. Also known as the Appleton layer.
enumeration	Earth.NearSurface.Ionosphere.Topside	The region at the upper most areas of the ionosphere.
enumeration	Earth.NearSurface.Mesosphere	The layer of the atmosphere that extends from the Stratosphere to a range of 80 km to 85 km, temperature decreasing with height.
enumeration	Earth.NearSurface.Plasmasphere	A region of the magnetosphere consisting of low energy (cool) plasma. It is located above the ionosphere. The outer boundary of the plasmasphere is known as the plasmapause, which is defined by an order of magnitude drop in plasma density.
enumeration	Earth.NearSurface.PolarCap	The areas of the globe surrounding the poles and consisting of the region north of 60 degrees north latitude an the region south of 60 degrees south latitude.
enumeration	Earth.NearSurface.SouthAtlanticAnomalyRegion	The region where the Earth's inner van Allen radiation belt makes its closest approach to the planet's surface. The result is that, for a given altitude, the radiation intensity is higher over this region than elsewhere.
enumeration	Earth.NearSurface.Stratosphere	The layer of the atmosphere that extends from the troposphere to about 30 km, temperature increases with height. The stratosphere contains the ozone layer.
enumeration	Earth.NearSurface.Thermosphere	The layer of the atmosphere that extends from the Mesosphere to 640+ km, temperature increasing with height.
enumeration	Earth.NearSurface.Troposphere	The lowest layer of the atmosphere which begins at the surface and extends to between 7 km (4.4 mi) at the poles and 17 km (10.6 mi) at the equator, with some variation due to weather factors.
enumeration	Earth.Surface	The outermost area of a solid object.
enumeration	Enceladus	One of the innermost moons of Saturn.
enumeration	Europa	The sixth-closest moon of the planet Jupiter
enumeration	Ganymede	The biggest moon of Jupiter planet in our solar system.
enumeration	Heliosphere	The solar atmosphere extending roughly from the outer corona to the edge of the solar plasma at the heliopause separating primarily solar plasma from interstellar plasma.
enumeration	Heliosphere.Heliosheath	The region extending radially outward from the heliospheric termination shock and in which the decelerated solar wind plasma is still significant.
enumeration	Heliosphere.Inner	The region of the heliosphere extending radially outward from the solar coronal base to just inside 1 AU.
enumeration	Heliosphere.NearEarth	The heliospheric region near the Earth which extends to and includes the area near the L1 and L2 Lagrange point.
enumeration	Heliosphere.Outer	The region of the heliosphere extending radially

			outward from just outside 1 AU to the heliospheric termination shock.
	enumeration	Heliosphere.Remote1AU	A roughly toroidal region that includes the Earth's orbit, but exclusive of the region near the Earth.
	enumeration	Interstellar	The region between stars outside of the star's heliopause.
	enumeration	Io	The innermost of the four Galilean moons of the planet Jupiter
	enumeration	Jupiter	The fifth planet from the sun in our solar system.
	enumeration	Jupiter.Magnetosphere	The magnetosphere of the fifth planet from the sun in our solar system.
	enumeration	Mars	The forth planet from the sun in our solar system.
	enumeration	Mercury	The first planet from the sun in our solar system.
	enumeration	Mercury.Magnetosphere	The magnetosphere of the first planet from the sun in our solar system.
	enumeration	Neptune	The seventh planet from the sun in our solar system.
	enumeration	Planet	There are eigth planets in the solar system.
	enumeration	Planet.Magnetosphere	The magnetosphere of one of the planets in the solar system.
	enumeration	Pluto	The ninth (sub)planet from the sun in our solar system.
	enumeration	Rhea	The second-largest moon of Saturn and the ninth largest moon in the Solar System
	enumeration	Saturn	The sixth planet from the sun in our solar system.
	enumeration	Saturn.Magnetosphere	The magnetosphere of the sixth planet from the sun in our solar system.
	enumeration	Sun	The star upon which our solar system is centered.
	enumeration	Sun.Chromosphere	The region of the Sun's (or a star's) atmosphere above the temperature minimum and below the Transition Region. The solar chromosphere is approximately 400 km to 2100 km above the photosphere, and characterized by temperatures from 4500 - 28000 K.
	enumeration	Sun.Corona	The outermost atmospheric region of the Sun or a star, characterized by ionization temperatures above 10^5 K. The solar corona starts at about 2100 km above the photosphere; there is no generally defined upper limit.
	enumeration	Sun.Interior	The region inside the body which is not visible from outside the body.
	enumeration	Sun.Photosphere	The atmospheric layer of the Sun or a star from which continuum radiation, especially optical, is emitted to space. For the Sun, the photosphere is about 500 km thick.
	enumeration	Sun.TransitionRegion	A very narrow (<100 km) layer between the chromosphere and the corona where the temperature rises abruptly from about 8000 to about 500,000 K.
	enumeration	Titan	The largest moon of Saturn
	enumeration	Uranus	The eighth planet from the sun in our solar system.
	enumeration	Venus	The second planet from the sun in our solar system.

Element ParticleQuantity

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	A characterization of the physical properties of the particle.
Diagram	Type	enumParticleQuantity

Properties	content:	simple	
Facets	enumeration	ArrivalDirection	An angular measure of the direction from which an energetic particle or photon was incident on a detector. The angles may be measured in any coordinate system.
	enumeration	AtomicNumberDetected	The number of protons in the nucleus of an atom as determined by a detector.
	enumeration	AverageChargeState	A measure of the composite deficit (positive) or excess (negative) of electrons with respect to protons.
	enumeration	ChargeState	Charge of a fully or partially stripped ion, in units of the charge of a proton. Charge state of a bare proton = 1.
	enumeration	CountRate	The number of events per unit time.
	enumeration	Counts	The number of detection events occurring in a detector over the detector accumulation time.
	enumeration	Energy	The capacity for doing work as measured by the capability of doing work (potential energy) or the conversion of this capability to motion (kinetic energy)
	enumeration	EnergyDensity	The amount of energy per unit volume.
	enumeration	EnergyFlux	The amount of energy passing through a unit area in a unit time.
	enumeration	FlowSpeed	The rate at which particles or energy is passing through a unit area in a unit time.
	enumeration	FlowVelocity	The volume of matter passing through a unit area perpendicular to the direction of flow in a unit of time.
	enumeration	Fluence	The time integral of a flux. A fluence does not have any "per unit time" in its units.
	enumeration	Gyrofrequency	The number of gyrations around a magnetic guiding center (field line) a charged particle makes per unit time due to the Lorentz force.
	enumeration	HeatFlux	Flow of thermal energy through a gas or plasma; typically computed as third moment of a distribution function.
	enumeration	Mass	The measure of inertia (mass) of individual objects (e.g., aerosols).
	enumeration	MassDensity	The mass of particles per unit volume.
	enumeration	MassNumber	The total number of protons and neutrons (together known as nucleons) in an atomic nucleus.
	enumeration	NumberDensity	The number of particles per unit volume.
	enumeration	NumberFlux	The number of particles passing a unit area in unit time, possibly also per unit energy (or equivalent) and/or per unit look direction.
	enumeration	ParticleRadius	The mean radius for a Gaussian distribution of particles with an axial ratio of 2 and a distribution width that varies as 0.5 radius. A value of zero means no cloud was detected.
	enumeration	PhaseSpaceDensity	The number of particles per unit volume in the six-dimensional space of position and velocity.
	enumeration	PlasmaFrequency	A number-density-dependent characteristic frequency of a plasma.
	enumeration	Pressure	The force per unit area exerted by a particle distribution or field.
	enumeration	SonicMachNumber	The ratio of the bulk flow speed to the speed of sound in the medium.
	enumeration	SoundSpeed	The speed at which sound travels through a medium.
	enumeration	Temperature	A measure of the kinetic energy of random motion with respect to the average. Temperature is properly defined only for an equilibrium particle distribution (Maxwellian distribution).

	enumeration	ThermalSpeed	For a Maxwellian distribution, the difference between the mean speed and the speed within which ~69% (one sigma) of all the members of the speed distribution occur.
	enumeration	Velocity	Rate of change of position. Also used for the average velocity of a collection of particles, also referred to as "bulk velocity".
Used by	Complex Type	Particle

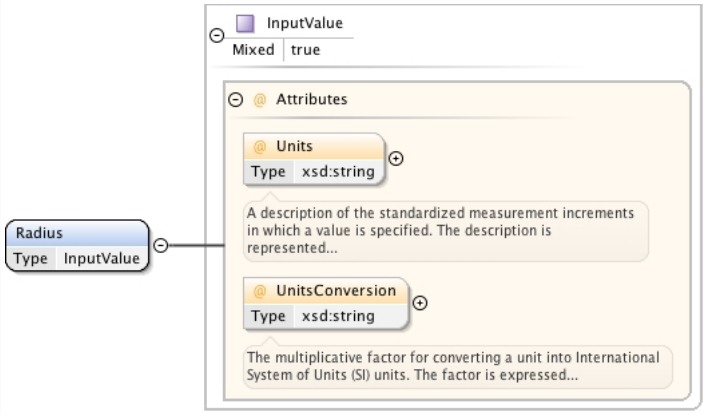
Element Radius

Namespace: http://impex-fp7.oeaw.ac.at

Diagram



Type: InputValue

Properties

content:	complex
mixed:	true

Used by: Complex Type RegionParameter

Model

Attributes

QName	Type	Use	
Units	xsd:string	optional	

```
A description of the standardized measurement
increments in which a value is specified.
The description is represented as a mathematical
phrase. Units should be represented by widely
accepted representation. For example, units
should conform to the International System
of Units (SI) which is maintained by BIPM
(Bureau International des Poids et Mesures
(see <http://www.bipm.fr/> ) when appropriate
or use tokens like "Re" to represent units
of the Radius of the Earth. Within a phrase
the circumflex (^) is used to indicate a power,
a star (*) is used to indicate multiplication
and a slash (/) division. When symbols are
not separated by a mathematical operator,
multiplication is assumed. Symbols for base
units can be found at: <http://www.bipm.fr/en/si/si_brochure/chapter2/2-1/
#symbols>
and those for common derived units can be
found at: <http://www.bipm.fr/en/si/derived_units/2-2-2.html>
```

UnitsConversion	xsd:string	optional	

```
The multiplicative factor for converting a
unit into International System of Units (SI)
units. The factor is expressed in the form
"number > x", where "number" is a numerical
value and "x" is the appropriate SI units.
The basic SI units are Enumerated: m (meter),
N (newton), kg (kilogram), Pa (pascal), s
(second), Hz (hertz), A (ampere), V (volt),
K (kelvin), W (watt), rad (radian), J (joule),
sr (steradian), C (coulomb), T (tesla), ohm
(ohm), mho (mho or seimens), H (henry), and
```

	QName	Type	Use	
		F (farad). Two useful units which are not SI units are: degree (angle), and unitless (no units). An example is: "1.0E-5>T" which converts the units, presumable nT, to tesla. Another example is: "1.0e+3>m/s" which converts a velocity expressed in kilometers per second to meters per second.

Diagram

InputPopulation
Name
Type xsd:string
A language unit by which a person or thing is known.
0..∞
Set
Type xsd:string
A collection of items for a particular purpose.
ParameterKey
Type ParameterKey
Description
Type xsd:string
A narrative explanation with detail appropriate for the item it describes. For example a description of data resource...
Caveats
Type xsd:string
Information which may be important in the avoidance of the misuse of the resource, for instance instrument maladies,...
0..∞
SimulatedRegion
Type enumImpexRegion
The portion of space simulated by the code at the time of a diagnosis. A region is distinguished by certain natural...
0..∞
Qualifier
Type enumQualifier
Characterizes the refinement to apply to a type or attribute of a quantity.
ParticleType
Type enumParticleType
A characterization of the kind of particle observed by the measurement.
ChemicalFormula
Type ChemicalFormula
Chemical formula representing a population of particle.
AtomicNumber
Type xsd:double
The number of protons in the nucleus of an atom.
PopulationMassNumber
Type xsd:double
The total number of protons and neutrons (together known as nucleons) in an atomic nucleus.
PopulationChargeState
Type xsd:double
Charge of a particle in a population, in units of the charge of a proton. Charge state of a bare proton = 1.
PopulationDensity
Type InputValue
The number of particles per unit volume.
PopulationTemperature
Type InputValue
A measure of the kinetic energy of random motion with respect to the average. Temperature is properly defined only for...
PopulationFlowSpeed
Type InputValue
The rate at which particles or energy is passing through a unit area in a unit time.
Distribution
Type xsd:string
Velocity distribution of the particles in a population.
ProductionRate
Type InputValue
TotalProductionRate
Type InputValue
InputPopulation

For example, units should conform to the International System of Units (SI) which is maintained by BIPM (Bureau International des Poids et Mesures (see <http://www.bipm.fr/>) when appropriate or use tokens like "Re" to represent units of the Radius of the Earth. Within a phrase the circumflex (^) is used to indicate a power, a star (*) is used to indicate multiplication and a slash (/) division. When symbols are not separated by a mathematical operator, multiplication is assumed. Symbols for base units can be found at: <http://www.bipm.fr/en/si/si_brochure/chapter2/2-1/#symbols> and those for common derived units can be found at: <http://www.bipm.fr/en/si/derived_units/2-2-2.html>		
	UnitsConversion	xsd:string	optional	
		The multiplicative factor for converting a unit into International System of Units (SI) units. The factor is expressed in the form "number > x", where "number" is a numerical value and "x" is the appropriate SI units. The basic SI units are Enumerated: m (meter), N (newton), kg (kilogram), Pa (pascal), s (second), Hz (hertz), A (ampere), V (volt), K (kelvin), W (watt), rad (radian), J (joule), sr (steradian), C (coulomb), T (tesla), ohm (ohm), mho (mho or seimens), H (henry), and F (farad). Two useful units which are not SI units are: degree (angle), and unitless (no units). An example is: "1.0E-5>T" which converts the units, presumable nT, to tesla. Another example is: "1.0e+3>m/s" which converts a velocity expressed in kilometers per second to meters per second.

InputField
Name
Type xsd:string
A language unit by which a person or thing is known.
0..∞
Set
Type xsd:string
A collection of items for a particular purpose.
ParameterKey
Type ParameterKey
Description
Type xsd:string
A narrative explanation with detail appropriate for the item it describes. For example a description of data resource...
Caveats
Type xsd:string
Information which may be important in the avoidance of the misuse of the resource, for instance instrument maladies,...
0..∞
SimulatedRegion
Type enumImpexRegion
The portion of space simulated by the code at the time of a diagnosis. A region is distinguished by certain natural...
CoordinateSystem
Type CoordinateSystem
0..∞
Qualifier
Type enumQualifier
Characterizes the refinement to apply to a type or attribute of a quantity.
FieldQuantity
Type enumFieldQuantity
The physical attribute of the field.
Units
Type xsd:string
A description of the standardized measurement increments in which a value is specified. The description is represented...
UnitsConversion
Type xsd:string
The multiplicative factor for converting a unit into International System of Units (SI) units. The factor is expressed...
InputLabel
Type StringSequence
A string list of the labels of each dimension of the input parameter.
FieldValue
Type StringSequence
A string list of the values of the input parameter.
InputTableURL
Type xsd:anyURI
ValidMin
Type xsd:string
The smallest legitimate value.
ValidMax
Type xsd:string
The largest legitimate value.
FieldModel
Type xsd:string
Field model imposed in the simulation run.
ModelURL
Type xsd:anyURI
Url pointing toward the description of a model used in the

Complex Type `Field`

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	The space around a radiating body within which its electromagnetic attributes can exert force on another similar body that is not in direct contact.
Diagram	
Used by	Element Field
Model	Qualifier* , FieldQuantity , FrequencyRange{0,1}
Children	FieldQuantity, FrequencyRange, Qualifier
Source	<xsd:complexType name="Field"> <xsd:annotation> <xsd:documentation xml:lang="en">The space around a radiating body within which its electromagnetic attributes can exert force on another similar body that is not in direct contact.</xsd:documentation> </xsd:annotation> <xsd:sequence> <xsd:element ref="Qualifier" minOccurs="0" maxOccurs="unbounded"/> <xsd:element ref="FieldQuantity" minOccurs="1" maxOccurs="1"/> <xsd:element ref="FrequencyRange" minOccurs="0" maxOccurs="1"/> </xsd:sequence> </xsd:complexType>

Complex Type FrequencyRange

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	The range of possible values for the observed frequency.
Diagram	Used by	Element FrequencyRange
Model	SpectralRange{0,1} , Low , High , Units , Bin*
Children	Bin, High, Low, SpectralRange, Units
Source	<xsd:complexType name="FrequencyRange"> <xsd:annotation> <xsd:documentation xml:lang="en">The range of possible values for the observed frequency.</xsd:documentation> </xsd:annotation> <xsd:sequence> <xsd:element ref="SpectralRange" minOccurs="0" maxOccurs="1"/> <xsd:element ref="Low" minOccurs="1" maxOccurs="1"/> <xsd:element ref="High" minOccurs="1" maxOccurs="1"/> <xsd:element ref="Units" minOccurs="1" maxOccurs="1"/> <xsd:element ref="Bin" minOccurs="0" maxOccurs="unbounded"/> </xsd:sequence> </xsd:complexType>

Complex Type Bin

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	A grouping of observations according to a band or window of a common attribute.

Diagram	Used by	Element Bin
Model	BandName{0,1} , Low , High
Children	BandName, High, Low

Source	`<xsd:complexType name="Bin">`
	`  <xsd:annotation>`

</xsd:complexType>
```

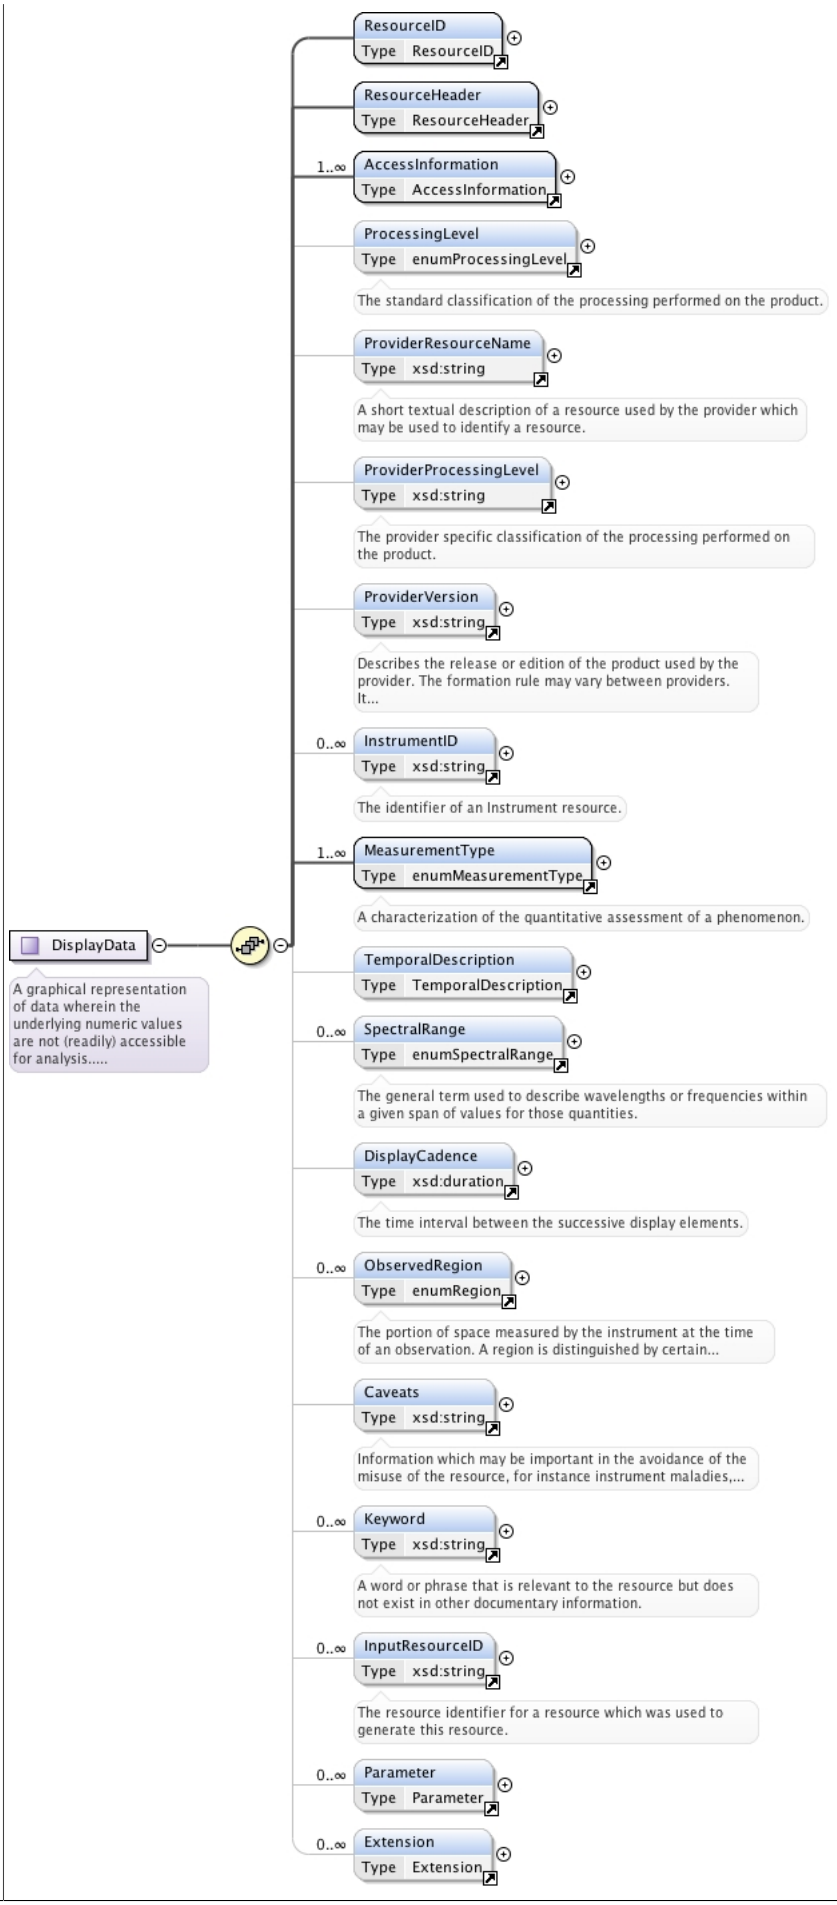
Complex Type `DisplayData`

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	`A graphical representation of data wherein the underlying numeric values are not (readily) accessible for analysis.. Examples are line plots and spectrograms. A Display Data resource is a type of "data product" which is a set of data that is uniformly processed and formatted, from one or more instruments, typically spanning the full duration of the observations of the relevant instrument(s). A data product may consist of a collection of granules of successive time spans, but may be a single high-level entity.`

Diagram



DisplayData
A graphical representation of data wherein the underlying numeric values are not (readily) accessible for analysis.....
ResourceID
Type ResourceID
ResourceHeader
Type ResourceHeader
1..∞ AccessInformation
Type AccessInformation
ProcessingLevel
Type enumProcessingLevel
The standard classification of the processing performed on the product.
ProviderResourceName
Type xsd:string
A short textual description of a resource used by the provider which may be used to identify a resource.
ProviderProcessingLevel
Type xsd:string
The provider specific classification of the processing performed on the product.
ProviderVersion
Type xsd:string
Describes the release or edition of the product used by the provider. The formation rule may vary between providers. It...
0..∞ InstrumentID
Type xsd:string
The identifier of an Instrument resource.
1..∞ MeasurementType
Type enumMeasurementType
A characterization of the quantitative assessment of a phenomenon.
TemporalDescription
Type TemporalDescription
0..∞ SpectralRange
Type enumSpectralRange
The general term used to describe wavelengths or frequencies within a given span of values for those quantities.
DisplayCadence
Type xsd:duration
The time interval between the successive display elements.
0..∞ ObservedRegion
Type enumRegion
The portion of space measured by the instrument at the time of an observation. A region is distinguished by certain...
Caveats
Type xsd:string
Information which may be important in the avoidance of the misuse of the resource, for instance instrument maladies,...
0..∞ Keyword
Type xsd:string
A word or phrase that is relevant to the resource but does not exist in other documentary information.
0..∞ InputResourceID
Type xsd:string
The resource identifier for a resource which was used to generate this resource.
0..∞ Parameter
Type Parameter
0..∞ Extension
Type Extension

  </xsd:sequence>
</xsd:complexType>
```

Complex Type `Registry`

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	A location or facility where resources are cataloged.
Diagram	Used by	Element Registry
Model	ResourceID , ResourceHeader , AccessURL , Extension*
Children	AccessURL, Extension, ResourceHeader, ResourceID
Source	<xsd:complexType name="Registry"> <xsd:annotation> <xsd:documentation xml:lang="en">A location or facility where resources are cataloged.</xsd:documentation> </xsd:annotation> <xsd:sequence> <xsd:element ref="ResourceID" minOccurs="1" maxOccurs="1"/> <xsd:element ref="ResourceHeader" minOccurs="1" maxOccurs="1"/> <xsd:element ref="AccessURL" minOccurs="1" maxOccurs="1"/> <xsd:element ref="Extension" minOccurs="0" maxOccurs="unbounded"/> </xsd:sequence> </xsd:complexType>

Complex Type `Repository`

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	A location or facility where resources are stored.
Diagram	Used by	Element Repository
Model	ResourceID , ResourceHeader , AccessURL , Extension*
Children	AccessURL, Extension, ResourceHeader, ResourceID

Source	<xsd:complexType name="Repository"> <xsd:annotation> <xsd:documentation xml:lang="en">A location or facility where resources are stored.</ xsd:documentation> </xsd:annotation> <xsd:sequence> <xsd:element ref="ResourceID" minOccurs="1" maxOccurs="1"/> <xsd:element ref="ResourceHeader" minOccurs="1" maxOccurs="1"/> <xsd:element ref="AccessURL" minOccurs="1" maxOccurs="1"/> <xsd:element ref="Extension" minOccurs="0" maxOccurs="unbounded"/> </xsd:sequence> </xsd:complexType>

Complex Type `Service`

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	A location or facility that can perform a well defined task.
Diagram	Used by	Element Service
Model	ResourceID , ResourceHeader , AccessURL , Extension*
Children	AccessURL, Extension, ResourceHeader, ResourceID
Source	<xsd:complexType name="Service"> <xsd:annotation> <xsd:documentation xml:lang="en">A location or facility that can perform a well defined task.</ xsd:documentation> </xsd:annotation> <xsd:sequence> <xsd:element ref="ResourceID" minOccurs="1" maxOccurs="1"/> <xsd:element ref="ResourceHeader" minOccurs="1" maxOccurs="1"/> <xsd:element ref="AccessURL" minOccurs="1" maxOccurs="1"/> <xsd:element ref="Extension" minOccurs="0" maxOccurs="unbounded"/> </xsd:sequence> </xsd:complexType>

Complex Type `Annotation`

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	Information which is explanatory or descriptive which is associated with another resource.

Diagram	Used by	Element Annotation
Model	ResourceID , ResourceHeader , ImageURL{0,1} , AnnotationType , PhenomenonType{0,1} , ClassificationMethod{0,1} , ConfidenceRating{0,1} , TimeSpan* , ObservationExtent* , Extension*
Children	AnnotationType, ClassificationMethod, ConfidenceRating, Extension, ImageURL, ObservationExtent, PhenomenonType, ResourceHeader, ResourceID, TimeSpan

Source	`<xsd:complexType name="Annotation">`

	`  </xsd:sequence>`
	`</xsd:complexType>`

Complex Type `Granule`

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	An accessible portion of another resource. A Granule may be composed of one or more physical pieces (files) which are considered inseparable. For example, a data storage format that maintains metadata and binary data in separate, but tightly coupled files. Granules should not be used to group files that have simple relationships or which are associated through a parent resource. For example, each file containing a time interval data for a Numerical Data resource would each be considered a Granule. The ParentID of a Granule resource must be a NumericalData resource. The attributes of a Granule supersede the corresponding attributes in the NumericalData resource.

Diagram	Used by	Element Granule
Model	ResourceID , ReleaseDate , ExpirationDate{0,1} , ParentID , PriorID* , (StartDate | RegionBegin) , (StopDate | RegionEnd) , Source+
Children	ExpirationDate, ParentID, PriorID, RegionBegin, RegionEnd, ReleaseDate, ResourceID, Source, StartDate, StopDate

Complex Type `NumericalOutput`

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	Data stored as numerical values in a specified format. A Numerical Data resource is a type of "data product" which is a set of data that is uniformly processed and formatted, from one or more instruments, typically spanning the full duration of the observations of the relevant instrument(s). A data product may consist of a collection of granules of successive time spans, but may be a single high-level entity.

Complex Type `InputValue`

Namespace	http://impex-fp7.oeaw.ac.at
Diagram	Properties	mixed: `true`
Used by	Elements: ObjectMass, Period, PopulationDensity, PopulationFlowSpeed, PopulationTemperature, ProductionRate, Radius, SubLongitude, TotalProductionRate
Model	

Attributes

QName	Type	Use	
Units	xsd:string	optional	

```
A description of the standardized measurement
increments in which a value is specified.
The description is represented as a mathematical
phrase. Units should be represented by widely
accepted representation. For example, units
should conform to the International System
of Units (SI) which is maintained by BIPM
(Bureau International des Poids et Mesures
(see <http://www.bipm.fr/> ) when appropriate
or use tokens like "Re" to represent units
of the Radius of the Earth. Within a phrase
the circumflex (^) is used to indicate a power,
a star (*) is used to indicate multiplication
and a slash (/) division. When symbols are
not separated by a mathematical operator,
multiplication is assumed. Symbols for base
units can be found at: <http://www.bipm.fr/en/si/si_brochure/chapter2/2-1/
#symbols>
and those for common derived units can be
found at: <http://www.bipm.fr/en/si/derived_units/2-2-2.html>
```

QName	Type	Use	
UnitsConversion	xsd:string	optional	

```
The multiplicative factor for converting a
unit into International System of Units (SI)
units. The factor is expressed in the form
"number > x", where "number" is a numerical
value and "x" is the appropriate SI units.
The basic SI units are Enumerated: m (meter),
N (newton), kg (kilogram), Pa (pascal), s
(second), Hz (hertz), A (ampere), V (volt),
K (kelvin), W (watt), rad (radian), J (joule),
sr (steradian), C (coulomb), T (tesla), ohm
(ohm), mho (mho or seimens), H (henry), and
F (farad). Two useful units which are not
SI units are: degree (angle), and unitless
(no units). An example is: "1.0E-5>T" which
converts the units, presumable nT, to tesla.
Another example is: "1.0e+3>m/s" which converts
a velocity expressed in kilometers per second
to meters per second.
```

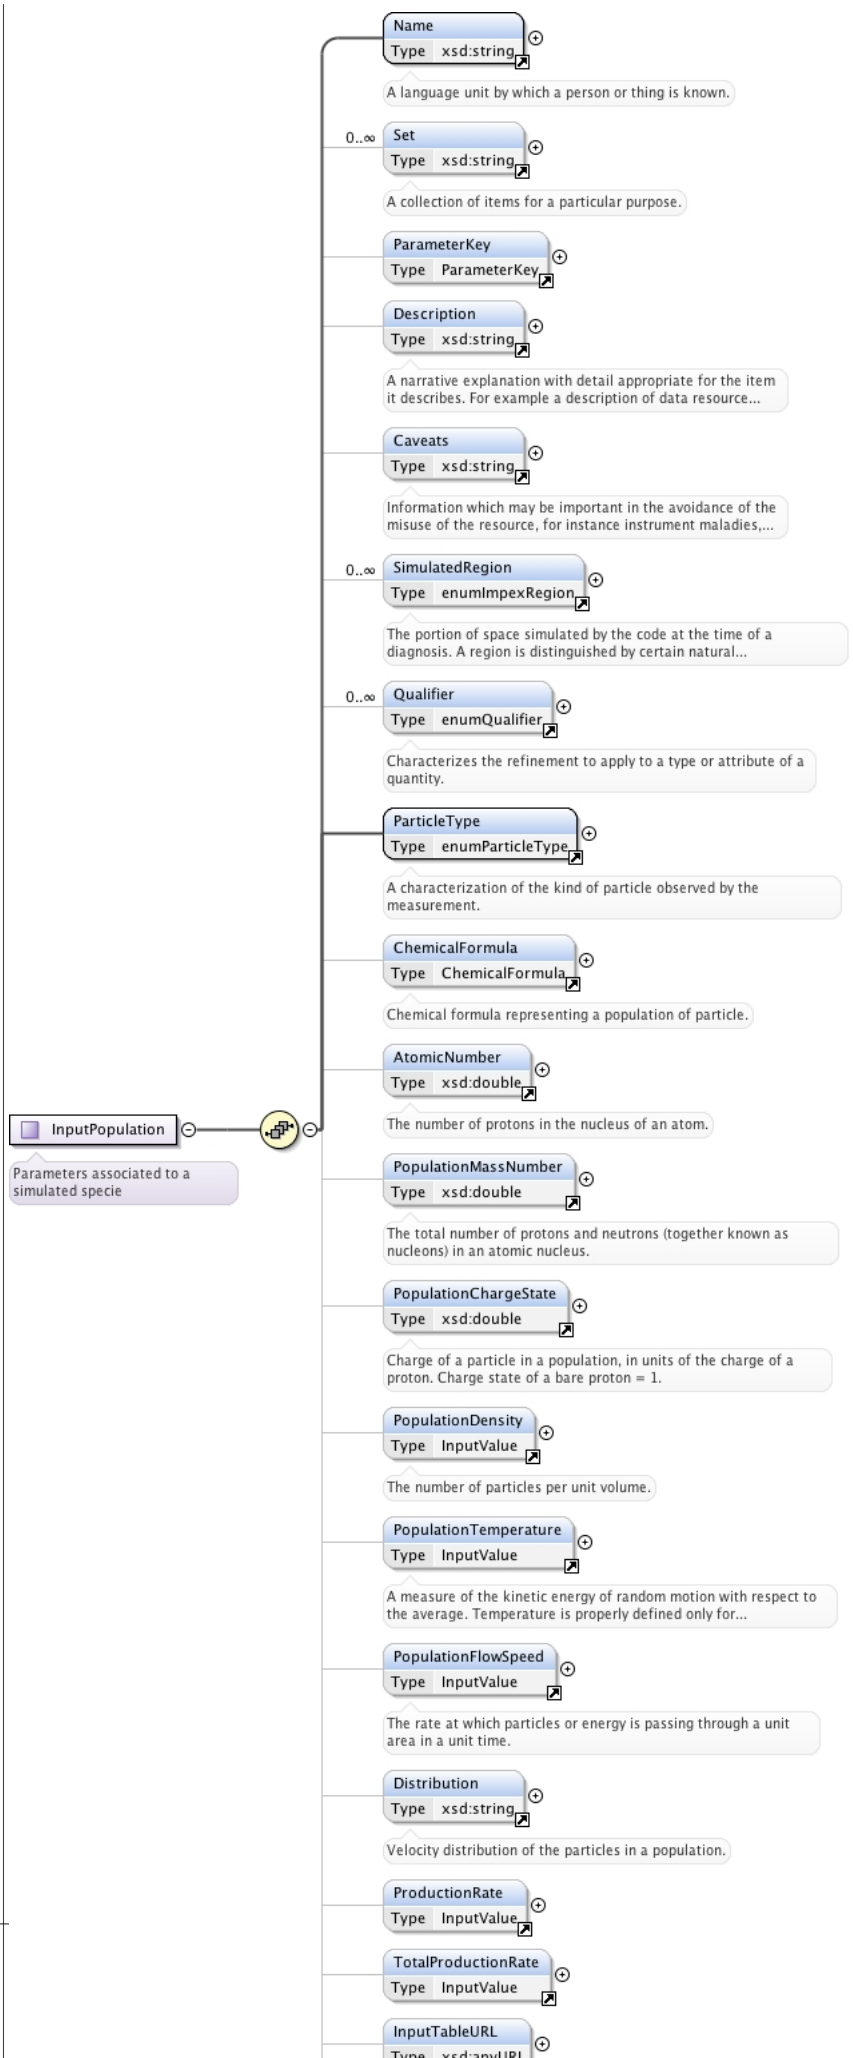
Complex Type `InputPopulation`

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	`Parameters associated to a simulated specie`

Diagram



InputPopulation
Parameters associated to a simulated specie
Name
Type xsd:string
A language unit by which a person or thing is known.
0..∞
Set
Type xsd:string
A collection of items for a particular purpose.
ParameterKey
Type ParameterKey
Description
Type xsd:string
A narrative explanation with detail appropriate for the item it describes. For example a description of data resource...
Caveats
Type xsd:string
Information which may be important in the avoidance of the misuse of the resource, for instance instrument maladies,...
0..∞
SimulatedRegion
Type enumImpexRegion
The portion of space simulated by the code at the time of a diagnosis. A region is distinguished by certain natural...
0..∞
Qualifier
Type enumQualifier
Characterizes the refinement to apply to a type or attribute of a quantity.
ParticleType
Type enumParticleType
A characterization of the kind of particle observed by the measurement.
ChemicalFormula
Type ChemicalFormula
Chemical formula representing a population of particle.
AtomicNumber
Type xsd:double
The number of protons in the nucleus of an atom.
PopulationMassNumber
Type xsd:double
The total number of protons and neutrons (together known as nucleons) in an atomic nucleus.
PopulationChargeState
Type xsd:double
Charge of a particle in a population, in units of the charge of a proton. Charge state of a bare proton = 1.
PopulationDensity
Type InputValue
The number of particles per unit volume.
PopulationTemperature
Type InputValue
A measure of the kinetic energy of random motion with respect to the average. Temperature is properly defined only for...
PopulationFlowSpeed
Type InputValue
The rate at which particles or energy is passing through a unit area in a unit time.
Distribution
Type xsd:string
Velocity distribution of the particles in a population.
ProductionRate
Type InputValue
TotalProductionRate
Type InputValue
InputTableURL

Qualifier
Type enumQualifier
Characterizes the refinement to apply to a type or attribute of a quantity.
FieldQuantity
Type enumFieldQuantity
The physical attribute of the field.
Units
Type xsd:string
A description of the standardized measurement increments in which a value is specified. The description is represented...
UnitsConversion
Type xsd:string
The multiplicative factor for converting a unit into International System of Units (SI) units. The factor is expressed...
InputLabel
Type StringSequence
A string list of the labels of each dimension of the input parameter.
FieldValue
Type StringSequence
A string list of the values of the input parameter.
InputTableURL
Type xsd:anyURI
ValidMin
Type xsd:string
The smallest legitimate value.
ValidMax
Type xsd:string
The largest legitimate value.
FieldModel
Type xsd:string
Field model imposed in the simulation run.
ModelURL
Type xsd:anyURI
Url pointing toward the description of a model used in the definition of a property or an input.

Simple Type(s)

Simple Type `enumVersion`

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	Version number.
Diagram	Type	restriction of xsd:string
Facets	enumeration 2.2.2
Used by	Element Version
Source	<xsd:simpleType name="enumVersion"> <xsd:annotation> <xsd:documentation xml:lang="en">Version number.</xsd:documentation> </xsd:annotation> <xsd:restriction base="xsd:string"> <xsd:enumeration value="2.2.2"/> </xsd:restriction> </xsd:simpleType>

Simple Type `ResourceID`

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	A Resource ID is a URI that has the form "scheme://authority/path" where "scheme" is "spase" for those resources administered through the SPASE framework, "authority" is the unique identifier for the resource provider registered within the SPASE framework and "path" is the unique identifier of the resource within the context of the "authority". The resource ID must be unique within the SPASE framework.
Diagram	Type	xsd:string
Used by	Element ResourceID

Simple Type enumRole

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	Identifiers for the assigned or assumed function or position of an individual.
Diagram	Type	restriction of xsd:string

Facets

enumeration	ArchiveSpecialist	An individual who is an expert on a collection of resources and may also be knowledgeable of the phenomenon and related physics represented by the resources. This includes librarians, curators, archive scientists and other experts.
enumeration	CoInvestigator	An individual who is a scientific peer and major participant in an investigation.
enumeration	Contributor	An entity responsible for making contributions to the content of the resource.
enumeration	DataProducer	An individual who generated the resource and is familiar with its provenance.
enumeration	DeputyPI	An individual who is an administrative or scientific leader for an investigation operating under the supervision of a Principal Investigator.
enumeration	FormerPI	An individual who had served as the administrative and scientific lead for an investigation, but no longer assumes that role.
enumeration	GeneralContact	An individual who can provide information on a range of subjects or who can direct you to a domain expert.
enumeration	MetadataContact	An individual who can affect a change in the metadata describing a resource.
enumeration	PrincipalInvestigator	An individual who is the administrative and scientific lead for an investigation.
enumeration	ProjectScientist	An individual who is an expert in the phenomenon and related physics explored by the project. A project scientist may also have a managerial role within the project.
enumeration	Publisher	An individual, organization, institution or government department responsible for the production and dissemination of a document.
enumeration	Scientist	An individual who is an expert in the phenomenon and related physics represented by the resource.
enumeration	TeamLeader	An individual who is the designated leader of an investigation.
enumeration	TeamMember	An individual who is a major participant in an investigation.
enumeration	TechnicalContact	An individual who can provide specific information with regard to the resource or supporting software

Simple Type enumFormat

Namespace	http://impex-fp7.oeaw.ac.at		
Annotations	Identifiers for data organized according to preset specifications.		
Diagram			
Type	restriction of xsd:string		
Facets	enumeration	AVI	Audio Video Interleave (AVI) a digital format for movies that conforms to the Microsoft Windows Resource Interchange File Format (RIFF).
	enumeration	Binary	A direct representation of the bits which may be stored in memory on a computer.
	enumeration	CDF	Common Data Format (CDF). A binary storage format developed at Goddard Space Flight Center (GSFC).
	enumeration	CEF	Cluster Exchange Format (CEF) is a self-documenting ASCII format designed for the exchange of data. There are two versions of CEF which are not totally compatible.
	enumeration	CEF1	Cluster Exchange Format (CEF), version 1, is a self-documenting ASCII format designed for the exchange of data. The metadata contains information compatible with the ISTP recommendations for CDF.
	enumeration	CEF2	Cluster Exchange Format (CEF), version 2, is a self-documenting ASCII format designed for the exchange of data and introduced for Cluster Active Archive. Compared to version 1, the metadata description of vectors and tensors is different.
	enumeration	Excel	A Microsoft spreadsheet format used to hold a variety of data in tables which can include calculations.
	enumeration	FITS	Flexible Image Transport System (FITS) is a digital format primarily designed to store scientific data sets consisting of multi-dimensional arrays (1-D spectra, 2-D images or 3-D data cubes) and 2-dimensional tables containing rows and columns of data.
	enumeration	GIF	Graphic Interchange Format (GIF) first introduced in 1987 by CompuServe. GIF uses LZW compression and images are limited to 256 colours.
	enumeration	HDF	Hierarchical Data Format
	enumeration	HDF4	Hierarchical Data Format, Version 4
	enumeration	HDF5	Hierarchical Data Format, Version 5
	enumeration	HTML	A text file containing structured information represented in the HyperText Mark-up Language (HTML). See <http://www.w3.org/MarkUp/>
	enumeration	Hardcopy	A permanent reproduction, or copy in the form of a physical object, of any media suitable for direct use by a person.
	enumeration	Hardcopy.Film	An image recording medium on which usually a "negative" analog image is registered. A "positive" image can be recovered or reproduced from film, which is usually made of flexible materials for ease of storage and transportation.
	enumeration	Hardcopy.Microfiche	A sheet of microfilm on which many pages of material have been photographed; a magnification system is used to read the material.
	enumeration	Hardcopy.Microfilm	Film rolls on which materials are photographed at greatly reduced size; a magnification system is used to read the material.
	enumeration	Hardcopy.Photograph	An image (positive or negative) registered

		on a piece of photo-sensitive paper
enumeration	Hardcopy.PhotographicPlate	A rigid (typically glass) medium that functions like film. Its rigidity is for guarding against image distortion due to medium deformation (caused by heat and humidity). Photographic plates are often used for astronomical photography.
enumeration	Hardcopy.Print	A sheet of any written or printed material which may include notes or graphics. Multiple printed pages may be bound into a manuscript or book.
enumeration	IDFS	Instrument Data File Set (IDFS) is a set of files written in a prescribed format which contain data, timing data, and meta-data. IDFS was developed at Southwest Research Institute (SwRI).
enumeration	IDL	Interactive Data Language (IDL) save set. IDL is a proprietary format.
enumeration	JPEG	A binary format for still images defined by the Joint Photographic Experts Group
enumeration	MATLAB_4	MATLAB Workspace save set, version 4. MAT-files are double-precision, binary, MATLAB format files. MATLAB is a proprietary product of The MathWorks.
enumeration	MATLAB_6	MATLAB Workspace save set, version 6. MAT-files are double-precision, binary, MATLAB format files. MATLAB is a proprietary product of The MathWorks.
enumeration	MATLAB_7	MATLAB Workspace save set, version 7. MAT-files are double-precision, binary, MATLAB format files. Version 7 includes data compression and Unicode encoding. MATLAB is a proprietary product of The MathWorks.
enumeration	MPEG	A digital format for movies defined by the Motion Picture Experts Group
enumeration	NCAR	The National Center for Atmospheric Research (NCAR) format. A complete description of that standard is given in appendix C of the "Report on Establishment & Operation of the Incoherent-Scatter Data Base", dated August 23, 1984, obtainable from NCAR, P.O. Box 3000 Boulder, Colorado 80307-3000.
enumeration	NetCDF	Unidata Program Center's Network Common Data Form (NetCDF). A self-describing portable data format for array-oriented data access. See <http://my.unidata.ucar.edu/content/software/netcdf>
enumeration	PDF	A document expressed in the Portable Document Format (PDF) as defined by Adobe.
enumeration	PNG	A digital format for still images. Portable Network Graphics (PNG)
enumeration	Postscript	A page description programming language created by Adobe Systems Inc. that is a device-independent industry standard for representing text and graphics.
enumeration	QuickTime	A format for digital movies, as defined by Apple Computer. See <http://developer.apple.com/quicktime/>
enumeration	TIFF	A binary format for still pictures. Tagged Image Format File (TIFF). Originally developed by Aldus and now controlled by Adobe.
enumeration	Text	A sequence of characters which may have an imposed structure or organization.
enumeration	Text.ASCII	A sequence of characters that adheres to American Standard Code for Information Interchange (ASCII) which is an 7-bit character-coding scheme.
enumeration	Text.Unicode	Text in multi-byte Unicode format.
enumeration	UDF	Universal Data Format (UDF). The Optical Technology

			Storage Association's Universal Disk Format, based on ISO 13346. See <http://www.osta.org/specs/index.htm>
	enumeration	VOTable	A proposed IVOA standard designed as a flexible storage and exchange format for tabular data.
	enumeration	XML	eXtensible Mark-up Language (XML). A structured format for representing information. See <http://www.w3.org/XML/>

Simple Type enumEncoding

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	Identifiers for unambiguous rules that establishes the representation of information within a file.
Diagram	Type	restriction of xsd:string

Facets

enumeration	ASCII	A sequence of characters that adheres to American Standard Code for Information Interchange (ASCII) which is an 7-bit character-coding scheme.
enumeration	BZIP2	An open standard algorithm by Julian Seward using Burrows-Wheeler block sorting and Huffman coding. See <http://www.bzip.org/>
enumeration	Base64	A data encoding scheme whereby binary-encoded data is converted to printable ASCII characters. It is defined as a MIME content transfer encoding for use in Internet e-mail. The only characters used are the upper- and lower-case Roman alphabet characters (A-Z, a-z), the numerals (0-9), and the "+" and "/" symbols, with the "=" symbol as a special suffix (padding) code.
enumeration	GZIP	An open standard algorithm distributed by GHU based on LZ77 and Huffman coding. See <http://www.gnu.org/software/gzip/gzip.html> or <http://www.gzip.org/>
enumeration	None	A lack or absence of anything.
enumeration	S3_BUCKET	A container of objects that comply with the Amazon Simple Storage Service (S3) specifications. A bucket has a unique, user-assigned key (name). A bucket can contain any number of objects with an aggregate size of 5 gigabytes. A bucket may be accompanied by up to 2 kilobytes of metadata.
enumeration	TAR	A file format used to collate collections of files into one larger file, for distribution or archiving, while preserving file system information such as user and group permissions, dates, and directory structures. The format was standardized by POSIX.1-1988 and later POSIX.1-2001.

	enumeration	Unicode	Text in multi-byte Unicode format.
	enumeration	ZIP	An open standard for compression which is a variation of the LZW method and was originally used in the PKZIP utility.

Simple Type enumPhenomenonType

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	Identifiers for the characteristics or categorization

	of an observation. Note: Joe King to provide.
Diagram	Type	restriction of xsd:string
Facets	enumeration ActiveRegion — A localized, transient volume of the solar atmosphere in which PLAGEs, SUNSPOTS, FACULAe, FLAREs, etc. may be observed. enumeration Aurora — An atmospheric phenomenon consisting of bands of light caused by charged solar particles following the earth's magnetic lines of force. enumeration BowShockCrossing — A crossing of the boundary between the undisturbed (except for foreshock effects) solar wind and the shocked, decelerated solar wind of the magnetosheath. enumeration CoronalHole — An extended region of the corona, exceptionally low in density and associated with unipolar photospheric regions. A coronal hole can be an "open" magnetic field in the corona and (perhaps) inner heliosphere which has a faster than average outflow (wind); A region of lower than "quiet" ion and electron density in the corona; or a region of lower peak electron temperature in the corona than in the "quiet" corona. enumeration CoronalMassEjection — A solar event (CME) that involves a burst of plasma ejected into the interplanetary medium. CME's may be observed remotely relatively near the sun or in situ in the interplanetary medium. The latter type of observations are often referred to as Interplanetary CME's (ICME's). enumeration EITWave — A wave in the corona of the Sun which produce shock waves on the Sun's chromosphere (Moreton Waves). EIT Waves are produced by large solar flare and expand outward at about 1,000 km/s. It usually appears as a slowly moving diffuse arc of brightening in H-alpha, and may travel for several hundred thousand km. enumeration EnergeticSolarParticleEvent — An enhancement of interplanetary fluxes of energetic ions accelerated by interplanetary shocks and/or solar flares. enumeration ForbushDecrease — A rapid decrease in the observed galactic cosmic ray intensity following the passage of an outwardly convecting interplanetary magnetic field disturbance, such as those associated with large CME's, that sweep some galactic cosmic rays away from Earth. enumeration GeomagneticStorm — A magnetospheric disturbance typically defined by variations in the horizontal component of the Earth's surface magnetic field. The variation typically starts with a field enhancement associated with a solar wind pressure pulse and continues with a field depression associated with an enhancement of the diamagnetic magnetospheric ring current. enumeration InterplanetaryShock — A shock propagating generally anti-sunward through the slower solar wind, often seen in front of CME-associated plasma clouds. enumeration MagneticCloud — A transient event observed in the solar wind characterized as a region of enhanced magnetic field strength, smooth rotation of the magnetic field vector and low proton density and temperature. enumeration MagnetopauseCrossing — A crossing of the interface between the shocked solar wind in the magnetosheath and the magnetic field and plasma in the magnetosphere. enumeration RadioBurst — Emissions of the sun in radio wavelengths from centimeters to dekameters, under both

			quiet and disturbed conditions. Radio Bursts can be "Type I" consisting of many short, narrow-band bursts in the metric range (300 - 50 MHz).; "Type II" consisting of narrow-band emission that begins in the meter range (300 MHz) and sweeps slowly (tens of minutes) toward dekameter wavelengths (10 MHz).; "Type III" consisting of narrow-band bursts that sweep rapidly (seconds) from decimeter to dekameter wavelengths (500 - 0.5 MHz); and "Type IV" consisting of a smooth continuum of broad-band bursts primarily in the meter range (300 - 30 MHz).
	enumeration	SectorBoundaryCrossing	A sector boundary crossing is a transit by a spacecraft across the heliospheric current sheet separating the dominantly outward (away-from-the-sun) interplanetary magnetic field of one hemisphere of the heliosphere from the dominantly inward (toward-the-sun) polarity of the other hemisphere. Such crossings have multi-day intervals of opposite IMF dominant polarities on either side.
	enumeration	SolarFlare	An explosive event in the Sun's atmosphere which produces electromagnetic radiation across the electromagnetic spectrum at multiple wavelengths from long-wave radio to the shortest wavelength gamma rays.
	enumeration	SolarWindExtreme	Intervals of unusually large or small values of solar wind attributes such as flow speed and ion density.
	enumeration	StreamInteractionRegion	The region (SIR) where two solar wind streams, typically having differing characteristics and solar sources, abut up against (and possibly partially interpenetrate) each other.
	enumeration	Substorm	A process by which plasma in the magnetotail becomes energized at a fast rate.

Simple Type `enumCoordinateRepresentation`

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	Identifiers of the method or form for specifying a given point or vector in a given coordinate system.
Diagram	Type	restriction of xsd:string
Facets	enumeration `Cartesian` — A representation in which a position vector or a measured vector (e.g., field or flow) is specified by its components along the base axes of the coordinate system. enumeration `Cylindrical` — A coordinate representation of a position vector or measured vector (field or flow) by its k-component, the magnitude of its projection

			into the i-j plane, and the azimuthal angle of the i-j plane projection.
	enumeration	Spherical	A coordinate representation of a position vector or of a measured vector by its magnitude and two direction angles. The angles are relative to the base axes of the coordinate system used. Typically the angles are phi [azimuth angle, =arctan (j/i)] and theta, where theta may be a polar angle, arctan {[SQRT(i^2+j^2)]/k}, or an elevation angle, arctan [k/SQRT (i^2+j^2)].

Simple Type enumCoordinateSystemName

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	Identifiers of the origin and orientation of a set of typically orthogonal axes.
Diagram	Type	restriction of xsd:string

Facets

enumeration	CGM	Corrected Geomagnetic - A coordinate system from a spatial point with GEO radial distance and geomagnetic latitude and longitude, follow the epoch-appropriate IGRF/DGRF model field vector through to the point where the field line crosses the geomagnetic dipole equatorial plane. Then trace the dipole magnetic field vector Earthward from that point on the equatorial plane, in the same hemisphere as the original point, until the initial radial distance is reached. Designate the dipole latitude and longitude at that point as the CGM latitude and longitude of the original point. See <http://nssdc.gsfc.nasa.gov/space/cgm/cgmm_des.html>
enumeration	Carrington	A coordinate system which is centered at the Sun and is "fixed" with respect to the synodic rotation rate; the mean synodic value is about 27.2753 days. The Astronomical Almanac gives a value for Carrington longitude of 349.03 degrees at 0000 UT on 1 January 1995.
enumeration	CSO	A generic body-Centered Solar Orbital (CSO) frame

		related to comets and asteroids. The frame is defined as a two-vector style dynamic frame as follows: The position of the sun relative to the body is the primary vector: the X axis points from the body to the sun. The inertially referenced velocity of the sun relative to the body is the secondary vector: the Y axis is the component of this velocity vector orthogonal to the X axis. The Z axis is X cross Y, completing the right-handed reference frame. All vectors are geometric: no aberration corrections are used.
enumeration	DM	Dipole Meridian - A coordinate system centered at the observation point. Z axis is parallel to the Earth's dipole axis, positive northward. X is in the plane defined by Z and the line linking the observation point with the Earth's center. Y is positive eastward. See <http://cdpp.cnes.fr/00428.pdf>
enumeration	GEI	Geocentric Equatorial Inertial - A coordinate system where the Z axis is along Earth's spin vector, positive northward. X axis points towards the first point of Aries (from the Earth towards the Sun at the vernal equinox). See Russell, 1971
enumeration	GEO	Geographic - geocentric corotating - A coordinate system where the Z axis is along Earth's spin vector, positive northward. X axis lies in Greenwich meridian, positive towards Greenwich. See Russell, 1971.
enumeration	GPHIO	In this Cartesian coordinate system, X is along the flow direction, Y is along the Ganymede–Jupiter vector, and Z is along the spin axis. These coordinates are analogous to the earth-centered GSE coordinates that relate to the direction of flow of the solar wind onto Earth’s environment.
enumeration	GSE	Geocentric Solar Ecliptic - A coordinate system where the X axis is from Earth to Sun. Z axis is normal to the ecliptic, positive northward. See Russell, 1971.
enumeration	GSEQ	Geocentric Solar Equatorial - A coordinate system where the X axis is from Earth to Sun. Y axis is parallel to solar equatorial plane. Z axis is positive northward. See Russell, 1971
enumeration	GSM	Geocentric Solar Magnetospheric - A coordinate system where the X axis is from Earth to Sun, Z axis is northward in a plane containing the X axis and the geomagnetic dipole axis. See Russell, 1971
enumeration	HAE	Heliocentric Aries Ecliptic - A coordinate system where the Z axis is normal to the ecliptic plane, positive northward. X axis is positive towards the first point of Aries (from Earth to Sun at vernal equinox). Same as SE below. See Hapgood, 1992.
enumeration	HCC	Heliocentric Cartesian - A 3-D orthonormal coordinate system that is primarily intended to specify with two dimensions a point on the solar disk. The Z axis points toward the observer. The Y axis lies in the plane defined by the solar spin vector and the Z axis, positive northward. The X axis is perpendicular to the Y and Z axes, positive toward solar west. Standard representation for this system is via the point's x and y values, expressed either as physical distances or as fractions of the solar disk radius.
enumeration	HCI	Heliographic Carrington Inertial.
enumeration	HCR	Heliocentric Radial - A 3-D orthonormal coordinate

		system that is primarily intended to specify with two dimensions a point on the solar disk. The Z axis points toward the observer. The Y axis lies in the plane defined by the solar spin vector and the Z axis, positive northward. The X axis is perpendicular to the Y and Z axes, positive toward solar west. Standard representation for this system is via the point's distance rho from the Z axis [Rho = SQRT(x**2 + y**2)] and its phase angle psi measured counterclockwise from the +Y axis [psi = arctan (-y/x)]
enumeration	HEE	Heliocentric Earth Ecliptic - A coordinate system where the Z axis is normal to the ecliptic plane, positive northward. X axis points from Sun to Earth. See Hapgood, 1992
enumeration	HEEQ	Heliocentric Earth Equatorial - A coordinate system where the Z axis is normal to the solar equatorial plane, positive northward. X axis is generally Earthward in the plane defined by the Z axis and the Sun-Earth direction. See Hapgood, 1992.
enumeration	HG	Heliographic - A heliocentric rotating coordinate system where the Z axis is normal to the solar equatorial plane, positive northward. X, Y axes rotate with a 25.38 day period. The zero longitude (X axis) is defined as the longitude that passed through the ascending node of the solar equator on the ecliptic plane on 1 January, 1854 at 12 UT. See <http://nssdc.gsfc.nasa.gov/space/helios/coor_des.html>
enumeration	HGI	Heliographic Inertial - A heliocentric coordinate system where the Z axis is normal to the solar equatorial plane, positive northward. X axis is along the intersection line between solar equatorial and ecliptic planes. The X axis was positive at SE longitude of 74.367 deg on Jan 1, 1900. (See SE below.) See <http://nssdc.gsfc.nasa.gov/space/helios/coor_des.html>
enumeration	HPC	Helioprojective Cartesian = A 3-D orthonormal (left-handed) coordinate system that is primarily intended to specify with two dimensions a point on the solar disk. The Z axis points from the observer to the center of the solar disk. The Y axis lies in the plane defined by the solar spin vector and the Z axis, positive northward. The X axis is perpendicular to the Y and Z axes, positive toward solar west. Given as the distance between the observer and the center of the solar disk, the standard representation of an (x,y) point on the solar disk is via the point's longitude angle [arctan (x/d)] and latitude angle [arctan y/d].
enumeration	HPR	Helioprojective Radial - A 3-D orthonormal (left-handed) coordinate system that is primarily intended to specify with two dimensions a point on the solar disk. The Z axis points from the observer to the center of the solar disk. The Y axis lies in the plane defined by the solar spin vector and the Z axis, positive northward. The X axis is perpendicular to the Y and Z axes, positive toward solar west. Given as the distance between the observer and the center of the solar disk, the standard representation for this system of an (x,y) point on the solar disk is via the point's latitude angle theta {= arctan [SQRT(x**2 + y**2)]/d]} or equivalent declination parameter delta (= theta - 90 deg), and its phase angle psi as measured counter- clockwise from the +Y axis [psi = arctan (-y/x)].
enumeration	HSM	TBD
enumeration	J2000	An astronomical coordinate system which uses the mean equator and equinox of Julian date 2451545.0 TT (Terrestrial Time), or January 1, 2000, noon TT. (aka J2000) to define a celestial reference frame.

enumeration	JSM	Jovian Solar Magnetospheric - A coordinate system where the X axis is from Jupiter to Sun, Z axis is northward in a plane containing the X axis and the Jovian dipole axis.
enumeration	JSO	Coordinate Sytem Related to Jupiter Jovian Solar Orbital (X anti-sunward, Y along the orbital velocity direction)
enumeration	KSM	Kronian Solar Magnetospheric - A coordinate system where the X axis is from Saturn to Sun, Z axis is northward in a plane containing the X axis and the Kronian dipole axis.
enumeration	KSO	Coordinate Sytem Related to Saturn Kronian Solar Orbital (X anti-sunward, Y along the orbital velocity direction)
enumeration	LGM	Local Geomagnetic - A coordinate system used mainly for Earth surface or near Earth surface magnetic field data. X axis northward from observation point in a geographic meridian. Z axis downward towards Earth's center. In this system, H (total horizontal component) = SQRT (Bx^2 + By^2) and D (declination angle) = arctan (By/Bx)
enumeration	MAG	Geomagnetic - geocentric. Z axis is parallel to the geomagnetic dipole axis, positive north. X is in the plane defined by the Z axis and the Earth's rotation axis. If N is a unit vector from the Earth's center to the north geographic pole, the signs of the X and Y axes are given by Y = N x Z, X = Y x Z.. See Russell, 1971, and <http://cdpp.cnes.fr/00428.pdf>
enumeration	MFA	Magnetic Field Aligned - A coordinate system spacecraft-centered system with Z in the direction of the ambient magnetic field vector. X is in the plane defined by Z and the spacecraft-Sun line, positive sunward. See <http://cdpp.cnes.fr/00428.pdf>
enumeration	MSO	Mars or Mercury Solar Orbital coordinate system. The X axis points from the center of the planet to the Sun; the Z axis is perpendicular to the orbital plane of the planet and parallel to the angular momentum vector. The Y axis completes the right-handed coordinate system.
enumeration	RTN	Radial Tangential Normal. Typically centered at a spacecraft. Used for IMF and plasma V vectors. R (radial) axis is radially away from the Sun, T (tangential) axis is normal to the plane formed by R and the Sun's spin vector, positive in the direction of planetary motion. N (normal) is R x T.
enumeration	SC	Spacecraft - A coordinate system defined by the spacecraft geometry and/or spin. Often has Z axis parallel to spacecraft spin vector. X and Y axes may or may not corotate with the spacecraft. See SR and SR2 below.
enumeration	SE	Solar Ecliptic - A heliocentric coordinate system where the Z axis is normal to the ecliptic plane, positive northward. X axis is positive towards the first point of Aries (from Earth to Sun at vernal equinox). Same as HAE above. See <http://nssdc.gsfc.nasa.gov/space/helios/coor_des.html>
enumeration	SM	Solar Magnetic - A geocentric coordinate system where the Z axis is northward along Earth's dipole axis, X axis is in plane of z axis and Earth-Sun line, positive sunward. See Russell, 1971.
enumeration	SR	Spin Reference - A special case of a Spacecraft (SC) coordinate system for a spinning spacecraft. Z is parallel to the spacecraft spin vector. X and Y rotate with the spacecraft. See <http://cdpp.cnes.fr/00428.pdf>

	enumeration	SR2	Spin Reference 2 - A special case of a Spacecraft (SC) coordinate system for a spinning spacecraft. Z is parallel to the spacecraft spin vector. X is in the plane defined by Z and the spacecraft-Sun line, positive sunward. See <http://cdpp.cnes.fr/00428.pdf>
	enumeration	SSE	Spacecraft Solar Ecliptic - A coordinate system used for deep space spacecraft, for example Helios. - X axis from spacecraft to Sun. Z axis normal to ecliptic plane, positive northward. Note: Angle between normals to ecliptic and to Helios orbit plane ~ 0.25 deg.
	enumeration	SSE_L	Selenocentric Solar Ecliptic. The X axis points from the center of the Earth's moon to the sun, the Z axis is normal to the ecliptic plane, positive northward. And the Y axis completes the right-handed set of axes.
	enumeration	SpacecraftOrbitPlane	A coordinate system where X lies in the plane normal to and in the direction of motion of the spacecraft, Z is normal to this plane and Y completes the triad in a right-handed coordinate system.
	enumeration	TIIS	In this Cartesian coordinate system, X is along the flow direction, Y is along the Titan–Saturn vector, and Z is along the spin axis. These coordinates are analogous to the earth-centered GSE coordinates that relate to the direction of flow of the solar wind onto Earth’s environment.
	enumeration	VSO	Venus Solar Orbital coordinate system. The X axis points from the center of the planet to the Sun; The Z axis is perpendicular to the orbital plane of the planet and parallel to the angular momentum vector. The Y axis completes the right-handed coordinate system.
	enumeration	WGS84	The World Geodetic System (WGS) defines a reference frame for the earth, for use in geodesy and navigation. The WGS84 uses the zero meridian as defined by the Bureau International de l'Heure.

Simple Type `enumQualifier`

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	`Identifiers for terms which refine the type or attribute of a quantity.`
Diagram	Type	restriction of xsd:string

Facets

enumeration	`Anisotropy`	`Direction-dependent property.`
enumeration	`Array`	`A sequence of values corresponding to the elements in a rectilinear, n-dimension matrix. Each value can be referenced by a unique index.`
enumeration	`Average`	`The statistical mean; the sum of a set of values divided by the number of values in the set.`
enumeration	`Characteristic`	`A quantity which can be easily identified and measured in a given environment.`
enumeration	`Circular`	`Relative to polarization, right-hand circularly polarized light is defined such that the electric field is rotating clockwise as seen by an observer towards whom the wave is moving. Left-hand circularly polarized light is defined such that the electric field is rotating counterclockwise as seen by an observer towards whom the wave is moving. The polarization of magnetohydrodynamic waves is specified with respect to the ambient mean magnetic field : right-hand polarized waves have a transverse electric field component which turns in a right-handed sense (that of the gyrating electrons) around the magnetic field.`
enumeration	`Column`	`A two-dimensional measure of a quantity. The column is the area over which the quantity is measured.`
enumeration	`Component`	`Projection of a vector along one of the base axes of a coordinate system.`
enumeration	`Component.I`	`Projection of a vector along the first named axis of a coordinate system. Typically the X axis, but could be the R axis for an RTN coordinate system.`
enumeration	`Component.J`	`Projection of a vector along the second named axis of a coordinate system. Typically the Y axis, but could be the T axis for an RTN coordinate system.`
enumeration	`Component.K`	`Projection of a vector along the third named axis of a coordinate system. Typically the Z axis, but could be the N axis for an RTN coordinate system.`
enumeration	`Core`	`The central or main part of an object or calculated distribution. For example, the part of a distribution of particles at low energies that is a thermal`

		(Maxwellian) population.
enumeration	CrossSpectrum	The Fourier transform of the cross correlation of two physical or empirical observations.
enumeration	Deviation	The difference between an observed value and the expected value of a quantity.
enumeration	Differential	A measurement within a narrow range of energy and/or solid angle.
enumeration	Direction	The spatial relation between an object and another object, the orientation of the object or the course along which the object points or moves.
enumeration	DirectionAngle	The angle between a position vector or measured vector (or one of its projections onto a plane) and one of the base axes of the coordinate system.
enumeration	DirectionAngle.AzimuthAngle	The angle between the projection into the i-j plane of a position or measured vector and the i-axis of the coordinate system. Mathematically defined as arctan(j/i).
enumeration	DirectionAngle.ElevationAngle	The angle between the position or measured vector and the i-j plane of the coordinate system. Mathematically defined as arctan(k/SQRT(i^2+j^2)).
enumeration	DirectionAngle.PolarAngle	The angle between the position or measured vector and the k-axis of the coordinate system. Mathematically defined as arctan([SQRT(i^2+j^2)]/k).
enumeration	Directional	A measurement within a narrow range of solid angle.
enumeration	FieldAligned	The component of a quantity which is oriented in the same direction of a field.
enumeration	Fit	Values that make an model agree with the data.
enumeration	Group	An assemblage of values that a certain relation or common characteristic.
enumeration	Halo	The part of an object or distribution surrounding some central body or distribution. For example, the particles above the core energies that show enhancements above the thermal population. Typically, a "power law tail" shows a break from the core Maxwellian at a particular energy.
enumeration	Integral	A flux measurement in a broad range of energy and solid angle.
enumeration	Integral.Area	Integration over the extent of a planar region, or of the surface of a solid.
enumeration	Integral.Bandwidth	Integration over the width a frequency band.
enumeration	Integral.SolidAngle	Integration over the angle in three-dimensional space that an object subtends at a point.
enumeration	LineOfSight	The line of sight is the line that connects the observer with the observed object. This expression is often used with measurements of Doppler velocity and magnetic field in magnetograms, where only the component of the vector field directed along the line of sight is measured.
enumeration	Linear	Polarization where the E-field vector is confined to a given plane
enumeration	Magnitude	A measure of the strength of a vector quantity or length of its representational vector.
enumeration	Maximum	The largest value of a batch or sample or the upper bound of a probability distribution.
enumeration	Median	The measure of central tendency of a set of n. values computed by ordering the values and taking the value at position (n. + 1) / 2 when n. is odd or the arithmetic mean of the values at positions n. / 2 and (n. / 2) + 1 when n. is even.
enumeration	Minimum	The smallest value of a batch or sample or the lower bound of a probability distribution.

enumeration	Moment	Parameters determined by integration over a distribution function convolved with a power of velocity.
enumeration	Parallel	Having the same direction as a given direction
enumeration	Peak	The maximum value for the quantity in question, over a period of time which is usually equal to the cadence.
enumeration	Perpendicular	At right angles to a given direction.
enumeration	Perturbation	Variations in the state of a system.
enumeration	Phase	A point or portion in a recurring series of changes.
enumeration	PhaseAngle	Phase difference between two or more waves, normally expressed in degrees.
enumeration	Projection	A measure of the length of a position or measured vector as projected into a plane of the coordinate system.
enumeration	Projection.IJ	A measure of the length of a position or measured vector projected into the i-j (typically X-Y) plane of the coordinate system.
enumeration	Projection.IK	A measure of the length of a position or measured vector projected into the i-k (typically X-Z) plane of the coordinate system.
enumeration	Projection.JK	A measure of the length of a position or measured vector projected into the j-k (typically Y-Z) plane of the coordinate system.
enumeration	Pseudo	Similar to or having the appearance of something else. Can be used to indicate an estimation or approximation of a particular quantity.
enumeration	Ratio	The relative magnitudes of two quantities.
enumeration	Scalar	A quantity that is completely specified by its magnitude and has no direction.
enumeration	Spectral	Characterized as a range or continuum of frequencies
enumeration	StandardDeviation	The square root of the average of the squares of deviations about the mean of a set of data. Standard deviation is a statistical measure of spread or variability.
enumeration	StokesParameters	A set of four parameters (usually called I,Q, U and V) which describe the polarization state of an electromagnetic wave propagating through space.
enumeration	Strahl	A distribution of particles concentrated in a narrow energy band. The band may be may be aligned with a secondary feature. For example, it may occur in a narrow cone aligned with the mean magnetic field direction.
enumeration	Superhalo	The part of an object or distribution surrounding some central body or distribution evident in a second break in the distribution function (e.g., a different power law). It consists of a population at a higher energies than for a halo.
enumeration	Symmetric	Equal distribution about one or more axes.
enumeration	Tensor	A generalized linear "quantity" or "geometrical entity" that can be expressed as a multi-dimensional array relative to a choice of basis of the particular space on which it is defined.
enumeration	Total	The summation of quantities over all possible species.
enumeration	Trace	The sum of the elements on the main diagonal (the diagonal from the upper left to the lower right) of a square matrix.
enumeration	Uncertainty	A statistically defined discrepancy between a measured quantity and the true value of that quantity that cannot be corrected by calculation or calibration.
enumeration	Variance	A measure of dispersion of a set of data points

			around their mean value. The expectation value of the squared deviations from the mean.
	enumeration	Vector	A set of parameter values each along some independent variable (e.g., components of a field in three orthogonal spatial directions; atmospheric temperature values at several altitudes, or at a given latitude and longitude;).

Simple Type enumFieldQuantity

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	Identifiers for the physical attribute of the field.
Diagram	Type	restriction of xsd:string

Facets

enumeration	Current	The flow of electrons through a conductor caused by a potential difference.
enumeration	Electric	The physical attribute that exerts an electrical force.
enumeration	Electromagnetic	Electric and magnetic field variations in time and space that propagate through a medium or a vacuum with the wave's propagation, electric field, and magnetic field vectors forming an orthogonal triad. Waves in this category are detected by having their field quantities measured.
enumeration	Gyrofrequency	The number of gyrations around a magnetic guiding center (field line) a charged particle makes per unit time due to the Lorentz force.
enumeration	Magnetic	The physical attribute attributed to a magnet or its equivalent.
enumeration	PlasmaFrequency	A number-density-dependent characteristic frequency of a plasma.
enumeration	Potential	A field which obeys Laplace's Equation.
enumeration	PoyntingFlux	Electromagnetic energy flux transported by a wave characterized as the rate of energy transport per unit area per steradian.

Simple Type enumSpectralRange

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	Identifiers for names associated with wavelengths. Based on the ISO 21348 Solar Irradiance Standard. Additions have been made to extend the frequency ranges to include those used in space physics. Those additions are indicated in blue text. The "Total Solar Irradiance" category has not been included since it is a type of measurement and not a specific spectral range. See Appendix A - Comparison of Spectrum Domains for a comparison of the spectral ranges with other systems.
Diagram	Type	restriction of xsd:string
Facets	enumeration CaK — A spectrum with a wavelength of range centered near 393.5 nm. VSO nickname: Ca-K image with range of 391.9 nm to 395.2 nm. enumeration ExtremeUltraviolet — A spectrum with a wavelength range of 10.0 nm to 125.0nm. VSO nickname: EUV image with a range of of 10.0 nm to 125.0 nm enumeration FarUltraviolet — A spectrum with a wavelength range of 122 nm to 200.0nm. VSO nickname: FUV image with a range of 122.0 nm to 200 nm enumeration GammaRays — Photons with a wavelength range: 0.00001 to 0.001 nm enumeration Halpha — A spectrum with a wavelength range centered at 656.3 nm. VSO nickname: H-alpha image with a spectrum range of of 655.8 nm to 656.8 nm. enumeration HardXrays — Photons with a wavelength range: 0.001 to 0.1 nm and an energy range of 12 keV to 120

			keV
	enumeration	He10830	A spectrum with a wavelength range centered at 1082.9 nm. VSO nickname: He 10830 image with a range of 1082.5 nm to 1083.3 nm.
	enumeration	He304	A spectrum centered around the resonance line of ionised helium at 304 Angstrom (30.4 nm).
	enumeration	Infrared	Photons with a wavelength range: 760 to 1.00x10^6 nm
	enumeration	K7699	A spectrum with a wavelength range centred at 769.9 nm. VSO nickname: K-7699 dopplergram with a range of 769.8 nm to 770.0 nm.
	enumeration	LBHBand	Lyman-Birge-Hopfield band in the far ultraviolet range with wavelength range of 140nm to 170 nm.
	enumeration	Microwave	Photons with a wavelength range: 1.00x10^6 to 1.50x10^7 nm
	enumeration	NaD	A spectrum with a wavelength range of centered at 589.3 nm. VSO nickname: Na-D image with a range of 588.8 nm to 589.8 nm.
	enumeration	Ni6768	A spectrum with a wavelength range centered at 676.8 nm. VSO nickname: Ni-6768 dopplergram with a range of of 676.7 nm to 676.9 nm.
	enumeration	Optical	Photons with a wavelength range: 380 to 760 nm
	enumeration	RadioFrequency	Photons with a wavelength range: 100,000 to 1.00x10^11 nm
	enumeration	SoftXRays	X-Rays with an energy range of 0.12 keV to 12 keV.
	enumeration	Ultraviolet	Photons with a wavelength range: 10 to 400 nm.
	enumeration	WhiteLight	Photons with a wavelength in the visible range for humans.
	enumeration	XRays	Photons with a wavelength range: 0.001 <= x < 10 nm

Simple Type `enumWaveQuantity`

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	Identifiers for the characterization of the physical properties of a wave.
Diagram	Type	restriction of xsd:string

Facets

enumeration	ACElectricField	Alternating electric field component of a wave.
enumeration	ACMagneticField	Alternating magnetic field component of a wave.
enumeration	Absorption	Decrease of radiant energy (relative to the background continuum spectrum).
enumeration	Albedo	The ratio of reflected radiation from the surface to incident radiation upon it.
enumeration	DopplerFrequency	Change in the frequency of a propagating wave due to motion of the source, the observer, the reflector, or the propagation medium.
enumeration	Emissivity	The energy emitted spontaneously per unit bandwidth (typically frequency) per unit time per unit mass of source. Emissivity is usually integrated over all directions/solid angles.
enumeration	EnergyFlux	The amount of energy passing through a unit area in a unit time.
enumeration	EquivalentWidth	The spectral width of a total absorption line having the amount of absorbed radiant energy being equivalent to that in an observed absorption line.
enumeration	Frequency	The number of occurrences of a repeating event per unit time.
enumeration	Gyrofrequency	The number of gyrations around a magnetic guiding center (field line) a charged particle makes per unit time due to the Lorentz force.
enumeration	Intensity	The measurement of radiant or wave energy per unit detector area per unit bandwidth per unit solid angle per unit time.
enumeration	LineDepth	The measure of the amount of absorption below the continuum (depth) in a particular wavelength or frequency in an absorption spectrum.
enumeration	MagneticField	A region of space near a magnetized body where magnetic forces can be detected (as measured by methods such as Zeeman splitting, etc.).
enumeration	ModeAmplitude	In helioseismology the magnitude of oscillation of waves of a particular geometry.
enumeration	PlasmaFrequency	A number-density-dependent characteristic frequency of a plasma.

	enumeration	Polarization	Direction of the electric vector of an electromagnetic wave. The wave can be linearly polarized in any direction perpendicular to the direction of travel, circularly polarized (clockwise or counterclockwise), unpolarized, or mixtures of the above.
	enumeration	PoyntingFlux	Electromagnetic energy flux transported by a wave characterized as the rate of energy transport per unit area per steradian.
	enumeration	PropagationTime	Time difference between transmission and reception of a wave in an active wave experiment.
	enumeration	StokesParameters	A set of four parameters (usually called I,Q, U and V) which describe the polarization state of an electromagnetic wave propagating through space.
	enumeration	Velocity	Rate of change of position. Also used for the average velocity of a collection of particles, also referred to as "bulk velocity".
	enumeration	Wavelength	The peak-to-peak distance over one wave period.

Simple Type enumMixedQuantity

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	Identifiers for the combined attributes of a mixed parameter quantity.
Diagram	Type	restriction of xsd:string

Facets

enumeration	AkasofuEpsilon	A measure of the magnetopause energy flux and an indicator of the solar wind power available for subsequent magnetospheric energization. Defined as: V*B^2*l^2sin(theta/2)^4 where B is the IMF, l is an empirical scaling parameter equal to 7 RE, and theta = tan(BY /BZ)^-1 the IMF clock angle.
enumeration	AlfvenMachNumber	The ratio of the bulk flow speed to the Alfven speed.
enumeration	AlfvenVelocity	Phase velocity of the Alfven wave; In SI units it is the velocity of the magnetic field divided by the square root of the mass density times the permeability of free space (mu).
enumeration	FrequencyToGyrofrequencyRatio	The ratio of the characteristic frequency of a medium to gyrofrequency of a particle.
enumeration	MagnetosonicMachNumber	The ratio of the velocity of fast mode waves to the Alfven velocity.
enumeration	Other	Not classified with more specific terms. The context of its usage may be described in related text.
enumeration	PlasmaBeta	The ratio of the plasma pressure (nkT) to the magnetic pressure (B^2/2mu0) of the SUM(nkT)/(B^2/2mu0).
enumeration	TotalPressure	In an MHD fluid it is the number density (N) times Boltzmann constant times the temperature in Kelvin.
enumeration	VCrossB	The cross product of the charge velocity (V) and the magnetic field (B). It is the electric field exerted on a point charge by a magnetic field.

Simple Type enumSupportQuantity

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	Identifiers for the information useful in understanding the context of an observation, typically observed or measured coincidentally

	with a physical observation.
Diagram	Type	restriction of xsd:string

Facets

enumeration	InstrumentMode	An indication of a state (mode) in which the instrument is operating. How a mode influences the interpretation and representation of data is described in instrument related documentation.
enumeration	Other	Not classified with more specific terms. The context of its usage may be described in related text.
enumeration	Positional	The specification of the location of an object or measurement within a reference coordinate system. The position is usually expressed as a set of values corresponding to the location along a set of orthogonal axes together with the date/time of the observation.
enumeration	Temporal	Pertaining to time.
enumeration	Velocity	Rate of change of position. Also used for the average velocity of a collection of particles, also referred to as "bulk velocity".

Simple Type `enumMeasurementType`

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	`Identifiers for the method of making an estimated value of a quantity that forms the basis of an observation.`
Diagram	Type	restriction of xsd:string
Facets	enumeration `ActivityIndex` — An indication, derived from one or more measurements, of the level of activity of an object or region, such as sunspot number, F10.7 flux, Dst, or the Polar Cap Indices. enumeration `Dopplergram` — A map or image depicting the spatial distribution of line-of-sight velocities of the observed object. enumeration `Dust` — Free microscopic particles of solid material. enumeration `ElectricField` — A region of space around a charged particle, or between two voltages within which a force is exerted on charged objects in its vicinity. An electric field is the electric force per unit charge.

enumeration	EnergeticParticles	Pieces of matter that are moving very fast. Energetic particles include protons, electrons, neutrons, neutrinos, the nuclei of atoms, and other sub-atomic particles.
enumeration	Ephemeris	The spatial coordinates of a body as a function of time. When used as an Instrument Type it represents the process or methods used to generate spatial coordinates.
enumeration	ImageIntensity	Measurements of the two-dimensional distribution of the intensity of photons from some region or object such as the Sun or the polar auroral regions; can be in any wavelength band, and polarized, etc.
enumeration	InstrumentStatus	A quantity directly related to the operation or function of an instrument.
enumeration	IonComposition	In situ measurements of the relative flux or density of electrically charged particles in the space environment. May give simple fluxes, but full distribution functions are sometimes measured.
enumeration	Irradiance	Irradiance - A radiometric term for the power of electromagnetic radiation at a surface, per unit area. "Irradiance" is used when the electromagnetic radiation is incident on the surface. Irradiance data may be reported in any units (i.e. counts/s) due to, for example, being at a particular wavelength, or to being a not-fully-calibrated relative measurement.
enumeration	MagneticField	A region of space near a magnetized body where magnetic forces can be detected (as measured by methods such as Zeeman splitting, etc.).
enumeration	Magnetogram	Measurements of the vector or line-of-sight magnetic field determined from remote sensing measurements of the detailed structure of spectral lines, including their splitting and polarization. ("Magnetogram.")
enumeration	NeutralAtomImages	Measurements of neutral atom fluxes as a function of look direction; often related to remote energetic charged particles that lose their charge through charge-exchange and then reach the detector on a line-of-sight trajectory.
enumeration	NeutralGas	Measurements of neutral atomic and molecular components of a gas.
enumeration	Profile	Measurements of a quantity as a function of height above an object such as the limb of a body.
enumeration	Radiance	A radiometric measurement that describes the amount of electromagnetic radiation that passes through or is emitted from a particular area, and falls within a given solid angle in a specified direction. They are used to characterize both emission from diffuse sources and reflection from diffuse surfaces.
enumeration	Spectrum	The distribution of a characteristic of a physical system or phenomenon, such as the energy emitted by a radiant source, arranged in the order of wavelengths.
enumeration	ThermalPlasma	Measurements of the plasma in the energy regime where the most of the plasma occurs. May be the basic fluxes in the form of distribution functions or the derived bulk parameters (density, flow velocity, etc.).
enumeration	Waves	Data resulting from observations of wave experiments and natural wave phenomena. Wave experiments are typically active and natural wave phenomena are passive. Examples of wave experiments include coherent/incoherent scatter radars, radio soundings, VLF propagation studies, ionospheric scintillation of beacon satellite signals, etc. Examples of natural wave phenomena include micropulsations, mesospheric gravity waves, auroral/plasmaspheric hiss, Langmuir

			waves, AKR, Jovian decametric radiation, solar radio bursts, etc.
	enumeration	Waves.Active	Exerting an influence or producing a change or effect. An active measurement is one which produces a transmission or excitation as a part of the measurement cycle.
	enumeration	Waves.Passive	Movement or effect produced by outside influence. A passive measurement is one which does not produce a transmission or excitation as a part of the measurement cycle.

Simple Type enumRegion

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	Identifiers for areas of the physical world which may be occupied or observed.
Diagram	Type	restriction of xsd:string

Facets

enumeration	Asteroid	A small extraterrestrial body consisting mostly of rock and metal that is in orbit around the sun.
enumeration	Callisto	A moon of the planet Jupiter, the second largest after Ganymede and the third-largest in the solar system
enumeration	Comet	A relatively small extraterrestrial body consisting of a frozen mass that travels around the sun in a highly elliptical orbit.
enumeration	Earth	The third planet from the sun in our solar system.
enumeration	Earth.Magnetosheath	The region between the bow shock and the magnetopause, characterized by very turbulent plasma.
enumeration	Earth.Magnetosphere	The region of space above the atmosphere or surface of the planet, and bounded by the magnetopause, that is under the direct influence of the planet's magnetic field.
enumeration	Earth.Magnetosphere.Magnetotail	The region on the night side of the body where the magnetic filed is stretched backwards by the force of the solar wind. For Earth, the magnetotail begins at a night-side radial distance of 10 Re (X > -10Re).
enumeration	Earth.Magnetosphere.Main	The region of the magnetosphere where the magnetic field lines are closed, but does not include the gaseous region gravitationally bound to the body.
enumeration	Earth.Magnetosphere.Polar	The region near the pole of a body. For a magnetosphere the polar region is the area where magnetic field lines are open and includes the auroral zone.
enumeration	Earth.Magnetosphere.RadiationBelt	The region within a magnetosphere where high-energy particles could potentially be trapped in a magnetic field.
enumeration	Earth.NearSurface	The gaseous and possibly ionized environment of a body extending from the surface to some specified altitude. For the Earth, this altitude is 2000 km.
enumeration	Earth.NearSurface.Atmosphere	The neutral gases surrounding a body that extends from the surface and is bound to the body by virtue of the gravitational attraction.
enumeration	Earth.NearSurface.AuroralRegion	The region in the atmospheric where electrically-charged particles bombarding the upper atmosphere of a planet in the presence of a magnetic field produce an optical phenomenon.
enumeration	Earth.NearSurface.EquatorialRegion	A region centered on the equator and limited in latitude by approximately 23 degrees north and south of the equator.
enumeration	Earth.NearSurface.Ionosphere	The charged or ionized gases surrounding a body that are nominally bound to the body

		by virtue of the gravitational attraction.
enumeration	Earth.NearSurface.Ionosphere.DRegion	The Region of the ionosphere that exists approximately 50 to 95 km above the surface of the Earth. One of several layers in the ionosphere.
enumeration	Earth.NearSurface.Ionosphere.ERegion	A layer of ionised gas occurring at 90-150km above the ground. One of several layers in the ionosphere. Also called the The Kennelly-Heaviside layer.
enumeration	Earth.NearSurface.Ionosphere.FRegion	A region that contains ionized gases at a height of around 150-800 km above sea level, placing it in the thermosphere. the F region has the highest concentration of free electrons and ions anywhere in the atmosphere. It may be thought of as comprising two layers, the F1-and F2-layers. One of several layers in the ionosphere. Also known as the Appleton layer.
enumeration	Earth.NearSurface.Ionosphere.Topside	The region at the upper most areas of the ionosphere.
enumeration	Earth.NearSurface.Mesosphere	The layer of the atmosphere that extends from the Stratosphere to a range of 80 km to 85 km, temperature decreasing with height.
enumeration	Earth.NearSurface.Plasmasphere	A region of the magnetosphere consisting of low energy (cool) plasma. It is located above the ionosphere. The outer boundary of the plasmasphere is known as the plasmapause, which is defined by an order of magnitude drop in plasma density.
enumeration	Earth.NearSurface.PolarCap	The areas of the globe surrounding the poles and consisting of the region north of 60 degrees north latitude an the region south of 60 degrees south latitude.
enumeration	Earth.NearSurface.SouthAtlanticAnomalyRegion	The region where the Earth's inner van Allen radiation belt makes its closest approach to the planet's surface. The result is that, for a given altitude, the radiation intensity is higher over this region than elsewhere.
enumeration	Earth.NearSurface.Stratosphere	The layer of the atmosphere that extends from the troposphere to about 30 km, temperature increases with height. The stratosphere contains the ozone layer.
enumeration	Earth.NearSurface.Thermosphere	The layer of the atmosphere that extends from the Mesosphere to 640+ km, temperature increasing with height.
enumeration	Earth.NearSurface.Troposphere	The lowest layer of the atmosphere which begins at the surface and extends to between 7 km (4.4 mi) at the poles and 17 km (10.6 mi) at the equator, with some variation due to weather factors.
enumeration	Earth.Surface	The outermost area of a solid object.
enumeration	Enceladus	One of the innermost moons of Saturn.
enumeration	Europa	The sixth-closest moon of the planet Jupiter
enumeration	Ganymede	The biggest moon of Jupiter planet in our solar system.
enumeration	Heliosphere	The solar atmosphere extending roughly from the outer corona to the edge of the solar plasma at the heliopause separating primarily solar plasma from interstellar plasma.
enumeration	Heliosphere.Heliosheath	The region extending radially outward from the heliospheric termination shock and in which the decelerated solar wind plasma is still significant.
enumeration	Heliosphere.Inner	The region of the heliosphere extending radially outward from the solar coronal base to just inside 1 AU.
enumeration	Heliosphere.NearEarth	The heliospheric region near the Earth which extends to and includes the area near the L1 and L2 Lagrange point.
enumeration	Heliosphere.Outer	The region of the heliosphere extending radially

			outward from just outside 1 AU to the heliospheric termination shock.
	enumeration	Heliosphere.Remote1AU	A roughly toroidal region that includes the Earth's orbit, but exclusive of the region near the Earth.
	enumeration	Interstellar	The region between stars outside of the star's heliopause.
	enumeration	Io	The innermost of the four Galilean moons of the planet Jupiter
	enumeration	Jupiter	The fifth planet from the sun in our solar system.
	enumeration	Jupiter.Magnetosphere	The magnetosphere of the fifth planet from the sun in our solar system.
	enumeration	Mars	The forth planet from the sun in our solar system.
	enumeration	Mercury	The first planet from the sun in our solar system.
	enumeration	Mercury.Magnetosphere	The magnetosphere of the first planet from the sun in our solar system.
	enumeration	Neptune	The seventh planet from the sun in our solar system.
	enumeration	Planet	There are eigth planets in the solar system.
	enumeration	Planet.Magnetosphere	The magnetosphere of one of the planets in the solar system.
	enumeration	Pluto	The ninth (sub)planet from the sun in our solar system.
	enumeration	Rhea	The second-largest moon of Saturn and the ninth largest moon in the Solar System
	enumeration	Saturn	The sixth planet from the sun in our solar system.
	enumeration	Saturn.Magnetosphere	The magnetosphere of the sixth planet from the sun in our solar system.
	enumeration	Sun	The star upon which our solar system is centered.
	enumeration	Sun.Chromosphere	The region of the Sun's (or a star's) atmosphere above the temperature minimum and below the Transition Region. The solar chromosphere is approximately 400 km to 2100 km above the photosphere, and characterized by temperatures from 4500 - 28000 K.
	enumeration	Sun.Corona	The outermost atmospheric region of the Sun or a star, characterized by ionization temperatures above 10^5 K. The solar corona starts at about 2100 km above the photosphere; there is no generally defined upper limit.
	enumeration	Sun.Interior	The region inside the body which is not visible from outside the body.
	enumeration	Sun.Photosphere	The atmospheric layer of the Sun or a star from which continuum radiation, especially optical, is emitted to space. For the Sun, the photosphere is about 500 km thick.
	enumeration	Sun.TransitionRegion	A very narrow (<100 km) layer between the chromosphere and the corona where the temperature rises abruptly from about 8000 to about 500,000 K.
	enumeration	Titan	The largest moon of Saturn
	enumeration	Uranus	The eighth planet from the sun in our solar system.
	enumeration	Venus	The second planet from the sun in our solar system.

Simple Type enumDocumentType

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	Identifiers for the characterization of the content or purpose of a document.
Diagram	Type	restriction of xsd:string

Facets

enumeration	Other	
enumeration	Poster	A set of information arranged on a single page or sheet, typically in a large format.
enumeration	Presentation	A set of information that is used when communicating to an audience.
enumeration	Report	A document which describes the findings of some individual or group.
enumeration	Specification	A detailed description of the requirements and other aspects of an object or component that may be used to develop an implementation.
enumeration	TechnicalNote	A document summarizing the performance and other technical characteristics of a product, machine, component, subsystem or software in sufficient detail to be used by an engineer or researcher.
enumeration	WhitePaper	An authoritative report giving information or proposals on an issue.

Simple Type `enumInstrumentType`

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	Identifiers for the type of experiment the instrument performs. This is the technique of observation.
Diagram	Type	restriction of xsd:string

Facets

enumeration	Antenna	A sensor used to measure electric potential.
enumeration	Channeltron	An instrument that detects electrons, ions, and UV-radiation, according to the principle of a secondary emission multiplier. It is typically used in electron spectroscopy and mass spectrometry.
enumeration	Coronograph	An instrument which can image things very close to the Sun by using a disk to block the Sun's bright surface which reveals the faint solar corona and other celestial objects.
enumeration	DoubleSphere	A dipole antenna of which the active (sensor) elements are small spheres located at the ends of two wires deployed in the equatorial plane, on opposite sides of a spinning spacecraft.
enumeration	DustDetector	An instrument which determines the mass and speed of ambient dust particles.
enumeration	ElectronDriftInstrument	An active experiment to measure the electron drift velocity based on sensing the displacement of a weak beam of electrons after one gyration in the ambient magnetic field.
enumeration	ElectrostaticAnalyser	An instrument which uses charged plates to analyze the mass, charge and kinetic energies of charged particles which enter the instrument.
enumeration	EnergeticParticleInstrument	An instrument that measures fluxes of charged particles as a function of time, direction of motion, mass, charge and/or species.
enumeration	FaradayCup	An instrument consisting of an electrode from which electrical current is measured while a charged particle beam (electrons or ions) impinges on it. Used to determine energy spectrum and sometimes ion composition of the impinging particles.
enumeration	FluxFeedback	A search coil whose bandwidth and signal/noise ratio are increased by the application of

		negative feedback at the sensor (flux) level by driving a collocated coil with a signal from the preamplifier.
enumeration	FourierTransformSpectrograph	An instrument that determines the spectra of a radiative source, using time-domain measurements and a Fourier transform.
enumeration	GeigerMuellerTube	An instrument which measures density of ionizing radiation based on interactions with a gas.
enumeration	Imager	An instrument which samples the radiation from an area at one or more spectral ranges emitted or reflected by an object.
enumeration	ImagingSpectrometer	An instrument which is a multispectral scanner with a very large number of channels (64-256 channels) with very narrow band widths.
enumeration	Interferometer	An instrument to study the properties of two or more waves from the pattern of interference created by their superposition.
enumeration	IonChamber	A device in which the collected electrical charge from ionization in a gas-filled cavity is taken to be the proportion to some parameter (e.g. dose or exposure) of radiation field
enumeration	IonDrift	A device which measures the current produced by the displacement of ambient ions on a grid, thereby allowing the determination of the ion trajectory and velocity.
enumeration	LangmuirProbe	A monopole antenna associated with an instrument. The instrument applies a potential to the antenna which is swept to determine the voltage/ current characteristic. This provides information about the plasma surrounding the probe and spacecraft.
enumeration	LongWire	A dipole antenna whose active (sensor) elements are two wires deployed in the equatorial plane on opposite sides of a spinning spacecraft, and whose length is several times greater than the spacecraft diameter.
enumeration	Magnetometer	An instrument which measures the ambient magnetic field.
enumeration	MassSpectrometer	An instrument which distinguishes chemical species in terms of their different isotopic masses.
enumeration	MicrochannelPlate	An instrument used for the detection of elementary particles, ions, ultraviolet rays and soft X-rays constructed from very thin conductive glass capillaries.
enumeration	MultispectralImager	An instrument which captures images at multiple spectral ranges.
enumeration	NeutralAtomImager	An instrument which measures the quantity and properties of neutral particles over a range of angles. Measured properties can include mass and energy.
enumeration	NeutralParticleDetector	An instrument which measures the quantity and properties of neutral particles. Measured properties can include mass and plasma bulk densities.
enumeration	ParticleCorrelator	An instrument which correlates particle flux to help identify wave/particle interactions.
enumeration	ParticleDetector	An instrument which detects particle flux!!!
enumeration	Photometer	An instrument which measures the strength of electromagnetic radiation within a spectral band which can range from ultraviolet to infrared and includes the visible spectrum.
enumeration	Photopolarimeter	An instrument which measures the intensity and polarization or radiant energy. A photopolarimeter is a combination of a photometer and a polarimeter.
enumeration	Platform	A collection of components which can be positioned

			and oriented as a single unit. A platform may contain other platforms. For example, a spacecraft is a platform which may have components that can be articulated and are also considered platforms.
	enumeration	ProportionalCounter	An instrument which measures energy of ionization radiation based on interactions with a gas.
	enumeration	QuadrisphericalAnalyser	An instrument used for the 3-D detection of plasma, energetic electrons and ions, and for positive-ion composition measurements.
	enumeration	Radar	An instrument that uses directional properties of returned power to infer spatial and/or other characteristics of a remote object.
	enumeration	Radiometer	An instrument for detecting or measuring radiant energy. Radiometers are commonly limited to infrared radiation.
	enumeration	ResonanceSounder	A combination of a radio receiver and a pulsed transmitter used to study the plasma surrounding a spacecraft by identifying resonances or cut-offs (of the wave dispersion relation), whose frequencies are related to the ambient plasma density and magnetic field. When the transmitter is off it is essentially a high frequency-resolution spectral power receiver.
	enumeration	RetardingPotentialAnalyser	An instrument which measures ion temperatures and ion concentrations using a planar ion trap.
	enumeration	Riometer	An instrument which measure the signal strength in various directions of the galactic radio signals. Variations in these signals are influenced by solar flare activity and geomagnetic storm and substorm processes.
	enumeration	ScintillationDetector	An instrument which detects flouresences of a material which is excited by high energy (ionizing) electromagnetic or charged particle radiation.
	enumeration	SearchCoil	An instrument which measures the time variation of the magnetic flux threading a loop by measurement of the electric potential difference induced between the ends of the wire.
	enumeration	Sounder	An instrument which measures the radiances from an object. A sounder may measure radiances at multiple spectral ranges.
	enumeration	SpacecraftPotentialControl	An instrument to control the electric potential of a spacecraft with respect to the ambient plasma by emitting a variable current of positive ions.
	enumeration	SpectralPowerReceiver	A radio receiver which determines the power spectral density of the electric or magnetic field, or both, at one or more frequencies.
	enumeration	Spectrometer	An instrument that measures the component wavelengths of light (or other electromagnetic radiation) by splitting the light up into its component wavelengths.
	enumeration	TimeOfFlight	An instrument which measures the time it takes for a particle to travel between two detectors.
	enumeration	Unspecified	A value which is not provided.
	enumeration	WaveformReceiver	A radio receiver which outputs the value of one or more components of the electric and/or magnetic field as a function of time.

Simple Type `enumParticleQuantity`

Namespace	http://impex-fp7.oeaw.ac.at

Annotations	Identifiers for the characterization of the physical properties of the particle.		
Diagram			
Type	restriction of xsd:string		
Facets	enumeration	ArrivalDirection	An angular measure of the direction from which an energetic particle or photon was incident on a detector. The angles may be measured in any coordinate system.
	enumeration	AtomicNumberDetected	The number of protons in the nucleus of an atom as determined by a detector.
	enumeration	AverageChargeState	A measure of the composite deficit (positive) or excess (negative) of electrons with respect to protons.
	enumeration	ChargeState	Charge of a fully or partially stripped ion, in units of the charge of a proton. Charge state of a bare proton = 1.
	enumeration	CountRate	The number of events per unit time.
	enumeration	Counts	The number of detection events occurring in a detector over the detector accumulation time.
	enumeration	Energy	The capacity for doing work as measured by the capability of doing work (potential energy) or the conversion of this capability to motion (kinetic energy)
	enumeration	EnergyDensity	The amount of energy per unit volume.
	enumeration	EnergyFlux	The amount of energy passing through a unit area in a unit time.
	enumeration	FlowSpeed	The rate at which particles or energy is passing through a unit area in a unit time.
	enumeration	FlowVelocity	The volume of matter passing through a unit area perpendicular to the direction of flow in a unit of time.
	enumeration	Fluence	The time integral of a flux. A fluence does not have any "per unit time" in its units.
	enumeration	Gyrofrequency	The number of gyrations around a magnetic guiding center (field line) a charged particle makes per unit time due to the Lorentz force.
	enumeration	HeatFlux	Flow of thermal energy through a gas or plasma; typically computed as third moment of a distribution function.
	enumeration	Mass	The measure of inertia (mass) of individual objects (e.g., aerosols).
	enumeration	MassDensity	The mass of particles per unit volume.
	enumeration	MassNumber	The total number of protons and neutrons (together known as nucleons) in an atomic nucleus.
	enumeration	NumberDensity	The number of particles per unit volume.
	enumeration	NumberFlux	The number of particles passing a unit area in unit time, possibly also per unit energy (or equivalent) and/or per unit look direction.
	enumeration	ParticleRadius	The mean radius for a Gaussian distribution of particles with an axial ratio of 2 and a distribution width that varies as 0.5 radius. A value of zero means no cloud was detected.
	enumeration	PhaseSpaceDensity	The number of particles per unit volume in the six-dimensional space of position and velocity.
	enumeration	PlasmaFrequency	A number-density-dependent characteristic frequency of a plasma.
	enumeration	Pressure	The force per unit area exerted by a particle distribution or field.
	enumeration	SonicMachNumber	The ratio of the bulk flow speed to the speed

			of sound in the medium.
	enumeration	SoundSpeed	The speed at which sound travels through a medium.
	enumeration	Temperature	A measure of the kinetic energy of random motion with respect to the average. Temperature is properly defined only for an equilibrium particle distribution (Maxwellian distribution).
	enumeration	ThermalSpeed	For a Maxwellian distribution, the difference between the mean speed and the speed within which ~69% (one sigma) of all the members of the speed distribution occur.
	enumeration	Velocity	Rate of change of position. Also used for the average velocity of a collection of particles, also referred to as "bulk velocity".

Simple Type enumComponent

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	Identifiers for the axis of coordinate systems.
Diagram	Type	restriction of xsd:string

Facets

enumeration	I	Projection of a vector along the first named axis of a coordinate system. Typically the X axis, but could be the R axis for an RTN coordinate system.
enumeration	J	Projection of a vector along the second named axis of a coordinate system. Typically the Y axis, but could be the T axis for an RTN coordinate system.
enumeration	K	Projection of a vector along the third named axis of a coordinate system. Typically the Z axis, but could be the N axis for an RTN coordinate system.

Simple Type `enumEarth`

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	Identifiers for the regions surrounding the Earth.
Diagram	Type	restriction of xsd:string

Facets

enumeration	Magnetosheath	The region between the bow shock and the magnetopause,

		characterized by very turbulent plasma.
enumeration	Magnetosphere	The region of space above the atmosphere or surface of the planet, and bounded by the magnetopause, that is under the direct influence of the planet's magnetic field.
enumeration	Magnetosphere.Magnetotail	The region on the night side of the body where the magnetic filed is stretched backwards by the force of the solar wind. For Earth, the magnetotail begins at a night-side radial distance of 10 Re (X > -10Re).
enumeration	Magnetosphere.Main	The region of the magnetosphere where the magnetic field lines are closed, but does not include the gaseous region gravitationally bound to the body.
enumeration	Magnetosphere.Polar	The region near the pole of a body. For a magnetosphere the polar region is the area where magnetic field lines are open and includes the auroral zone.
enumeration	Magnetosphere.RadiationBelt	The region within a magnetosphere where high-energy particles could potentially be trapped in a magnetic field.
enumeration	NearSurface	The gaseous and possibly ionized environment of a body extending from the surface to some specified altitude. For the Earth, this altitude is 2000 km.
enumeration	NearSurface.Atmosphere	The neutral gases surrounding a body that extends from the surface and is bound to the body by virtue of the gravitational attraction.
enumeration	NearSurface.AuroralRegion	The region in the atmospheric where electrically-charged particles bombarding the upper atmosphere of a planet in the presence of a magnetic field produce an optical phenomenon.
enumeration	NearSurface.EquatorialRegion	A region centered on the equator and limited in latitude by approximately 23 degrees north and south of the equator.
enumeration	NearSurface.Ionosphere	The charged or ionized gases surrounding a body that are nominally bound to the body by virtue of the gravitational attraction.
enumeration	NearSurface.Ionosphere.DRegion	The layer of the ionosphere that exists approximately 50 to 95 km above the surface of the Earth. One of several layers in the ionosphere.
enumeration	NearSurface.Ionosphere.ERegion	A layer of ionised gas occurring at 90-150km above the ground. One of several layers in the ionosphere. Also called the The Kennelly-Heaviside layer.
enumeration	NearSurface.Ionosphere.FRegion	A layer that contains ionized gases at a height of around 150-800 km above sea level, placing it in the thermosphere. the F region has the highest concentration of free electrons and ions anywhere in the atmosphere. It may be thought of as comprising two layers, the F1-and F2-layers. One of several layers in the ionosphere. Also known as the Appleton layer.
enumeration	NearSurface.Ionosphere.Topside	The region at the upper most areas of the ionosphere.
enumeration	NearSurface.Mesosphere	The layer of the atmosphere that extends from the Stratosphere to a range of 80 km to 85 km, temperature decreasing with height.
enumeration	NearSurface.Plasmasphere	A region of the magnetosphere consisting of low energy (cool) plasma. It is located above the ionosphere. The outer boundary of the plasmasphere is known as the plasmapause, which is defined by an order of magnitude drop in plasma density.
enumeration	NearSurface.PolarCap	The areas of the globe surrounding the poles and consisting of the region north of 60 degrees north latitude an the region south of 60 degrees south latitude.

	enumeration	NearSurface.SouthAtlanticAnomalyRegion	The location where the Earth's inner van Allen radiation belt makes its closest approach to the planet's surface. The result is that, for a given altitude, the radiation intensity is higher over this region than elsewhere.
	enumeration	NearSurface.Stratosphere	The layer of the atmosphere that extends from the troposphere to about 30 km, temperature increases with height. The stratosphere contains the ozone layer.
	enumeration	NearSurface.Thermosphere	The layer of the atmosphere that extends from the Mesosphere to 640+ km, temperature increasing with height.
	enumeration	NearSurface.Troposphere	The lowest layer of the atmosphere which begins at the surface and extends to between 7 km (4.4 mi) at the poles and 17 km (10.6 mi) at the equator, with some variation due to weather factors.
	enumeration	Surface	The outermost area of a solid object.

Simple Type enumHardcopy

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	Identifiers for permanent reproductions, or copy in the form of a physical object, of any media suitable for direct use by a person.
Diagram	Type	restriction of xsd:string

Facets

enumeration	Film	An image recording medium on which usually a "negative" analog image is registered. A "positive" image can be recovered or reproduced from film, which is usually made of flexible materials for ease of storage and transportation.
enumeration	Microfiche	A sheet of microfilm on which many pages of material have been photographed; a magnification system is used to read the material.
enumeration	Microfilm	Film rolls on which materials are photographed at greatly reduced size; a magnification system is used to read the material.
enumeration	Photograph	An image (positive or negative) registered on a piece of photo-sensitive paper
enumeration	PhotographicPlate	A rigid (typically glass) medium that functions like film. Its rigidity is for guarding against image distortion due to medium deformation (caused by heat and humidity). Photographic plates are often used for astronomical photography.
enumeration	Print	A sheet of any written or printed material which may include notes or graphics. Multiple printed pages may be bound into a manuscript or book.

Simple Type enumMagnetosphere

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	Identifiers for the region of space above the atmosphere or surface of the planet, and bounded by the magnetopause, that is under the direct influence of planet's magnetic field.
Diagram	
Type	restriction of xsd:string		
Facets	enumeration	Magnetotail	The region on the night side of the body where the magnetic filed is stretched backwards by the force of the solar wind. For Earth, the magnetotail begins at a night-side radial distance of 10 Re (X > -10Re).
	enumeration	Main	The region of the magnetosphere where the magnetic field lines are closed, but does not include the gaseous region gravitationally bound to the body.
	enumeration	Polar	The region near the pole of a body. For a magnetosphere the polar region is the area where magnetic field lines are open and includes the auroral zone.
	enumeration	RadiationBelt	The region within a magnetosphere where high-energy particles could potentially be trapped in a magnetic field.

Simple Type enumNearSurface

Namespace	http://impex-fp7.oeaw.ac.at		
Annotations	Identifiers for regions of the gaseous and possibly ionized environment of a body extending from the surface to some specified altitude.		
Diagram			
Type	restriction of xsd:string		
Facets	enumeration	Atmosphere	The neutral gases surrounding a body that extends from the surface and is bound to the body by virtue of the gravitational attraction.
	enumeration	AuroralRegion	The region in the atmospheric where electrically-charged particles bombarding the upper atmosphere of a planet in the presence of a magnetic

			field produce an optical phenomenon.
	enumeration	EquatorialRegion	A region centered on the equator and limited in latitude by approximately 23 degrees north and south of the equator.
	enumeration	Ionosphere	The charged or ionized gases surrounding a body that are nominally bound to the body by virtue of the gravitational attraction.
	enumeration	Ionosphere.DRegion	The layer of the ionosphere that exists approximately 50 to 95 km above the surface of the Earth. One of several layers in the ionosphere.
	enumeration	Ionosphere.ERegion	A layer of ionised gas occurring at 90-150km above the ground. One of several layers in the ionosphere. Also called the The Kennelly-Heaviside layer.
	enumeration	Ionosphere.FRegion	A layer that contains ionized gases at a height of around 150-800 km above sea level, placing it in the thermosphere. the F region has the highest concentration of free electrons and ions anywhere in the atmosphere. It may be thought of as comprising two layers, the F1-and F2-layers. One of several layers in the ionosphere. Also known as the Appleton layer.
	enumeration	Ionosphere.Topside	The region at the upper most areas of the ionosphere.
	enumeration	Mesosphere	The layer of the atmosphere that extends from the Stratosphere to a range of 80 km to 85 km, temperature decreasing with height.
	enumeration	Plasmasphere	A region of the magnetosphere consisting of low energy (cool) plasma. It is located above the ionosphere. The outer boundary of the plasmasphere is known as the plasmapause, which is defined by an order of magnitude drop in plasma density.
	enumeration	PolarCap	The areas of the globe surrounding the poles and consisting of the region north of 60 degrees north latitude an the region south of 60 degrees south latitude.
	enumeration	SouthAtlanticAnomalyRegion	The region where the Earth's inner van Allen radiation belt makes its closest approach to the planet's surface. The result is that, for a given altitude, the radiation intensity is higher over this region than elsewhere.
	enumeration	Stratosphere	The layer of the atmosphere that extends from the troposphere to about 30 km, temperature increases with height. The stratosphere contains the ozone layer.
	enumeration	Thermosphere	The layer of the atmosphere that extends from the Mesosphere to 640+ km, temperature increasing with height.
	enumeration	Troposphere	The lowest layer of the atmosphere which begins at the surface and extends to between 7 km (4.4 mi) at the poles and 17 km (10.6 mi) at the equator, with some variation due to weather factors.

Simple Type enumSun

Namespace	http://impex-fp7.oeaw.ac.at
Annotations	Identifiers for regions of the star upon which our solar system is centered.
Diagram	Type	restriction of xsd:string

Facets

enumeration	Chromosphere	The region of the Sun's (or a star's) atmosphere above the temperature minimum and below the Transition Region. The solar chromosphere is approximately 400 km to 2100 km above the photosphere, and characterized by temperatures from 4500 - 28000 K.
enumeration	Corona	The outermost atmospheric region of the Sun or a star, characterized by ionization temperatures above 10^5 K. The solar corona starts at about 2100 km above the photosphere; there is no generally defined upper limit.
enumeration	Interior	The region inside the body which is not visible from outside the body.
enumeration	Photosphere	The atmospheric layer of the Sun or a star from which continuum radiation, especially optical, is emitted to space. For the Sun, the photosphere is about 500 km thick.
enumeration	TransitionRegion	A very narrow (<100 km) layer between the chromosphere and the corona where the temperature rises abruptly from about 8000 to about 500,000 K.

Attribute `InputValue / @Units`

Namespace	No namespace
Annotations	A description of the standardized measurement increments in which a value is specified. The description is represented as a mathematical phrase. Units should be represented by widely accepted representation. For example, units should conform to the International System of Units (SI) which is maintained by BIPM (Bureau International des Poids et Mesures (see <http://www.bipm.fr/>) when appropriate or use tokens like "Re" to represent units of the Radius of the Earth. Within a phrase the circumflex (^) is used to indicate a power, a star (*) is used to indicate multiplication and a slash (/) division. When symbols are not separated by a mathematical operator, multiplication is assumed. Symbols for base units can be found at: <http://www.bipm.fr/en/si/si_brochure/chapter2/2-1/#symbols> and those for common derived units can be found at: <http://www.bipm.fr/en/si/derived_units/2-2-2.html>

Attribute `InputValue / @UnitsConversion`

Namespace	No namespace
Annotations	The multiplicative factor for converting a unit into International System of Units (SI) units. The factor is expressed in the form "number > x", where "number" is a numerical value and "x" is the appropriate SI units. The basic SI units are Enumerated: m (meter), N (newton), kg (kilogram), Pa (pascal), s (second), Hz (hertz), A (ampere), V (volt), K (kelvin), W (watt), rad (radian), J (joule), sr (steradian), C (coulomb), T (tesla), ohm (ohm), mho (mho or seimens), H (henry), and F (farad). Two useful units which are not SI units are: degree (angle), and unitless (no units). An example is: "1.0E-5>T" which converts the units, presumable nT, to tesla. Another example is: "1.0e+3>m/s" which converts a velocity expressed in kilometers per second to meters per second.
